

CONTENTS

Preface

ix

1 GAUSSIAN ELIMINATION

1.1	Introduction	1
1.2	An Example of Gaussian Elimination	2
1.3	Matrix Notation and Matrix Multiplication	6
1.4	Gaussian Elimination = Triangular Factorization	17
1.5	Row Exchanges, Inverses, and Roundoff Errors	25
1.6	Band Matrices, Symmetric Matrices, and Applications	35
	Review Exercises	42

2 THE THEORY OF SIMULTANEOUS LINEAR EQUATIONS

2.1	Vector Spaces and Subspaces	44
2.2	The Solution of m Equations in n Unknowns	49
2.3	Linear Independence, Basis, and Dimension	56
2.4	The Four Fundamental Subspaces	64
2.5	Orthogonality of Vectors and Subspaces	75
2.6	Pairs of Subspaces and Products of Matrices	86
	Review Exercises	94

3 ORTHOGONAL PROJECTIONS AND LEAST SQUARES

3.1	Inner Products and Transposes	96
3.2	Projections onto Subspaces and Least Squares Approximations	104

3.3	Orthogonal Bases, Orthogonal Matrices, and Gram-Schmidt Orthogonalization	115
3.4	The Pseudoinverse and the Singular Value Decomposition	130
3.5	Weighted Least Squares	138
	Review Exercises	144

4 DETERMINANTS

4.1	Introduction	146
4.2	The Properties of the Determinant	148
4.3	Formulas for the Determinant	154
4.4	Applications of Determinants	162
	Review Exercises	169

5 EIGENVALUES AND EIGENVECTORS

5.1	Introduction	171
5.2	The Diagonal Form of a Matrix	181
5.3	Difference Equations and the Powers A^k	186
5.4	Differential Equations and the Exponential e^{At}	196
5.5	The Complex Case: Hermitian and Unitary Matrices	206
5.6	Similarity Transformations and Triangular Forms	221
	Review Exercises	229

6 POSITIVE DEFINITE MATRICES

6.1	Minima, Maxima, and Saddle Points	231
6.2	Tests for Positive Definiteness	237
6.3	Semidefinite and Indefinite Matrices; $Ax = \lambda Bx$	244
6.4	Minimum Principles and Rayleigh's Quotient	251
6.5	The Rayleigh-Ritz Principle and Finite Elements	260

7 COMPUTATIONS WITH MATRICES

7.1	Introduction	265
7.2	The Norm and Condition Number of a Matrix	266
7.3	The Computation of Eigenvalues	273
7.4	Iterative Methods for $Ax = b$	283

8 LINEAR PROGRAMMING AND GAME THEORY

8.1	Linear Inequalities	291
8.2	The Simplex Method	297

8.3	The Theory of Duality	309
8.4	Game Theory and the Minimax Theorem	319

APPENDIX A	LINEAR TRANSFORMATIONS, MATRICES, AND CHANGE OF BASIS	327
-------------------	--	-----

APPENDIX B	THE JORDAN FORM	335
-------------------	------------------------	-----

<i>References</i>	341
--------------------------	-----

<i>Solutions to Exercises</i>	343
--------------------------------------	-----

<i>Index</i>	369
---------------------	-----
