

## **Figure and table legends**

Fig. 1	The diathesis-stress-model used in the empirical studies: Factors which may influence psychobiological adaptation in air rescue workers.....	33
Fig. 2	Prevalence rates of PTE, of most disturbing events meeting the situational criterion (A1) and of most disturbing events additionally meeting the emotional response criterion (stressor criterion A met) were comparable between men and women, but men and women differed in their subjective appraisal of traumatic events.....	44
Fig. 3	Regression lines for relations between health components of SWB and HPA axis response as moderated by gender.....	50

Table 1	Demographic characteristics of all participants classified by gender .....	43
Table 2	Significant gender differences in psychosocial demands and resources.....	45
Table 3	Gender differences in characteristics of adaptation .....	46
Table 4	Post-hoc probing of significant moderational effects of gender on associations between demands, resources or adaptation with professional experience or age .....	47
Table 5	Hierarchical regressions of the moderating effect of gender on components of SWB .....	49
Table 6	Demographic characteristics of all participants by crews.....	63
Table 7	Psychosocial demands and resources, ranked by portion of possible maximum score attained by mean value.....	65
Table 8	Assessments of components of SWB and their cut-off values for the score .....	67
Table 9	Factors which discriminate the two groups of SWB .....	68
Table 10	Descriptive statistics for PDS outcome variables and distribution of cortisol measures in nmol/l .....	69

# Contents

<b>1</b>	<b>Introduction.....</b>	<b>1</b>
<b>1.1</b>	<b>Stress theories .....</b>	<b>3</b>
1.1.1	A diathesis-stress model of adaptation.....	5
<b>1.2</b>	<b>Psychobiological adaptation to chronic stress and trauma .....</b>	<b>5</b>
1.2.1	Posttraumatic stress disorder .....	6
1.2.1.1	<i>Definitions and clinical presentation.....</i>	6
1.2.1.2	<i>Risk factors for posttraumatic stress disorder .....</i>	7
1.2.1.3	<i>Epidemiology and gender differences in posttraumatic stress disorder .....</i>	7
1.2.2	Subjective well-being and health .....	9
1.2.2.1	<i>Gender differences in health and well-being: social structural, behavioral and psychosocial determinants .....</i>	10
1.2.3	The neuroendocrine stress response.....	12
<b>1.3</b>	<b>Psychosocial demands: Theories and definitions .....</b>	<b>13</b>
1.3.1	Differentiation between chronic and traumatic stress exposure .....	14
1.3.2	Job demands, physical stressors and the model of effort-reward imbalance .....	14
<b>1.4</b>	<b>Psychosocial resources: Theories and definitions .....</b>	<b>15</b>
1.4.1	Organizational, social and personal resources at work .....	16
1.4.2	Social support .....	17
1.4.3	Coping strategies .....	18
1.4.3.1	<i>Substance use.....</i>	18
1.4.3.2	<i>Physical activity .....</i>	19
1.4.3.3	<i>Recovery.....</i>	20
1.4.4	Personality traits .....	21
1.4.4.1	<i>Sense of Coherence.....</i>	21
1.4.4.2	<i>Self-efficacy and externality .....</i>	22
1.4.4.3	<i>Self-esteem and mastery.....</i>	23

<b>1.5 Professional activities of air rescue workers and stress factors specific to air transport, search and rescue and health care.....</b>	<b>24</b>
1.5.1 Stress factors affecting the rescue workers in general .....	24
1.5.1.1 <i>Task structure</i> .....	24
1.5.1.2 <i>Interaction structure</i> .....	27
1.5.1.3 <i>Organizational structure</i> .....	27
1.5.2 Occupational demands of health care workers.....	28
1.5.3 Flight stressors and challenges.....	28
1.5.4 Practice of operation controllers .....	29
1.5.5 Air-ambulance (jet) crew practice.....	30
1.5.6 Helicopter crew practice.....	31
<b>1.6 Summary of the presented literature and theoretical framework for the experimental design.....</b>	<b>31</b>
<b>2 Does gender influence psychobiological stress reactions in air rescue workers? .....</b>	<b>34</b>
2.1 <b>Introduction .....</b>	<b>34</b>
2.2 <b>Methods.....</b>	<b>37</b>
2.2.1 Participants and procedure .....	37
2.2.2 Psychometric assessments .....	38
2.2.3 Cortisol assessment.....	41
2.2.4 Data analyses .....	41
2.3 <b>Results.....</b>	<b>43</b>
2.3.1 Demographic results.....	43
2.3.2 Gender differences in demands, resources and in psychobiological adaptation .....	44
2.3.3 Gender moderated perceptions of demands, resources and adaptation dependent of professional experience and age.....	47

2.3.4	Gender moderation on associations between biological and psychological adaptation .....	48
<b>2.4</b>	<b>Discussion .....</b>	<b>49</b>
<b>3</b>	<b>Individual and work-related psychobiological characteristics contributing to subjective well-being in air rescue workers.....</b>	<b>55</b>
<b>3.1</b>	<b>Introduction .....</b>	<b>55</b>
<b>3.2</b>	<b>Methods.....</b>	<b>58</b>
3.2.1	Participants and procedure .....	58
3.2.2	Study protocol.....	58
3.2.3	Measurements .....	59
3.2.3.1	<i>Dependent variables .....</i>	59
3.2.3.2	<i>Independent variables .....</i>	60
3.2.4	Statistical analysis .....	62
<b>3.3</b>	<b>Results.....</b>	<b>63</b>
3.3.1	Demographic results.....	63
3.3.2	Psychosocial demands and resources.....	64
3.3.3	Subjective well-being.....	67
3.3.4	Posttraumatic stress disorder .....	69
3.3.5	Cortisol response.....	69
<b>3.4</b>	<b>Discussion .....</b>	<b>71</b>
<b>4</b>	<b>General discussion .....</b>	<b>76</b>
<b>4.1</b>	<b>Summary of the experimental studies .....</b>	<b>76</b>
4.1.1	Overview of univariate results .....	76
4.1.2	Comparisons of gender and crew types on demographic characteristics.....	77
4.1.3	Gender differences in demands, resources and psychobiological adaptation .....	77

4.1.4	The moderating role of gender on changes in individual perceptions of demands, resources and adaptation with professional experience and age .....	78
4.1.5	The moderating role of gender on associations between biological and psychological adaptation to stress .....	79
4.1.6	Individual and work-related predictors of adaptation to chronic and traumatic stress .....	79
4.1.6.1	<i>Discriminants of high and low subjective well-being</i> .....	79
4.1.6.2	<i>Predictors of adaptation to traumatic stress</i> .....	80
4.1.6.3	<i>Predictors of biological adaptation</i> .....	80
4.1.7	Differences between operations controlling, jet and helicopter crews with respect to demands, resources and adaptation to chronic stress and trauma .....	80
4.1.8	Conclusion .....	81
<b>4.2</b>	<b>Discussion of the results</b> .....	<b>82</b>
4.2.1	Univariate results .....	82
4.2.2	Demographic characteristics of the sample .....	83
4.2.3	Gender and age differences .....	83
4.2.4	Gender and years on duty.....	85
4.2.5	Gender differences in HPA axis response .....	86
4.2.6	Psychiatric morbidity and gender-specific endocrine reactions to Dexamethasone ....	86
4.2.7	Predictors of psychobiological adaptation to stress and trauma .....	87
4.2.8	Contribution of job characteristics to posttraumatic stress disorder.....	87
<b>4.3</b>	<b>Outlook</b> .....	<b>88</b>
<b>5</b>	<b>References</b> .....	<b>90</b>
