Preface	x
1 Fourier series, integral theorem, and transforms: a review	1
1.1 Fourier series	2
1.2 Fourier exponential series	3
1.3 The Fourier integral theorem	6
1.4 Odd and even functions	8
1.5 The Fourier transform	8
1.6 The Fourier sine and cosine transforms	11
1.7 The Laplace transform	11
1.8 Laplace transform properties and pairs	13
1.9 Transfer functions and convolution	19
Summary	21
Problems	21
2 The Fourier transform. Convolution of analogue signals	25
2.1 Duality	26
2.2 Further properties of the Fourier transform	28
2.3 Comparison with the Laplace transform, and the existence of the Fourier transform	32
2.4 Transforming using a limit process	33
2.5 Transformation and inversion using duality and other properties	35
2.6 Some frequently occurring functions and their transforms	37

2.7	Further Fourier transform pairs	42
2.8	Graphical aspects of convolution	44
	Summary	51
	Problems	51
3	Discrete signals and transforms.	
	The Z-transform and discrete convolution	54
3.1	Sampling, quantization and encoding	55
3.2	Sampling and 'ideal' sampling models	56
3.3	The Fourier transform of a sampled function	57
3.4	The spectrum of an 'ideally sampled' function	59
3.5	Aliasing	60
3.6	Transform and inversion sums; truncation	62
3.7	Windowing: band-limited signals and signal energy	67
3.8	The Laplace transform of a sampled signal	72
3.9	The Z-transform	72
3.10	Input-output systems and transfer functions	74
3.11	Properties of the Z-transform	75
3.12	Z-transform pairs	78
3.13	Inversion	79
3.14	Discrete convolution	82
	Summary	85
	Problems	86
4	Difference equations and the Z-transforms	91
4.1	Forward and backward difference operators	92
4.2	The approximation of a differential equation	92
4.3	Ladder networks	93
4.4	Bending in beams: trial methods of solution	94
4.5	Transforming a second-order forward difference equation	96
4.6	The characteristic polynomial and the terms to be inverted	97
4.7	The case when the characteristic polynomial has real roots	99
4.8	The case when the characteristic polynomial has complex roots	101
4.9	The case when the characteristic equation has repeated roots	105
4.10	Difference equations of order $N > 2$	107

4.11 A backward difference equation	109
4.12 A second-order equation: comparison of the two methods	111
Summary	113
Problems	113
5 The discrete Fourier transform	117
5.1 Approximating the exponential Fourier series	118
5.2 Definition of the discrete Fourier transform	120
5.3 Establishing the inverse	121
5.4 Inversion by conjugation	126
5.5 Properties of the discrete Fourier transform	129
5.6 Discrete correlation	132
5.7 Parseval's theorem	133
5.8 A note on sampling in the frequency domain, and a further comment on window functions	134
5.9 Computational effort and the discrete Fourier transform	135
Summary	136
Problems	137
6 Simplification and factorization of the discrete Fourier transform matrix	141
6.1 The coefficient matrix for an eight-point discrete Fourier transform	142
6.2 The permutation matrix and bit-reversal	144
6.3 The output from four two-point discrete Fourier transforms	144
6.4 The output from two four-point discrete Fourier transforms	145
6.5 The output from an eight-point discrete Fourier transform	148
6.6 'Butterfly' calculations	151
6.7 'Twiddle' factors	152
6.8 Economies	154
Summary	154
Problems	155

7 Fast Fourier transforms	156
7.1 Fast Fourier transform algorithms	157
7.2 Decimation in time for an eight-point discrete Fourier transform: first stage	158
7.3 The second stage: further periodic aspects	159
7.4 The third stage	161
7.5 Construction of a flow graph	162
7.6 Inversion using the same decimation-in-time signal flow graph	168
7.7 Decimation in frequency for an eight-point discrete Fourier transform	169
Summary	176
Problems	176
Appendix A: The Fourier integral theorem	178
Appendix B: The Hartley transform	180
Appendix C: Further reading	184
Index	185
