

Table of contents

1 Classical real variable

1.1 Set theory—a framework	13
1.2 The topology of $\mathbf{R}$	13
1.3 Classical real variable—motivation for the Lebesgue theory	19
1.3.1 Continuous functions	21
1.3.2 Sets of differentiability	26
1.4 References for the history of integration theory	31
Problems	32

2 Lebesgue measure and general measure theory

2.1 The theory of measure prior to Lebesgue, and preliminaries	38
2.2 The existence of Lebesgue measure	43
2.3 General measure theory	51
2.4 Approximation theorems for measurable functions	58
Problems	64

3 The Lebesgue integral

3.1 Motivation	72
3.2 The Lebesgue integral	75
3.3 The Lebesgue dominated convergence theorem	82
3.4 The Riemann and Lebesgue integrals	92
3.5 Some fundamental applications	98
Problems	101

A 3.1 Sets of uniqueness and measure zero	113
---	-----

4 The relationship between differentiation and integration on $\mathbf{R}$

4.1 Functions of bounded variation and associated measures	118
4.2 Decomposition into discrete and continuous parts	126
4.3 The Lebesgue differentiation theorem	132
4.4 FTC-I	138
4.5 Absolute continuity and FTC-II	143
4.6 Absolutely continuous functions	146
Problems	151

5 Spaces of measures and the Radon–Nikodym theorem	
5.1 Signed and complex measures, and the basic decomposition theorems	163
5.2 Discrete and continuous, absolutely continuous and singular measures	174
5.3 The Vitali–Lebesgue–Radon–Nikodym theorem	180
5.4 The relation between set and point functions	187
5.5 $L_p(X)$, $1 \leq p \leq \infty$	192
Problems	198
A 5.1 The Radon–Nikodym theorem: historical notes on Lusin’s problem and Vitali	208
6 Weak convergence of measures	
6.1 Vitali’s theorems	211
6.2 The Nikodym and Hahn–Saks theorems	216
6.3 Weak convergence of measures	224
A 6.1 Vitali	229
Appendices	
I Metric spaces and Banach spaces	
I.1 Definitions of spaces	230
I.2 Examples	232
I.3 Separability	235
I.4 Moore–Smith and Arzelà–Ascoli theorems	236
I.5 Uniformly continuous functions	238
I.6 Baire category theorem	239
I.7 Uniform boundedness principle	242
I.8 Hahn–Banach theorem	244
I.9 The weak and weak * topologies	246
I.10 Linear maps	249
II Fubini’s theorem	
III The Riesz representation theorem (RRT)	
III.1 Riesz’s representation theorem	255
III.2 RRT	257
III.3 Radon measures	258
III.4 Radon measures and countably additive set functions	260
III.5 Support and the approximation theorem	262
III.6 Haar measure	263
Bibliography	267
Index of proper names	272
Index of terms	275
