0	Introduction.	1
	Part I: Existence Theorems	
1	Nonlinear minimization problems	12
2	Minimization with linear operators.	23
	Part II: Characterization Theorems	
3	Nonlinear operators in L^p , $1 < p \leq \infty$	33
4	L^∞ minimization problems for elliptic operators .	47
5	L^1 minimization in one and several variables. . .	54
	Part III: Uniqueness Theorems	
6	Sets of uniqueness in L^∞ minimization problems. .	64
	Part IV: Bang-bang Characterization Theorems	
7	Bang-bang optimal controls.	73
	Part V: Lagrange Multiplier Solutions with Inequalities	
8	A general theorem of Kuhn-Tucker type	85
9	Stable and unstable elastica equilibrium and the problem of minimum curvature.	90
	Part VI: Convergence Theorems	
10	Approximation by extremals of nonlinear differential expressions in one variable and quadratic forms in several variables.	107
	Part VII: Perfect Spline Solutions in the Theory of Best Approximation in L^∞	
11	The trigonometric and algebraic Favard problem. .	134
12	Minimization and interpolation at integer points of the real axis.	151
13	The Landau problem and Kolmogorov's theorem . . .	164
14	Perfect interpolating splines on compact intervals	172
	Part VIII: Further Topics	
15	A Pólya algorithm for the Favard solution, N-width characterizations and Whitney type theorems . . .	177
16	Application of the Riesz-Fredholm-Schauder theory
