Contents

Preface xi

PART I GENERAL CONCEPTS

1 Hamiltonian dynamics 1

1.1 Hamiltonian systems 2
1.2 The phase portrait 5
1.3 'Action-angle' variables 7
1.4 The nonlinear pendulum 10
1.5 Multidimensional motion 14
1.6 The Poincaré mapping 19

2 Stability and chaos 21

2.1 Nonlinear resonance 21
2.2 Internal nonlinear resonance 26
2.3 The KAM theory 28
2.4 Local instability 30
2.5 Mixing 32

PART II DYNAMIC ORDER AND CHAOS

3 The stochastic layer 36

3.1 The stochastic layer of a nonlinear pendulum: mapping close to a separatrix 36
3.2 The stochastic layer of a nonlinear pendulum: width of the layer 40

3.3	Weak interaction of resonances	44
3.4	The standard mapping	47
3.5	Stochastic layer of a nonlinear resonance	50
3.6	Non-trivial effects of discretization	53
3.7	Chaotic spinning of satellites	55
4	**Stochastic layer to stochastic sea transition**	58
4.1	The border of global chaos	60
4.2	Percival's variational principle	63
4.3	Cantori	67
4.4	Hamiltonian intermittency	69
4.5	The acceleration of relativistic particles	80
5	**The stochastic web**	86
5.1	KAM-tori and Arnold diffusion	87
5.2	Weak chaos and the stochastic web	90
5.3	Invariant tori inside the web (web-tori) and the width of the web	95
5.4	The KAM-tori to web-tori transition	103
6	**The uniform web**	109
6.1	Mapping with a twist	109
6.2	The periodic web	113
6.3	The aperiodic web and symmetry of plane tilings	122
6.4	The web's skeleton and the width of the web	128
6.5	Patterns in the case of a particle's diffusion	135
6.6	The breaking up of the web in the case of relativistic particles	138

PART III SPATIAL PATTERNS

7	**Two-dimensional patterns with quasi-symmetry**	143
7.1	What types of patterns are there?	144
7.2	Dynamic generation of patterns	148
7.3	Quasi-symmetry, Fourier spectrum and local isomorphism	155
7.4	Singularities of the phase volume-energy dependency (Van Hove singularities)	163
7.5	Dynamic organization in phase space	167

8 Two-dimensional hydrodynamic patterns with symmetry and quasi-symmetry 170

8.1 Two-dimensional steady-state vortex flows in an ideal liquid 172
8.2 Stability of steady-state plane flows with symmetrical structure 177

9 Chaos of stream lines 188

9.1 Stream lines in space 188
9.2 Stream lines of the ABC-flow 192
9.3 Three-dimensional flows with symmetry and quasi-symmetry 195
9.4 Stochastic layers and stochastic webs in hydrodynamics 200
9.5 Helical steady-state flows 206
9.6 The stochasticity of stream lines in a stationary Rayleigh–Benard convection 208

PART IV MISCELLANEA

10 Patterns in art and nature 211

10.1 Two-dimensional tilings in art 211
10.2 Phyllotaxis 224

Notes 232
