TABLE OF CONTENTS

	Page
INTRODUCTION	1
CHAPTER I. CATEGORICAL PRELIMINARIES	6
1. Basic notions and localization	6
2. Fibrations	8
3. Hyperfunctors	11
4. Weak commutativity	13
CHAPTER II. HOMOTOPY THEORIES	17
1. Left and right homotopy theories	17
2. The standard example	18
3. Closed Quillen model categories	20
4. Model structure in K^C	22
5. $\underline{\Pi}$ as a homotopy theory	25
6. The standard theory via small categories	28
CHAPTER III. PROPERTIES OF HOMOTOPY THEORIES	32
1. Limits and weak limits	32
2. Computing with homotopy Kan extensions	34
3. Sequential homotopy colimits	37
4. Steenrod factorizations and the density theorem	40
5. Pointed homotopy theories	41
CHAPTER IV. TENSOR STRUCTURES	45
1. The functors $\tilde{\Theta}_G$	45
2. The functors Θ_G, Hom_G	48
3. Tensor and cotensor structure in homotopy theories	52
4. Tensor structure and homotopy limits	53
5. Regular homotopy theories	55
CHAPTER V. LOCALIZATION	57
1. Localization in a homotopy theory	57
2. Examples of localizations and colocalizations	62
3. Compact objects, the little Bousfield lemma and Brown's theorem	64
4. Uniform localization	66

CHAPTER VI. HOMOTOPICAL ALGEBRA 70

1. Universal algebra and homotopical algebra 70
2. Some simple cases 72
3. Homotopical groups 73
4. Homotopical multialgebras 74
