
Contents

1	The Idea of Inverse	1
1.1	Solving Systems of Linear Equations	1
1.1.1	Numerical Note	10
1.1.1.1	Floating Point Arithmetic	10
1.1.1.2	Arithmetic Operations	11
1.1.1.3	Loss of Significance	12
1.1.2	MATLAB Moment	13
1.1.2.1	Creating Matrices in MATLAB	13
1.2	The Special Case of “Square” Systems	17
1.2.1	The Henderson Searle Formulas	21
1.2.2	Schur Complements and the Sherman-Morrison-Woodbury Formula	24
1.2.3	MATLAB Moment	37
1.2.3.1	Computing Inverse Matrices	37
1.2.4	Numerical Note	39
1.2.4.1	Matrix Inversion	39
1.2.4.2	Operation Counts	39
2	Generating Invertible Matrices	41
2.1	A Brief Review of Gauss Elimination with Back Substitution	41
2.1.1	MATLAB Moment	47
2.1.1.1	Solving Systems of Linear Equations	47
2.2	Elementary Matrices	49
2.2.1	The Minimal Polynomial	57
2.3	The LU and LDU Factorization	63
2.3.1	MATLAB Moment	75
2.3.1.1	The LU Factorization	75
2.4	The Adjugate of a Matrix	76
2.5	The Frame Algorithm and the Cayley-Hamilton Theorem	81
2.5.1	Digression on Newton’s Identities	85
2.5.2	The Characteristic Polynomial and the Minimal Polynomial	90

2.5.3	Numerical Note	95
2.5.3.1	The Frame Algorithm	95
2.5.4	MATLAB Moment	95
2.5.4.1	Polynomials in MATLAB	95
3	Subspaces Associated to Matrices	99
3.1	Fundamental Subspaces	99
3.1.1	MATLAB Moment	109
3.1.1.1	The Fundamental Subspaces	109
3.2	A Deeper Look at Rank	111
3.3	Direct Sums and Idempotents	117
3.4	The Index of a Square Matrix	128
3.4.1	MATLAB Moment	147
3.4.1.1	The Standard Nilpotent Matrix	147
3.5	Left and Right Inverses	148
4	The Moore-Penrose Inverse	155
4.1	Row Reduced Echelon Form and Matrix Equivalence	155
4.1.1	Matrix Equivalence	160
4.1.2	MATLAB Moment	167
4.1.2.1	Row Reduced Echelon Form	167
4.1.3	Numerical Note	169
4.1.3.1	Pivoting Strategies	169
4.1.3.2	Operation Counts	170
4.2	The Hermite Echelon Form	171
4.3	Full Rank Factorization	176
4.3.1	MATLAB Moment	179
4.3.1.1	Full Rank Factorization	179
4.4	The Moore-Penrose Inverse	179
4.4.1	MATLAB Moment	190
4.4.1.1	The Moore-Penrose Inverse	190
4.5	Solving Systems of Linear Equations	190
4.6	Schur Complements Again (optional)	194
5	Generalized Inverses	199
5.1	The $\{1\}$ -Inverse	199
5.2	$\{1,2\}$ -Inverses	208
5.3	Constructing Other Generalized Inverses	210
5.4	$\{2\}$ -Inverses	217
5.5	The Drazin Inverse	223
5.6	The Group Inverse	230

6	Norms	233
6.1	The Normed Linear Space $\mathbb{C}^n$	233
6.2	Matrix Norms	244
6.2.1	MATLAB Moment	252
6.2.1.1	Norms	252
7	Inner Products	257
7.1	The Inner Product Space $\mathbb{C}^n$	257
7.2	Orthogonal Sets of Vectors in $\mathbb{C}^n$	262
7.2.1	MATLAB Moment	269
7.2.1.1	The Gram-Schmidt Process	269
7.3	QR Factorization	269
7.3.1	Kung's Algorithm	274
7.3.2	MATLAB Moment	276
7.3.2.1	The QR Factorization	276
7.4	A Fundamental Theorem of Linear Algebra	278
7.5	Minimum Norm Solutions	282
7.6	Least Squares	285
8	Projections	291
8.1	Orthogonal Projections	291
8.2	The Geometry of Subspaces and the Algebra of Projections	299
8.3	The Fundamental Projections of a Matrix	309
8.3.1	MATLAB Moment	313
8.3.1.1	The Fundamental Projections	313
8.4	Full Rank Factorizations of Projections	313
8.5	Affine Projections	315
8.6	Quotient Spaces (optional)	324
9	Spectral Theory	329
9.1	Eigenstuff	329
9.1.1	MATLAB Moment	337
9.1.1.1	Eigenvalues and Eigenvectors in MATLAB	337
9.2	The Spectral Theorem	338
9.3	The Square Root and Polar Decomposition Theorems	347
10	Matrix Diagonalization	351
10.1	Diagonalization with Respect to Equivalence	351
10.2	Diagonalization with Respect to Similarity	357

10.3	Diagonalization with Respect to a Unitary	371
10.3.1	MATLAB Moment	376
10.3.1.1	Schur Triangularization	376
10.4	The Singular Value Decomposition	377
10.4.1	MATLAB Moment	385
10.4.1.1	The Singular Value Decomposition	385
11	Jordan Canonical Form	389
11.1	Jordan Form and Generalized Eigenvectors	389
11.1.1	Jordan Blocks	389
11.1.1.1	MATLAB Moment	392
11.1.2	Jordan Segments	392
11.1.2.1	MATLAB Moment	395
11.1.3	Jordan Matrices	396
11.1.3.1	MATLAB Moment	397
11.1.4	Jordan's Theorem	398
11.1.4.1	Generalized Eigenvectors	402
11.2	The Smith Normal Form (optional)	422
12	Multilinear Matters	431
12.1	Bilinear Forms	431
12.2	Matrices Associated to Bilinear Forms	437
12.3	Orthogonality	440
12.4	Symmetric Bilinear Forms	442
12.5	Congruence and Symmetric Matrices	447
12.6	Skew-Symmetric Bilinear Forms	450
12.7	Tensor Products of Matrices	452
12.7.1	MATLAB Moment	456
12.7.1.1	Tensor Product of Matrices	456
Appendix A	Complex Numbers	459
A.1	What Is a Scalar?	459
A.2	The System of Complex Numbers	464
A.3	The Rules of Arithmetic in $\mathbb{C}$	466
A.3.1	Basic Rules of Arithmetic in $\mathbb{C}$	466
A.3.1.1	Associative Law of Addition	466
A.3.1.2	Existence of a Zero	466
A.3.1.3	Existence of Opposites	466
A.3.1.4	Commutative Law of Addition	466
A.3.1.5	Associative Law of Multiplication	467
A.3.1.6	Distributive Laws	467
A.3.1.7	Commutative Law for Multiplication	467

A.3.1.8	Existence of Identity	467
A.3.1.9	Existence of Inverses	467
A.4	Complex Conjugation, Modulus, and Distance	468
A.4.1	Basic Facts about Complex Conjugation	469
A.4.2	Basic Facts about Magnitude	469
A.4.3	Basic Properties of Distance	470
A.5	The Polar Form of Complex Numbers	473
A.6	Polynomials over $\mathbb{C}$	480
A.7	Postscript	482
Appendix B	Basic Matrix Operations	485
B.1	Introduction	485
B.2	Matrix Addition	487
B.3	Scalar Multiplication	489
B.4	Matrix Multiplication	490
B.5	Transpose	495
B.5.1	MATLAB Moment	502
B.5.1.1	Matrix Manipulations	502
B.6	Submatrices	503
B.6.1	MATLAB Moment	506
B.6.1.1	Getting at Pieces of Matrices	506
Appendix C	Determinants	509
C.1	Motivation	509
C.2	Defining Determinants	512
C.3	Some Theorems about Determinants	517
C.3.1	Minors	517
C.3.2	The Cauchy-Binet Theorem	517
C.3.3	The Laplace Expansion Theorem	520
C.4	The Trace of a Square Matrix	528
Appendix D	A Review of Basics	531
D.1	Spanning	531
D.2	Linear Independence	533
D.3	Basis and Dimension	534
D.4	Change of Basis	538
Index		543
