PREFACE

CHAPTER 1 ANALYTIC CONTINUATION 1

1. THE EXPONENTIAL FUNCTION AND THE LOGARITHM 1
2. CONTINUATION SEQUENCES 11
3. CONTINUATION ALONG AN ARC 13
4. GERMS 17
5. EXISTENCE OF CONTINUATIONS 19
6. THE WINDING NUMBER 23
7. THE ARGUMENT PRINCIPLE 27
8. THE MONODROMY THEOREM 33
9. COMPOSITION OF GERMS 36
10. COMPOSITION OF CONTINUATIONS 38
11. COVERING SURFACES 40

CHAPTER 2 GEOMETRIC CONSIDERATIONS 45

1. COMPLEX PROJECTIVE SPACE 45
2. LINEAR TRANSFORMATIONS 48
3. FRACTIONAL LINEAR TRANSFORMATIONS 51
4. PROPERTIES OF FRACTIONAL LINEAR
TRANSFORMATIONS 53
5. SYMMETRY 58
6. SCHWARZ'S LEMMA 61
7. NON-EUCLIDEAN GEOMETRY 69
8. THE SCHWARZ REFLECTION PRINCIPLE 75

CHAPTER 3 THE MAPPING THEOREMS OF RIEMANN AND KOEBE 82

1. ANALYTIC EQUIVALENCE 82
2. LOCAL UNIFORM CONVERGENCE 85

3. A THEOREM OF HURWITZ 89
4. IMPLICATIONS OF POINTWISE CONVERGENCE 92
5. IMPLICATIONS OF CONVERGENCE ON A SUBSET 95
6. APPROXIMATELY LINEAR FUNCTIONS—ANOTHER APPLICATION OF SCHWARZ'S LEMMA 99
7. A UNIFORMIZATION THEOREM 103
8. A CLOSER LOOK AT THE COVERING 111
9. BOUNDARY BEHAVIOR 112
10. LINDELÖF'S LEMMA 113
11. FACTS FROM TOPOLOGY 116
12. CONTINUITY AT THE BOUNDARY 117
13. A THEOREM OF FEJER 121

CHAPTER 4 THE MODULAR FUNCTION 126

1. EXCEPTIONAL VALUES 126
2. THE MODULAR CONFIGURATION 128
3. THE LANDAU RADIUS 133
4. SCHOTTKY'S THEOREM 135
5. NORMAL FAMILIES 137
6. MONTEL'S THEOREM 142
7. PICARD'S SECOND THEOREM 144
8. THE KOEBE-FABER DISTORTION THEOREM 145
9. BLOCH'S THEOREM 149

CHAPTER 5 THE HADAMARD PRODUCT THEOREM 152

1. INFINITE PRODUCTS 152
2. PRODUCTS OF FUNCTIONS 162
3. THE WEIERSTRASS PRODUCT THEOREM 165
4. FUNCTIONS OF FINITE ORDER 170
5. EXPONENT OF CONVERGENCE 174
6. CANONICAL PRODUCTS 178
7. THE BOREL-CARATHÉODORY LEMMA—ANOTHER FORM OF SCHWARZ'S LEMMA 181
8. A LEMMA OF H. CARTAN 184
9. THE HADAMARD PRODUCT THEOREM 186
10. THE GAMMA FUNCTION 190
11. STANDARD FORMULAS 193
12. THE INTEGRAL REPRESENTATION OF $\Gamma(z)$ 195

CHAPTER 6 THE PRIME NUMBER THEOREM 200

1. DIRICHLET SERIES 200
2. NUMBER-THEORETIC FUNCTIONS 202
3. STATEMENT OF THE PRIME NUMBER THEOREM 205
4. THE RIEMANN ZETA FUNCTION 210
5. ANALYTIC CONTINUATION OF $\zeta(s)$ 213
6. RIEMANN'S FUNCTIONAL EQUATION 219
7. THE ZEROS OF $\zeta(s)$ IN THE CRITICAL STRIP 222
8. $\zeta(s)$ FOR $\operatorname{Re} s = 1$ 227
9. INTEGRAL REPRESENTATION OF DIRICHLET SERIES 229
10. INTEGRAL-THEORETIC LEMMAS 232
11. WEAK LIMITS 235
12. A TAUBERIAN THEOREM 238

BIBLIOGRAPHY 243**INDEX 245**
