

CONTENTS

<u>Introduction</u>	1
<u>Part One Type I Representations and Intertwining Operators for $O^*(2h+1,1)$</u>	10
<u>1. Elementary representations of the pseudo-orthogonal group</u>	
<u>1. Group structure. Preliminaries</u>	
1.A The group $O(2h + 1,1)$ and its Lie algebra	11
1.B Subgroups and decompositions	12
1.C The compactified Euclidean space as a homogeneous space of G	16
1.D Matrix realization of various subgroups of G . Construction of the Bruhat decomposition	18
1.E Relationship between the Bruhat and the Iwasawa decomposition The Haar measure	25
<u>2. Induced representations. Definition and various realizations</u>	
2.A Synopsis on the irreducible representations of the orthogonal group	28
2.B Covariant vector-valued functions on G . Definition of the induced representations	32
2.C The compact picture. K -content of the elementary representations	34
2.D The noncompact picture: x -space realization	37
<u>3. Further properties of the elementary representations</u>	
3.A Equivalence, irreducibility, completeness	41
3.B Characters of elementary representations	47
3.C The spherical trace function. The character of a sub- quotient of an elementary representation	53
3.D The principal series of unitary representations	54
3.E Infinitesimal generators and Casimir operators of the elementary representations	57

II. Intertwining distributions and their Fourier transform

4. Intertwining operators: x-space realization

4.A Group theoretical definition of the intertwining operators 60

4.B The intertwining distributions in the noncompact picture 64

5. Momentum space expansion of the intertwining distribution and positivity

5.A Fourier transform of $G_\chi(x, \beta, \beta_1)$ 66

5.B Harmonic expansion of $G_\chi(p)$ 69

5.C Normalization and positivity for nonexceptional representations.

Complementary series of unitary IR's 75

5.D Wightman positivity 81

III. Properties of elementary representations at exceptional integer points

6. Nondecomposable representations and intertwining differential operators

6.A Subrepresentations of exceptional elementary representations 85

6.B Intertwining differential operators. Partial equivalence among the representations $\chi_{\ell\nu}^{(\prime)\pm}$ 89

6.C Hermitian forms on invariant subspaces. Exceptional series of unitary representations 94

6.D Differential identities between hermitian forms for exceptional representations 101

7. Discrete series of unitary representations

7.A Definition and general properties of the discrete series of $SO^\dagger(2n, 1)$ 103

7. B. Unitarily induced representations on G/K	107
7. C. Realization of the unitary representation U_s^+ in the space \mathcal{L}_{s+}^2 (NA)	110
7. D. K-invariants. Solution of the eigenvalue problem for the Casimir operator. The discrete series $U_{\ell\nu}$	115
7. E. Two-point Green function. Equivalence of $U_{\ell\nu}^+$ with the subrepresentation of $\chi_{\ell\nu}^{'+}$ acting in $D_{\ell\nu}^+$	122
8. <u>The Plancherel theorem. Concluding remarks</u>	
8. A. Harmonic analysis of the left regular representation of $SO^\uparrow(2h+1, 1)$ for integer h	128
8. B. Harmonic analysis on $SO^\uparrow(2n, 1)$. The role of the discrete series	131
8. C. Synopsis on unitary type 1 representations. Summary of equivalence relations	135
<u>Appendix A. Symmetric tensor representations of $SO(n)$ and their decomposition in IR's of $SO(n-1)$</u>	
A.1 Harmonic extension of homogeneous polynomial functions on the light cone	138
A.2 $SO(n-1)$ expansion of homogeneous polynomials. The zonal spherical functions	141
A.3 Evaluation of the proportionality constant a_ℓ between the scalar products in \mathcal{V}^ℓ and $\mathcal{H}_\ell^{(n)}$	143
A.4 Derivation of factorized expression for the projection operators $\Pi^{\ell s}$	144
A.5 Interior differentiation on the complex cone. Expression for the convolution of two tensors in terms of homogeneous polynomials	149
<u>Appendix B. The special cases $h=1$ and $h=\frac{1}{2}$. Relation to the formalism of two by two matrices</u>	
B.1 Reduction of the representation χ of $O^\uparrow(3, 1)$ into elemen-	

tary representations of $SL(2, \mathbb{C})$	153
B.2 Vanishing of the projection operators $\prod^{\ell s}$ for $s > 1$	155
B.3 The structure of exceptional representations for $h=1$	157
B.4 Elementary representations of $SO^\uparrow(2,1)$. The analytic discrete series	159
<u>Appendix C. Positivity of the invariant scalar product in the</u>	<u>165</u>
<u>subspace $D_{\ell\nu}$ of $C_{\ell\nu}^*$</u>	
C.1 The problem. Asymptotic expansion of $f(p, z)$ for $p \rightarrow 0$	165
C.2 Existence of nontrivial positive semidefinite hermitian form	
$(f, G_{\ell\nu}^* f)$ on $C_{\ell\nu}^-$	167
<u>Part Two. Conformal Partial Wave Analysis</u>	<u>173</u>
IV. <u>Clebsch-Gordan expansion of the tensor product of two</u>	
<u>unitary principal or supplementary series representations</u>	
9. <u>The Kronecker product of two elementary representations</u>	
<u>as an induced representation on G/MA</u>	175
10. <u>Construction of the Clebsch-Gordan expansion</u>	
10.A. Clebsch-Gordan kernels	181
10.B. Application of the Plancherel theorem to the Kronecker	
product of two principal series representations	192
10.C. Odd space time dimension $2h$	200
10.D. Analytic continuation in c_1 and c_2	203

11.	<u>Special cases and further properties of the expansion formula</u>	
11.A.	The Clebsch-Gordan kernel for two class I representations. Symmetry and normalization	206
11.B.	Identities for the Clebsch-Gordan kernels at exceptional integer points	213
11.C.	Tensor product representation and Clebsch-Gordan expansion for distributions	217
V.	<u>Dynamical derivation of vacuum operator product expansion in Euclidean conformal quantum field theory</u>	
12.	<u>Renormalizable models of self-interacting scalar fields. Dynamical equations for Euclidean Green functions</u>	
12.A.	A 6-dimensional model. Euclidean Green functions. Generating functionals	219
12.B.	Graphical notation. $1i$ - and $2i$ -kernels	220
12.C.	Dynamical equations. Stress energy tensor. Ward identities	221
12.D.	A more realistic model	224
13.	<u>Invariance and invariant solutions of the dynamical equations. Conformal partial wave expansion for the Euclidean Green functions</u>	
13.A.	Euclidean conformal invariance of the equations	225
13.B.	Conformal invariant 2- and 3-point functions	227
13.C.	Skeleton diagram expansion	230
13.D.	Conformal partial wave expansion	232
13.E.	Further expansions	234
14.	<u>Implications of the dynamical equations. Pole structure of conformal partial waves</u>	
14.A.	Poles in the conformal partial waves implied by the vertex bootstrap equations	238
14.B.	Pole structure of the n -point partial waves. Expression for the residues	240
14.C.	Basic conformal covariant tensor fields. Analyticity assumption	241
15.	<u>Derivation of an operator product expansion for vacuum expectation values</u>	

15.A	Another form of the conformal expansion involving a Minkowski momentum space integral. The Q-kernels	244
15.B	The vacuum operator product expansion	249
15.C	Wightman positivity for the 4-point function	253
16.	<u>The problem of crossing symmetry. Concluding remarks</u>	
16.A	Crossing symmetry and duality	254
16.B	A crossing symmetry representation for the 4-point function	256
16.C	Summary and discussion	257
	<u>Appendix D. Proof of lemma 10.3.</u>	259
	<u>Appendix E. A summation formula involving ratios of Γ-functions</u>	260
	<u>Appendix F. Partial Fourier transform of $V(x_1 x_2 x_3)$ and related formulas</u>	262
F.1	Fourier transform in x_3	262
F.2	Derivation of Eq.(13.36) for the conformal partial wave	263
	<u>Appendix G. Identities between Q and Υ functions for partially equivalent representations</u>	267
	<u>References</u>	268
