|                                                                                  |     |
|----------------------------------------------------------------------------------|-----|
| Foreword .....                                                                   | v   |
| Preface .....                                                                    | vii |
| Observation and control of elastic waves .....                                   | 1   |
| <i>Claude Bardos, Tawfik Masrour, and Frederic Tatout</i>                        |     |
| Modeling the dispersion of light .....                                           | 17  |
| <i>Phillipe Donnat and Jeffrey Rauch</i>                                         |     |
| Singularities and oscillations in a nonlinear variational<br>wave equation ..... | 37  |
| <i>Robert T. Glassey, John K. Hunter, and Yuzi Zheng</i>                         |     |
| Viscous boundary layers and high frequency oscillations .....                    | 61  |
| <i>Olivier Gues</i>                                                              |     |
| Nonlinear oscillations and caustics .....                                        | 79  |
| <i>J.L. Joly, G. Métivier, and J. Rauch</i>                                      |     |
| Microlocal analysis on Morrey spaces .....                                       | 97  |
| <i>Michael E. Taylor</i>                                                         |     |
| Nonlinear geometric optics for reflecting and glancing<br>oscillations .....     | 137 |
| <i>Mark Williams</i>                                                             |     |
