

TABLE OF CONTENTS

Preface and General Introduction.....	1
Chapter 1. Modeling Considerations.....	4
1.1 Basic hypotheses.....	6
1.2 Redistribution processes.....	8
1.3 Boundaries and interfaces.....	17
1.4 Reactions with migration.....	19
1.5 The reaction mechanism.....	24
1.6 Positivity of the density.....	29
1.7 Homogeneous systems.....	30
1.8 Modeling the rate functions.....	33
1.9 Colony models.....	37
1.10 Simplifying the model by means of asymptotics.....	42
Chapter 2. Fisher's Nonlinear Diffusion Equation and Selection-Migration Models.....	53
2.1 Historical overview.....	53
2.2 Assumptions for the present model.....	58
2.3 Reduction to a simpler model.....	62
2.4 Comments on the comparison of models.....	64
2.5 The question of formal approximation.....	66
2.6 The case of a discontinuous carrying capacity.....	67
2.7 Discussion.....	72
Chapter 3. Formulation of Mathematical Problems.....	73
3.1 The standard problems.....	73
3.2 Asymptotic states.....	75
3.3 Existence questions.....	82
Chapter 4. The Scalar Case.....	84
4.1 Comparison methods.....	84
4.2 Derivative estimates.....	87
4.3 Stability and instability of stationary solutions.....	89

4.4	Traveling waves.....	101
4.5	Global stability of traveling waves.....	112
4.6	More on Lyapunov methods.....	120
4.7	Further results in the bistable case.....	122
4.8	Stationary solutions for x -dependent source function.....	122
Chapter 5.	Systems: Comparison Techniques.....	124
5.1	Basic comparison theorems.....	124
5.2	An example from ecology.....	128
Chapter 6.	Systems: Linear Stability Techniques.....	134
6.1	Stability considerations for nonconstant stationary solutions and traveling waves.....	134
6.2	Pattern stability for a class of model systems.....	136
Chapter 7.	Systems: Bifurcation Techniques.....	143
7.1	Small amplitude stationary solutions.....	143
7.2	Small amplitude wave trains.....	152
7.3	Bibliographical discussion.....	152
Chapter 8.	Systems: Singular Perturbation and Scaling Techniques.....	155
8.1	Fast wave trains.....	155
8.2	Sharp fronts (review).....	159
8.3	Slowly varying waves (review).....	160
8.4	Partitioning (review).....	161
8.5	Transient asymptotics.....	162
Chapter 9.	References to Other Topics.....	163
9.1	Reaction-diffusion systems modeling nerve signal propagation.....	163
9.2	Miscellaneous.....	165
References.....		168
Index.....		182
