

TABLE OF CONTENTS

1. Introduction	1
<u>CHAPTER I. RIESZ SPACES AND ELEMENTARY INTEGRALS</u>	
2. Vector lattices	12
3. Riesz spaces of measures	24
4. Dominated integration lattices	40
5. The $\mathcal{Q}$ -uniformity	51
6. Scalar measures on full integration domains	65
<u>CHAPTER II. UPPER GAUGES AND EXTENSION THEORY</u>	
§1. UPPER S-NORMS AND UPPER GAUGES	
7. Upper S-norms	73
8. Upper gauges	83
9. The standard upper integrals	94
§2. INTEGRATION OF VECTOR-VALUED FUNCTIONS	
10. Extension under an upper norm	104
11. Extension of linear maps	116
§3. VARIOUS NEW UPPER GAUGES	
12. The p-norms ($1 \leq p < \infty$)	129
13. Essential upper gauges	138
14. Smooth upper gauges	143
15. The upper integral AM	147
16. Strictly localizable upper gauges	156
17. Bauer's theory	161
<u>CHAPTER III. MEASURABILITY</u>	
§1. MEASURABLE FUNCTIONS AND SETS	
18. $(\mathcal{R}, M)$ -measurability	165
19. Integrability and measurability criteria	176
20. The spaces $\mathcal{L}_E^\infty$ and L_E^∞	185
§2. RELATIONS BETWEEN SPACES OF MEASURABLE FUNCTIONS	
21. Relations between the L^p ($1 \leq p \leq \infty$)	190
22. The theorem of Radon-Nikodym	197
23. The Riesz-Thorin convexity theorem	204
24. L. Schwartz's tight measures	209

CHAPTER IV. ELEMENTARY OPERATIONS ON MEASURE SPACES.

§1. FIELDS OF MEASURES AND OF UPPER GAUGES

25. Integrable fields	223
26. Adequate fields	233
27. Products of elementary integrals	237

§2. IMAGES OF MEASURES

28. Adequate and adapted maps	244
29. Conditional expectation	252

§3. PROJECTIVE LIMITS

30. Projective systems	258
31. Martingale theorems	268
32. Infinite products of positive measures	283
33. Probability	293

CHAPTER V. LIFTINGS AND DERIVATIVES

§1. LIFTINGS

34. Liftings and dense topologies	300
35. Existence of liftings	312
36. Disintegration of measures	319

§2. INTEGRAL REPRESENTATION OF LINEAR MAPS

37. Radon-Nikodym theorems	327
38. Linear maps on L_E^p	339
