<i>Translator's Note</i>	v
--------------------------	---

<i>Preface</i>	vii
----------------	-----

Chapter I: Three Types of Complex Numbers

1. Ordinary Complex Numbers	1
2. Generalized Complex Numbers	7
3. The Most General Complex Numbers	10
4. Dual Numbers	14
5. **Double Numbers	18
6. **Hypercomplex Numbers	22

Chapter II: Geometrical Interpretation of Complex Numbers

7. Ordinary Complex Numbers as Points of a Plane	26
8. *Applications and Examples	34
9. Dual Numbers as Oriented Lines of a Plane	80
10. *Applications and Examples	95
11. **Interpretation of Ordinary Complex Numbers in the Lobachevskii Plane	108
12. **Double Numbers as Oriented Lines of the Lobachevskii Plane	118

Chapter III: *Circular Transformations and Circular Geometry*

13. Ordinary Circular Transformations (Möbius Transformations)	130
14. *Applications and Examples	145
15. Axial Circular Transformations (Laguerre Transformations)	157
16. *Applications and Examples	171
17. **Circular Transformations of the Lobachevskii Plane	179
18. **Axial Circular Transformations of the Lobachevskii Plane	188

Appendix: *Non-Euclidean Geometries in the Plane and Complex Numbers*

A1. Non-Euclidean Geometries in the Plane	195
A2. Complex Coordinates of Points and Lines of the Plane Non-Euclidean Geometries	205
A3. Cycles and Circular Transformations	212

Addenda	220
