Introduction: On the Quest for Explanation <i>Samuel David Epstein and T. Daniel Seely</i>	1
1 Explanation through minimization	1
2 Derivation and explanation in the Minimalist Program	4
2.1 The computational process	5
2.2 Was GB nonderivational?	6
2.3 Which type of derivational theory is preferable?	7
2.4 Explanation through representational minimization	8
2.5 Summary	9
3 The articles	10
1 ON THE STATUS OF REPRESENTATIONS AND DERIVATIONS <i>Michael Brody</i>	19
1 Representations and derivations – the status of the mixed theory	19
1.1 Restrictiveness and duplication	19
1.2 Principles of I-language	20
2 Representations or derivations	22
2.1 Derivational theories and weak representationality	22
2.2 Restrictiveness again	25
3 C-command	27
3.1 Derivational definition	27
3.2 Derivational explanation?	29
3.3 Domination	32
4 Summary	33
2 ELIMINATING LABELS <i>Chris Collins</i>	42
1 Basic properties of X'-Theory	44
2 Selection	49

2.1	Subcategorization and Merge	54
2.2	Accessibility	55
3	The Minimal Link Condition	57
4	Labels at the PF interface	59
5	Conclusion	61
3	RULE APPLICATIONS AS CYCLES IN A LEVEL-FREE SYNTAX	65
	<i>Samuel David Epstein and T. Daniel Seely</i>	
1	Introduction: the role of Minimalist method	65
2	DBP's general argument for cyclic Spell Out	67
2.1	Background: the DBP feature system	67
2.2	The general DBP argument that Spell Out must be strongly cyclic	69
3	The problem with the general argument that Spell Out must be strongly cyclic	71
4	A derivational approach to the problem of cyclic Spell Out	74
4.1	A single representation?	76
5	Phasal Spell Out	77
5.1	Why <i>v</i> P and CP?	78
5.2	Global lookback?	79
5.3	Simultaneity?	82
6	Summary	84
4	CRASH-PROOF SYNTAX	90
	<i>John Frampton and Sam Gutmann</i>	
1	Filters versus constrained operations	90
2	Crash-proof syntax and computational efficiency	94
3	Redundancy	94
4	Optimal design	95
5	Crash-proof selection	96
6	The Case Filter	97
7	The Chain Condition	101
8	Conclusion	103
5	REPROJECTIONS	106
	<i>Norbert Hornstein and Juan Uriagereka</i>	
1	Introduction	106
2	Basic mechanics	107
3	An important prediction	109
4	QI island inducers	111
5	LF islands without binary quantification?	113
6	Binary quantifiers with no associated LF islands?	116
7	A "definiteness effect" in nonexistential contexts	118
8	Neg-Raising	120
9	The interpretation of weak determiners	124
10	A binary treatment for negation	125
11	Conclusions and further questions	128

6	PRONOUNS AND THEIR ANTECEDENTS	133
	<i>Richard S. Kayne</i>	
1	Introduction	133
2	Clitic doubling	134
3	Antecedent and pronoun	135
4	Control	135
5	Merge and Move	136
6	Condition C	137
7	More on Condition C and on apparently antecedent-less pronouns	138
8	Strong crossover	141
9	Condition B	143
10	Why are there reflexives?	147
11	English-type reflexives	147
12	<i>zich</i> -type reflexives	148
13	Backwards pronominalization	150
14	Epithets again	152
15	Condition C reconstruction effects	153
16	Further Condition C reconstruction effects	155
17	Sideward movement	156
18	Circularity	156
19	"Transitivity of coreference"	157
20	Split antecedents and overlapping reference	158
21	Conclusion	158
7	SCRAMBLING, CASE, AND INTERPRETABILITY	167
	<i>Hisatsugu Kitahara</i>	
1	Scrambling and binding relations	167
2	Specifying the mechanisms of scrambling	171
3	A strongly derivational model of syntax	173
4	A derivational analysis of binding relations	175
5	Long-distance scrambling	178
6	Summary	179
8	RESUMPTION, SUCCESSIVE CYCLICITY, AND THE LOCALITY OF OPERATIONS	184
	<i>James McCloskey</i>	
1	Background	184
2	The core pattern and some initial issues	185
3	The form of complementizers	188
4	An earlier analysis	191
5	Mixed chains – movement and binding	193
5.1	Pattern 1	194
5.2	Pattern 2	197
5.3	Pattern 3	199
5.4	Implications	201
6	Analysis	202

6.1	Two features	203
6.2	Successive cyclic effects	204
6.3	Implications	205
7	Adjunct extraction	206
8	A final challenge	213
9	Summary and conclusion	218
9	VERY LOCAL A' MOVEMENT IN A ROOT-FIRST DERIVATION	227
	<i>Norvin Richards</i>	
1	Expletive-associate relations	229
2	Sinking and non-Sinking	231
3	Very local A' movement	236
3.1	Inner <i>tough</i> -movement	236
3.2	Vacuous movement	237
3.3	Contained relative clauses in Japanese	238
3.4	Tense islands	240
3.5	Persian scrambling	241
3.6	Tagalog extraction	243
4	Conclusion	245
10	ARGUMENTS FOR A DERIVATIONAL APPROACH TO SYNTACTIC RELATIONS BASED ON CLITICS	249
	<i>Esther Torrego</i>	
1	Introduction	249
1.1	Background	250
1.2	Background assumptions	251
1.3	English	252
2	Strict derivationality: the first two arguments from Romance	252
2.1	The first argument: French and Italian	253
2.2	The second argument: Spanish versus French/Italian	254
3	The third argument	260
3.1	Raising-to-object or control?	260
4	Conclusion	264
11	ISSUES RELATING TO A DERIVATIONAL THEORY OF BINDING	269
	<i>Jan-Wouter Zwart</i>	
1	Introduction	269
2	Anaphoricity as acquired information	272
3	Consequences	275
3.1	Asymmetry	275
3.2	Obviation (Principle C)	276
3.3	Obligatoriness	277
3.4	Uniqueness	278
3.5	C-command	278
3.6	Locality	279
3.7	Binding restricted to A-positions	280

3.8	Local obviation (Principle B)	282
3.9	Absence of nominative anaphors	283
3.10	Conclusion	284
4	Other types of anaphora	285
5	Reconstruction	290
6	A few words on remaining problems	293
7	Conclusion	294
	INDEX	305
