

Contents

Chapter 1		
Riemannian Geometry		
§1. Introduction to Differential Geometry		1
1.1 Tangent Space		2
1.2 Connection		3
1.3 Curvature		3
§2. Riemannian Manifold		4
2.1 Metric Space		5
2.2 Riemannian Connection		6
2.3 Sectional Curvature. Ricci Tensor. Scalar Curvature		6
2.4 Parallel Displacement. Geodesic		8
§3. Exponential Mapping		9
§4. The Hopf–Rinow Theorem		13
§5. Second Variation of the Length Integral		15
5.1 Existence of Tubular Neighborhoods		15
5.2 Second Variation of the Length Integral		15
5.3 Myers’ Theorem		16
§6. Jacobi Field		17
§7. The Index Inequality		18
§8. Estimates on the Components of the Metric Tensor		20
§9. Integration over Riemannian Manifolds		23
§10. Manifold with Boundary		25
10.1. Stokes’ Formula		26
§11. Harmonic Forms		26
11.1. Oriented Volume Element		26
11.2. Laplacian		27
11.3. Hodge Decomposition Theorem		29
11.4. Spectrum		31
Chapter 2		
Sobolev Spaces		
§1. First Definitions		32
§2. Density Problems		33
§3. Sobolev Imbedding Theorem		35
§4. Sobolev’s Proof		37

§5. Proof by Gagliardo and Nirenberg	38
§6. New Proof	39
§7. Sobolev Imbedding Theorem for Riemannian Manifolds	44
§8. Optimal Inequalities	50
§9. Sobolev's Theorem for Compact Riemannian Manifolds with Boundary	50
§10. The Kondrakov Theorem	53
§11. Kondrakov's Theorem for Riemannian Manifolds	55
§12. Examples	56
§13. Improvement of the Best Constants	57
§14. The Case of the Sphere	61
§15. The Exceptional Case of the Sobolev Imbedding Theorem	63
§16. Moser's Results	65
§17. The Case of the Riemannian Manifolds	67
§18. Problems of Traces	69

Chapter 3

Background Material

§1. Differential Calculus	70
1.1. The Mean Value Theorem	71
1.2. Inverse Function Theorem	72
1.3. Cauchy's Theorem	72
§2. Four Basic Theorems of Functional Analysis	73
2.1. Hahn–Banach Theorem	73
2.2. Open Mapping Theorem	73
2.3. The Banach–Steinhaus Theorem	73
2.4. Ascoli's Theorem	74
§3. Weak Convergence. Compact Operators	74
3.1. Banach's Theorem	74
3.2. The Leray–Schauder Theorem	74
3.3. The Fredholm Theorem	75
§4. The Lebesgue Integral	75
4.1. Dominated Convergence Theorem	76
4.2. Fatou's Theorem	77
4.3. The Second Lebesgue Theorem	77
4.4. Rademacher's Theorem	77
4.5. Fubini's Theorem	78
§5. The L_p Spaces	78
5.1. Regularization	80
5.2. Radon's Theorem	81
§6. Elliptic Differential Operators	83
6.1. Weak Solution	84
6.2. Regularity Theorems	85
6.3. The Schauder Interior Estimates	88
§7. Inequalities	88
7.1. Hölder's Inequality	88
7.2. Clarkson's Inequalities	89
7.3. Convolution Product	89

7.4. The Calderon–Zygmund Inequality	90
7.5. Korn–Lichtenstein Theorem	90
7.6. Interpolation Inequalities	93
§8. Maximum Principle	96
8.1. Hopf's Maximum Principle	96
8.2. Uniqueness Theorem	96
8.3. Maximum Principle for Nonlinear Elliptic Operator of Order Two	97
8.4. Generalized Maximum Principle	98
§9. Best Constants	99
9.1. Application to Sobolev Spaces	100

Chapter 4

Green's Function for Riemannian Manifolds

§1. Linear Elliptic Equations	101
1.1. First Nonzero Eigenvalue λ of Δ	101
1.2. Existence Theorem for the Equation $\Delta\varphi = f$	104
§2. Green's Function of the Laplacian	106
2.1. Parametrix	106
2.2. Green's Formula	107
2.3. Green's Function for Compact Manifolds	108
2.4. Green's Function for Compact Manifolds with Boundary	112

Chapter 5

The Methods

§1. Yamabe's Equation	115
1.1. Yamabe's Method	115
§2. Berger's Problem	119
2.1. The Positive Case	121
§3. Nirenberg's Problem	122
3.1. A Nonlinear Theorem of Fredholm	122
3.2. Open Questions	124

Chapter 6

The Scalar Curvature

§1. The Yamabe Problem	125
1.1. Yamabe's Functional	126
1.2. Yamabe's Theorem	126
§2. The Positive Case	129
2.1. Geometrical Applications	132
2.2. Open Questions	134
§3. Other Problems	135
3.1. Topological Meaning of the Scalar Curvature	135
3.2. Kazdan and Warner's Problem	136

Chapter 7

Complex Monge–Ampère Equation on Compact Kähler Manifolds

§1. Kähler Manifolds	139
1.1 First Chern Class	140
1.2. Change of Kähler Metrics. Admissible Functions	141
§2. Calabi's Conjecture	142
§3. Einstein–Kähler Metrics	143
§4. Complex Monge–Ampère Equation	144
4.1. About Regularity	144
4.2. About Uniqueness	144
§5. Theorem of Existence (the Negative Case)	145
§6. Existence of Kähler–Einstein Metric	146
§7. Theorem of Existence (the Null Case)	147
§8. Proof of Calabi's Conjecture	150
§9. The Positive Case	150
§10. A Priori Estimate for $\Delta\varphi$	150
§11. A Priori Estimate for the Third Derivatives of Mixed Type	153
§12. The Method of Lower and Upper Solutions	154

Chapter 8

Monge–Ampère Equations

§1. Monge–Ampère Equations on Bounded Domains of \mathbb{R}^n	157
1.1. The Fundamental Hypothesis	157
1.2. Extra Hypothesis	158
1.3. Theorem of Existence	159
§2. The Estimates	160
2.1. The First Estimates	160
2.2. C^2 -Estimate	161
2.3. C^3 -Estimate	164
§3. The Radon Measure $\mathcal{M}(\varphi)$	169
§4. The Functional $\mathcal{J}(\varphi)$	174
4.1. Properties of $\mathcal{J}(\varphi)$	174
§5. Variational Problem	179
§6. The Complex Monge–Ampère Equation	182
6.1. Bedford's and Taylor's Results	182
6.2. The Measure $\mathfrak{M}(\varphi)$	183
6.3. The Functional $\mathfrak{J}(\varphi)$	183
6.4. Some Properties of $\mathfrak{J}(\varphi)$	183
§7. The Case of Radially Symmetric Functions	184
7.1. Variational Problem	185
7.2. An Open Problem	186
§8. A New Method	186
Bibliography	189
Subject Index	199
Notation	203
