	List of Figures	XIII
	List of Tables.....	XVII
	Preface	XIX
	Acknowledgments	XXIII
	About the Author	XXV
1	Manufacturing Control	1
	1.1 Production Processes	2
	1.1.1 Batch Manufacturing	3
	1.1.2 Continuous Manufacturing	3
	1.1.3 Discrete Manufacturing	4
	1.2 ISA 88 Productivity Increases	4
	1.3 S88 and NS88 Design Patterns	5
	1.4 Reading This Book	6
2	Design Patterns	11
	2.1 Class Diagrams	12
	2.2 State Diagrams	14
	2.3 Sequence Diagrams	15
3	Recipe/Equipment Separation	17
	3.1 Control Types	18
	3.2 Recipes	20
	3.2.1 Recipe Elements	21
	3.2.2 Recipe Types	22
	3.2.3 Recipe/Equipment Sequence	26
	3.2.4 Nonproduct Recipes	26

3.3	Equipment	28
3.3.1	Enterprise	29
3.3.2	Site	29
3.3.3	Area	29
3.3.4	Production Line	29
3.3.5	Production Unit	30
3.3.6	Storage Zone	30
3.3.7	Work Center	30
3.3.8	Equipment Structure for Recipe Control	31
3.3.9	Process Cell	31
3.3.10	Units	34
3.3.11	Equipment Phases	35
3.3.12	Equipment Tags	36
3.4	Campaigns	38
3.5	Trains	39
3.6	Summary	40

4 Master and Control Recipe Procedures.....41

4.1	Recipe Procedure Hierarchy	42
4.1.1	Unit Procedures	42
4.1.2	Unit Recipes	43
4.1.3	Operations	44
4.1.4	Recipe Phases	44
4.1.5	Recipe Procedure Collapsing and Expansion	46
4.2	Recipe Procedure Diagrams	48
4.2.1	PFC Diagrams	48
4.2.2	Equipment Allocation Control	50
4.2.3	Unit-to-Unit Material Transfers and Synchronization	52
4.3	Control Recipes	53
4.4	How Much in the Recipe, How Much in the Equipment	54
4.5	Modes, States, and Commands	57
4.5.1	States	57
4.5.2	Commands	58
4.5.3	Modes	60
4.6	Just a Calculation Phase	64
4.7	Summary	65

5 S88 Pattern for Automated Equipment.....67

5.1	Process Cells	71
5.1.1	Process Cell Coordination Control	72
5.1.2	Recipe Procedural Control	74
5.1.3	Process Cell Data Collection	76
5.1.4	Design Pattern Rules for S88 Process Cells	77

5.2	Units	78
5.2.1	Unit Boundary Example	80
5.2.2	Unit Coordination Control	81
5.2.3	Unit Recipe Procedural Control	87
5.2.4	Unit Data Collection and Manual Interface	89
5.2.5	Unit Classes	90
5.2.6	Design Pattern Rules for S88 Units	91
5.3	Equipment Modules	91
5.3.1	Equipment Phase Modes and States	93
5.3.2	Equipment Module States and Modes	96
5.3.3	Equipment Module Control	97
5.3.4	Equipment Module Example	102
5.3.5	Phases for Calculations and Communications	102
5.3.6	Bumpless Control Using Phases	104
5.3.7	Design Pattern Rules for S88 Equipment Modules	107
5.4	Control Modules	107
5.4.1	Control Module Modes and States	110
5.4.2	Common Control Module Logic	112
5.4.3	Complex Control Modules	115
5.4.4	Control Module Libraries	115
5.5	Why Equipment Modules and Control Modules?	116
5.6	Material Transfers	119
5.6.1	Simple Transfer Pattern	120
5.6.2	Header Transfer Pattern	120
5.7	Summary	125

6 Patterns for Manual Operations.....129

6.1	Recipe-Equipment Separation	129
6.2	SOPs in Manual	130
6.3	Equipment Phase to MPP Mapping	133
6.4	Map MPPs to Equipment	133
6.5	Unit with No Fixed Equipment	134
6.6	Don't Put SOP Text into Recipes	135
6.7	MPP Instructions	135
6.8	Equipment Phases	136
6.9	Procedure Automation and Manual Operations	137
6.10	Incremental Automation	140
6.10.1	Control Step Incremental Automation	141
6.10.2	Equipment Phase Incremental Automation	142
6.10.3	Unit Incremental Automation	142
6.11	Summary	142

7	Nonstop Production	145
7.1	Nonstop Production Examples	147
7.2	Nonstop Production Lines	147
7.3	NS88 Unit Pattern	150
7.4	NS88 Phase State Model	154
7.5	General-Purpose Equipment State and Model	154
7.6	NS88 Filling Unit Example	155
7.7	Applying the NS88 Design Pattern	156
7.7.1	Nonstop Product Switchover	158
7.7.2	Batch B1 Finishing Fill	160
7.7.3	Batch B2 Starting Fill	161
7.7.4	Batch B2 Finishing Coating	162
7.7.5	Finished Product Switchover	162
7.8	Generating the Right NS88 Batch Record	164
7.9	Special Situations	165
7.9.1	High Speed Material Flow	165
7.9.2	Cannot Detect the End of Batch	166
7.9.3	Cleaning Lines	167
7.9.4	Line Startup and Shutdown	168
7.9.5	Clearing Units	169
7.9.6	Sizing the Units	170
7.9.7	When You Just Have to Stop	170
7.10	Switching Conveyor Lines and Valve Arrays	172
7.10.1	One-to-Many and Many-to-One Paths	175
7.10.2	Many-to-Many Material Switches	177
7.10.3	Multiple Switching Paths	177
7.10.4	Switching Units	179
7.11	Summary	180
8	Continuous Production Processes	183
8.1	Continuous Production Example	184
8.2	Continuous Production Design Pattern	184
8.3	Continuous Unit Partitioning and Recipes	185
8.4	NS88 Continuous Production Product Switchover	187
8.5	Continuous Startup and Shutdown	190
8.6	Continuous Production Valve Arrays	190
8.7	NS88 Continuous Production Summary	191

9	Splitting and Merging Batches.....	193
9.1	Splitting and Merging Design Pattern	195
9.2	Recipes for Splitting and Merging Batches	196
9.2.1	Merge Batches	196
9.2.2	Splitting Batches	196
9.3	Transferring Materials	197
10	Summary.....	199
	Index	203

4-17	Propagation of a recipe hold.	58
4-17	Propagation of a recipe hold.	60
4-19	Propagation of an equipment-initiated stop.....	61
4-20	Stop sequence.	61
4-21	Procedural element modes.	62
4-22	Semiautomatic operator control.	63
4-23	Procedural element states and modes.	64
5-1	Types of control in automated systems.	68
5-2	Some interactions of types of control.	70
5-3	Automated control design pattern.	70
5-4	Objects for automated control.	71
5-5	Process cell structure.....	73
5-6	Design pattern elements of a unit.....	79
5-7	A three-unit process cell.	80
5-8	Unit boundaries.	82
5-9	Shared equipment modules and control modules.....	83
5-10	One-to-one unit to equipment module phase mapping.	84
5-11	Equipment modules with multiple phases.	84
5-12	General-purpose charge phase.	85
5-13	Unit recipe procedural control.	88
5-14	Unit class example.....	90
5-15	Equipment module structure.	93
5-16	Typical equipment modules.....	94
5-17	Sample equipment module hierarchy.....	94
5-18	Sample equipment phase state and mode model.	95
5-19	Equipment module pattern.....	96
5-20	Sample equipment state.	97
5-21	Complex equipment module states.	97
5-22	Equipment module procedure control functions.	98
5-23	Equipment module with multiple phases.....	99
5-24	SFC procedure diagram.....	100
5-25	Equipment module EM53-E.	103
5-26	Calculations performed in a shared equipment module.	103
5-27	Sequence diagram for communication phases.	105
5-28	Environmental phases crossing operation boundaries.	105
5-29	Environment control using persistent actions.....	106
5-30	Control modules within Unit U53.....	110
5-31	All low-level control modules within a process cell.	111
5-32	Sample control module state models.....	111
5-33	Sample states for a valve.....	113

5-34	Control modules, the lowest-level of the equipment hierarchy.....	113
5-35	Sample valve control module representation.....	113
5-36	The equipment and control module pattern.....	118
5-37	Simple material transfer paths.....	119
5-38	Transfer phases in units.....	121
5-39	Single-use and multiple-use header transfers.....	121
5-40	Sample complex switching equipment module.....	123
5-41	Control hierarchy and equipment hierarchy.....	127
6-1	Recipe and equipment phases.....	131
6-2	Manual execution of equipment phases.....	131
6-3	Objects in manual operations.....	133
6-4	Mapping SOPs to units.....	134
6-5	MPP instructions.....	136
6-6	Basic pattern for manual interactions.....	139
6-7	Control action automation.....	141
6-8	A unit with manual and automated phases.....	143
7-1	Electronic board assembly.....	146
7-2	Nonstop continuous production.....	148
7-3	Production runs in continuous production.....	148
7-4	NS88 rules.....	150
7-5	The NS88 Design Pattern.....	151
7-6	End-of-batch detection and propagation.....	153
7-7	Example phase state model.....	154
7-8	General-purpose NS88 equipment state model.....	156
7-9	NS88 pattern for a filling unit.....	159
7-10	Sample nonstop work center.....	159
7-11	Sample recipe for a nonstop process cell.....	160
7-12	Time T1 with one batch running.....	160
7-13	Time T2 with new batch approaching.....	161
7-14	Time T3 product switchover in FILL #1.....	162
7-15	Time T4 product switchover in COAT #1.....	163
7-16	Time T5 product switchover complete.....	163
7-17	Using reporting units to report on a batch.....	165
7-18	Early detection of EOB.....	167
7-19	Sequence diagram for EOB detection and calculation.....	167
7-20	Using a cleaning recipe between products.....	168
7-21	Sample startup recipe.....	169
7-22	Example of a buffering unit.....	171
7-23	Buffering in a discrete process.....	171
7-24	HOLD sequence diagram for units with buffers.....	172
