

TABLE OF CONTENTS

Introduction	xi
CHAPTER 1. HOLOMORPHIC FREDHOLM OPERATOR FUNCTIONS	1
1.1. Lifting and open mapping theorems	1
1.2. Some classes of linear operators	5
1.3. Banach vector bundles	21
1.4. Fredholm operators that depend continuously on a parameter	28
1.5. Some information from complex analysis	32
A. Interpolation of entire functions of finite order	34
B. Some information from the complex analysis in several variables	54
C. Some problems of infinite-dimensional complex analysis	60
1.6. Fredholm operators that depend holomorphically on a parameter	66
1.7. Image and cokernel of a Fredholm morphism in spaces of holomorphic sections	74
1.8. Image and cokernel of a Fredholm morphism in spaces of holomorphic sections with bounds	76
1.9. Comments and references	86
CHAPTER 2. SPACES, OPERATORS AND TRANSFORMS	91
2.1. Basic spaces and operators	91
2.2. Fourier transform on the group of periods	93
2.3. Comments and references	102

CHAPTER 3. FLOQUET THEORY FOR HYPOELLIPTIC EQUATIONS AND SYSTEMS IN THE WHOLE SPACE	103
3.1. Floquet - Bloch solutions. Quasimomentums and Floquet exponents	103
3.2. Floquet expansion of solutions of exponential growth	110
3.3. Completeness of Floquet solutions in a class of solutions of faster growth	112
3.4. Other classes of equations	115
A. Elliptic systems	115
B. Hypoelliptic equations and systems	116
C. Pseudodifferential equations	117
D. Smoothness of coefficients	118
3.5. Comments and references	121
CHAPTER 4. PROPERTIES OF SOLUTIONS OF PERIODIC EQUATIONS	125
4.1. Distribution of quasimomentums and decreasing solutions	125
4.2. Solvability of non-homogeneous equations	147
4.3. Bloch property	150
4.4. Quasimomentum dispersion relation. Bloch variety	151
4.5. Some problems of spectral theory	158
4.6. Positive solutions	172
4.7. Comments and references	183
CHAPTER 5. EVOLUTION EQUATIONS	187
5.1. Abstract hypoelliptic evolution equations on the whole axis	187

5.2. Some degenerate cases	209
5.3. Cauchy problem for abstract parabolic equations	224
5.4. Elliptic and parabolic boundary value problems in a cylinder	244
A. Elliptic problems	244
B. Parabolic problems	255
5.5. Comments and references	259
 CHAPTER 6. OTHER CLASSES OF PROBLEMS	 263
6.1. Equations with deviating arguments	263
6.2. Equations with coefficients that do not depend on some arguments	268
6.3. Invariant differential equations on Riemannian symmetric spaces of non-compact type	283
6.4. Comments and references	297
