

# Contents

<b>1. The Challenge of Complex Systems</b> .....	1
1.1 What Are Complex Systems? .....	1
1.2 How to Deal with Complex Systems .....	5
1.3 Model Systems .....	7
1.4 Self-Organization .....	10
1.5 Aiming at Universality .....	11
1.5.1 Thermodynamics .....	11
1.5.2 Statistical Physics .....	12
1.5.3 Synergetics .....	13
1.6 Information .....	14
1.6.1 Shannon Information: Meaning Exorcised .....	15
1.6.2 Effects of Information .....	16
1.6.3 Self-Creation of Meaning .....	23
1.6.4 How Much Information Do We Need to Maintain an Ordered State? .....	29
1.7 The Second Foundation of Synergetics .....	33
<b>2. From the Microscopic to the Macroscopic World</b> .....	36
2.1 Levels of Description .....	36
2.2 Langevin Equations .....	37
2.3 Fokker-Planck Equation .....	40
2.4 Exact Stationary Solution of the Fokker-Planck Equation for Systems in Detailed Balance .....	41
2.4.1 Detailed Balance .....	41
2.4.2 The Required Structure of the Fokker-Planck Equation and Its Stationary Solution .....	42
2.5 Path Integrals .....	44
2.6 Reduction of Complexity, Order Parameters and the Slaving Principle .....	45
2.6.1 Linear Stability Analysis .....	46
2.6.2 Transformation of Evolution Equations .....	47
2.6.3 The Slaving Principle .....	48
2.7 Nonequilibrium Phase Transitions .....	49
2.8 Pattern Formation .....	51
<b>3. ... and Back Again: The Maximum Information Principle (MIP)</b> ..	53
3.1 Some Basic Ideas .....	53
3.2 Information Gain .....	57

3.3 Information Entropy and Constraints .....	58
3.4 Continuous Variables .....	63
<b>4. An Example from Physics: Thermodynamics .....</b>	<b>65</b>
<b>5. Application of the Maximum Information Principle to Self-Organizing Systems .....</b>	<b>69</b>
5.1 Introduction .....	69
5.2 Application to Self-Organizing Systems: Single Mode Laser .....	69
5.3 Multimode Laser Without Phase Relations .....	71
5.4 Processes Periodic in Order Parameters .....	72
<b>6. The Maximum Information Principle for Nonequilibrium Phase Transitions: Determination of Order Parameters, Enslaved Modes, and Emerging Patterns .....</b>	<b>74</b>
6.1 Introduction .....	74
6.2 General Approach .....	74
6.3 Determination of Order Parameters, Enslaved Modes, and Emerging Patterns .....	76
6.4 Approximations .....	77
6.5 Spatial Patterns .....	78
6.6 Relation to the Landau Theory of Phase Transitions. Guessing of Fokker-Planck Equations .....	79
<b>7. Information, Information Gain, and Efficiency of Self-Organizing Systems Close to Their Instability Points .....</b>	<b>81</b>
7.1 Introduction .....	81
7.2 The Slaving Principle and Its Application to Information .....	82
7.3 Information Gain .....	82
7.4 An Example: Nonequilibrium Phase Transitions .....	83
7.5 Soft Single-Mode Instabilities .....	84
7.6 Can We Measure the Information and the Information Gain? .....	85
7.6.1 Efficiency .....	85
7.6.2 Information and Information Gain .....	86
7.7 Several Order Parameters .....	87
7.8 Explicit Calculation of the Information of a Single Order Parameter .....	88
7.8.1 The Region Well Below Threshold .....	89
7.8.2 The Region Well Above Threshold .....	90
7.8.3 Numerical Results .....	93
7.8.4 Discussion .....	94
7.9 Exact Analytical Results on Information, Information Gain, and Efficiency of a Single Order Parameter .....	95
7.9.1 The Instability Point .....	97
7.9.2 The Approach to Instability .....	98
7.9.3 The Stable Region .....	99
7.9.4 The Injected Signal .....	100

7.9.5 Conclusions .....	101
7.10 The <i>S</i> -Theorem of Klimontovich .....	102
7.10.1 Region 1: Below Laser Threshold .....	104
7.10.2 Region 2: At Threshold .....	104
7.10.3 Region 3: Well Above Threshold .....	105
7.11 The Contribution of the Enslaved Modes to the Information Close to Nonequilibrium Phase Transitions .....	107
<b>8. Direct Determination of Lagrange Multipliers .....</b>	<b>115</b>
8.1 Information Entropy of Systems Below and Above Their Critical Point .....	115
8.2 Direct Determination of Lagrange Multipliers Below, At and Above the Critical Point .....	117
<b>9. Unbiased Modeling of Stochastic Processes: How to Guess Path Integrals, Fokker-Planck Equations and Langevin-<math>\dot{\text{I}}</math>to Equations .....</b>	<b>125</b>
9.1 One-Dimensional State Vector .....	125
9.2 Generalization to a Multidimensional State Vector .....	127
9.3 Correlation Functions as Constraints .....	130
9.4 The Fokker-Planck Equation Belonging to the Short-Time Propagator .....	132
9.5 Can We Derive Newton's Law from Experimental Data? .....	133
<b>10. Application to Some Physical Systems .....</b>	<b>135</b>
10.1 Multimode Lasers with Phase Relations .....	135
10.2 The Single-Mode Laser Including Polarization and Inversion .....	136
10.3 Fluid Dynamics: The Convection Instability .....	138
<b>11. Transitions Between Behavioral Patterns in Biology. An Example: Hand Movements .....</b>	<b>140</b>
11.1 Some Experimental Facts .....	140
11.2 How to Model the Transition .....	141
11.3 Critical Fluctuations .....	147
11.4 Some Conclusions .....	151
<b>12. Pattern Recognition .....</b>	<b>153</b>
12.1 Feature Selection .....	153
12.2 An Algorithm for Pattern Recognition .....	159
12.3 The Basic Construction Principle of a Synergetic Computer .....	161
12.4 Learning by Means of the Information Gain .....	163
12.5 Learning of Processes and Associative Action .....	165
<b>13. Quantum Systems .....</b>	<b>169</b>
13.1 Why Quantum Theory of Information? .....	169
13.2 The Maximum Information Principle .....	171
13.3 Order Parameters, Enslaved Modes and Patterns .....	177
13.4 Information of Order Parameters and Enslaved Modes .....	180

<b>14. Concluding Remarks and Outlook</b> .....	182
<b>References</b> .....	185
<b>Subject Index</b> .....	191
