

CONTENTS

Introduction	1
1. Continuous selections	3
2. Continuous selections on metric continuum	14
3. Continuous selections and solutions of generalised differential equations.	24
4. Measurable selections and an application to stochastic games.	35
5. General theorems on selectors	49
6. Two applications of measurable selections	58
7. von-Neumann's measurable choice theorem	65
8. On the uniformization of sets in topological spaces	76
9. Supplementary remarks on selection theorems	85
