

TABLE OF CONTENTS

Introduction	i
Chapter I: Preliminary Remarks	1
1. Universal Grammar	1
2. Configurational and Non-configurational Languages	4
3. Structural and Functional Theories of UG	9
4. The Proposed Theory	31
Chapter II: Basic Concepts	35
1. Overview	35
2. Basic F-structure Components: Predicates	40
3. Basic F-structure Components: Arguments	60
4. Building Complex F-structures	87
5. The S-structure/F-structure Interface	99
6. Summary and Concluding Remarks	125
Notes	142
Chapter III: The Co-Indexing System: A Reanalysis of Control and Bound Anaphora	165
1. Introduction	165
2. The Short-range Control Relation	167
3. Bound Anaphora	185
4. The Long-range Control Relation	199
5. Unification	215
6. The Generalized Co-Indexing System	222
Notes	229
Chapter IV: The Argument Reduction System: A Reanalysis of Bounded Movement and Deletion	243
1. Introduction	243

2. The Argument Reduction Relation	246
3. Extensions: The Generalized Argument Reduction System	270
4. Constraints: Defining the Notion "Possible Asymmetric FS-pair"	297
5. Summary and Conclusions	309
Notes	317
 Chapter V: The EA System: A Reanalysis of Wh-movement	 329
1. Introduction	329
2. The E-Anaphora Rule	330
3. The Predicate Argument Constraint	338
4. The Single Gap Constraint	356
5. Variation	368
6. The Generalized EA System	381
Notes	384
