Introduction.	1
1. Limit theorems for mixing sequences of random variables	3
1.1. The central problem	3
1.2. The central limit theorem with remainder and the law of the iterated logarithm	14
1.3. An extension of the law of the iterated logarithm	17
1.3.1. The upper bound	18
1.3.2. The lower bound	29
2. Limit theorems for continued fractions and related algorithms	37
3. Limit theorems in Diophantine approximation	42
3.1. Introduction.	42
3.2. Preliminaries	45
3.3. The asymptotic behavior of N^*	46
3.3.1. Preparatory remarks	46
3.3.2. The law of the iterated logarithm and the central limit theorem for the y_j 's and the z_j 's.	52
3.3.3. Proof of Theorem 3.1.2*	54
3.3.4. Proof of Theorem 3.1.1*	59
3.4. The asymptotic behavior of N	61
4. The law of the iterated logarithm for discrepancies of sequences uniformly distributed mod 1	65
4.1. The discrepancies of almost all sequences (in the sense of the infinite product measure).	65
4.2. The discrepancies of sequences of the type $\langle T^n x \rangle$	67
5. The distribution of additive functions.	73
5.1. Kubilius' fundamental lemma	73
5.2. Preparatory lemmas.	80
5.3. Limit theorems for additive functions of class H	86
5.4. A more direct method.	95
5.5. A result on uniform distribution.	95
References.	99
