

CONTENTS

BASIC NOTATION.....	1
CHAPTER I. ABSTRACT GROUPS	
1. The concept of a group.....	3
Definition 1.	Examples 1-2.
2. Subgroup. Normal subgroup. Factor group.....	6
Definitions 2-4.	Examples 3-5.
3. Isomorphism. Automorphism. Homomorphism.....	9
Definitions 5-6.	Theorem 1. Examples 6-7.
4. Center. Commutator subgroup.....	13
Definitions 7-9.	Example 8.
5. Intersection and product of subgroups. Direct product.....	15
Definitions 10-10', 10*-10*'. Theorem 2.	Examples 9-10.
6. Commutative groups.....	19
CHAPTER II. TOPOLOGICAL SPACES	
7. The concept of a topological space.....	26
Definitions 11-12.	Examples 11-12.
8. Neighborhoods.....	28
Definition 13.	Theorem 3. Examples 13-14.
9. Homeomorphism. Continuous mapping.....	33
Definitions 14-15.	Theorems 4-5.
10. Subspace.....	35
Definition 16.	Examples 15-16.
11. Connectedness.....	38
12. Regularity. The second axiom of countability.....	39
Definitions 17-18.	Examples 17-18.
13. Compactness.....	42
Definition 19.	Theorems 6-9. Example 19.
14. Continuous functions.....	45
Definition 20.	Example 20.
15. Topological products.....	48
Definition 21.	Examples 21-22.
CHAPTER III. TOPOLOGICAL GROUPS	
16. The concept of a topological group.....	52
Definition 22.	
17. Systems of neighborhoods of the identity.....	54
Theorem 10.	Examples 23-25.
18. Subgroup. Normal subgroup. Factor group.....	57
Definitions 23-25.	Theorem 11. Examples 26-27.
19. Isomorphism. Automorphism. Homomorphism.....	62
Definitions 26-27.	Theorems 12-13. Examples 28-29.
20. The intersection and product of subgroups. Direct product.....	67
Definitions 28-28'.	Theorem 14. Example 30.
21. Infinite direct product.....	71
Definitions 29-29'.	Examples 31-32.
22. Connected and 0-dimensional groups.....	75
Theorems 15-17.	Examples 33-34.

23. Local properties. Local isomorphism.....	80
Definition 30. Theorem 18. Examples 35-36.	
CHAPTER IV. REPRESENTATIONS OF COMPACT TOPOLOGICAL GROUPS	
24. Continuous functions on a topological group.....	88
Theorem 19. Examples 37-38.	
25. Invariant integration.....	91
Definition 31. Theorems 20-21. Examples 39-40.	
26. Systems of functions and integral equations on a group.....	99
Theorem 22. Examples 41-42.	
27. Preliminary remarks about matrices.....	105
28. Orthogonality relations.....	110
Definitions 32-33. Theorems 23-26. Examples 43-44.	
29. The completeness of the system of irreducible representations.....	116
Theorems 27-30. Examples 45-46.	
CHAPTER V. COMMUTATIVE TOPOLOGICAL GROUPS	
30. Character groups.....	127
Definition 34. Theorem 31.	
31. Fundamental relations in the theory of characters.....	133
Definition 35. Theorems 32-35.	
32. Simple examples and preliminary considerations.....	139
Theorem 36. Example 47.	
33. Compact and discrete groups.....	144
Definition 36. Theorems 37-38. Examples 48-51.	
34. The direct sum for a group and for its character group.....	150
Theorem 39.	
35. Locally compact groups.....	153
Theorems 40-41. Example 52.	
36. Locally connected commutative groups.....	165
Theorems 42-44. Example 53.	
37. Topologized algebraic fields.....	171
Definition 37. Theorem 45. Example 54.	
CHAPTER VI. THE CONCEPT OF A LIE GROUP	
38. Lie groups.....	181
Definition 38. Example 55.	
39. One-parameter subgroups.....	184
Theorems 46-48.	
40. Invariance theorem.....	192
Theorem 49. Example 56.	
41. Subgroup and factor group.....	195
Theorems 50-51.	
42. Supplementary remarks about canonical coordinates.....	202
CHAPTER VII. THE STRUCTURE OF COMPACT TOPOLOGICAL GROUPS	
43. Approximation to compact groups by Lie groups.....	204
Definition 39. Theorems 52-54. Examples 57-58.	
44. Auxiliary topological concepts.....	209
Definitions 40-41.	
45. Compact topological groups of finite dimension.....	212
Theorems 55-57. Example 59.	
CHAPTER VIII. LOCALLY ISOMORPHIC GROUPS	
46. Fundamental group. Covering space.....	217
Definitions 42-43. Theorems 58-60.	

47. The universal covering group.....	225
Definition 44. Theorems 61-64. Examples 60-61.	
CHAPTER IX. THE STRUCTURE OF LIE GROUPS	
48. Structural constants. Infinitesimal groups.....	234
Definitions 45-46. Theorems 65-66. Examples 62-63.	
49. Subgroup. Factor group. Homomorphic mapping.....	240
Theorems 67-68. Examples 64-65.	
50. Integrability conditions.....	245
Theorem 69.	
51. The construction of Lie groups from structural constants.....	248
Theorems 70-73. Example 66.	
52. The construction of a subgroup and of a homomorphism.....	258
Theorems 74-76. Examples 67-68.	
53. Complex Lie groups. Classification.....	265
Theorems 77-82. Examples 69-72.	
54. The construction of a Lie group in the large.....	274
Theorems 83-85. Example 73.	
55. Compact Lie groups.....	279
Theorems 86-87. Example 74.	
56. Transformation groups.....	286
Definition 47. Theorem 88. Example 75.	
BIBLIOGRAPHY.....	295
INDEX OF TERMS.....	297
