

CONTENTS

<i>Preface</i>	vii
CHAPTER 1: COMPLEX NUMBERS	1
1. <i>The Algebra of Complex Numbers</i>	1
1.1. Arithmetic Operations	1
1.2. Square Roots	3
1.3. Justification	4
1.4. Conjugation, Absolute Value	6
1.5. Inequalities	9
2. <i>The Geometric Representation of Complex Numbers</i>	12
2.1. Geometric Addition and Multiplication	12
2.2. The Binomial Equation	15
2.3. Analytic Geometry	17
2.4. The Spherical Representation	18
CHAPTER 2: COMPLEX FUNCTIONS	21
1. <i>Introduction to the Concept of Analytic Function</i>	21
1.1. Limits and Continuity	22
1.2. Analytic Functions	24
1.3. Polynomials	28
1.4. Rational Functions	30
2. <i>Elementary Theory of Power Series</i>	33
2.1. Sequences	34
2.2. Series	35
2.3. Uniform Convergence	36
2.4. Power Series	38
2.5. Abel's Limit Theorem	42

3. The Exponential and Trigonometric Functions	43
3.1. The Exponential	43
3.2. The Trigonometric Functions	44
3.3. The Periodicity	45
3.4. The Logarithm	46
 CHAPTER 3: ANALYTIC FUNCTIONS AS MAPPINGS	 49
1. Elementary Point Set Topology	50
1.1. Sets and Elements	50
1.2. Metric Spaces	51
1.3. Connectedness	54
1.4. Compactness	59
1.5. Continuous Functions	64
1.6. Topological Spaces	67
2. Conformality	68
2.1. Arcs and Closed Curves	68
2.2. Analytic Functions in Regions	69
2.3. Conformal Mapping	73
3. Linear Transformations	76
3.1. The Linear Group	76
3.2. The Cross Ratio	78
3.3. Symmetry	80
3.4. Oriented Circles	83
3.5. Families of Circles	84
4. Elementary Conformal Mappings	89
4.1. The Use of Level Curves	89
4.2. A Survey of Elementary Mappings	93
4.3. Elementary Riemann Surfaces	97
 CHAPTER 4: COMPLEX INTEGRATION	 101
1. Fundamental Theorems	101
1.1. Line Integrals	101
1.2. Rectifiable Arcs	104
1.3. Line Integrals as Functions of Arcs	105
1.4. Cauchy's Theorem for a Rectangle	109
1.5. Cauchy's Theorem in a Circular Disk	112
2. Cauchy's Integral Formula	114
2.1. The Index of a Point with Respect to a Closed Curve	114
2.2. The Integral Formula	118
2.3. Higher Derivatives	120

3. Local Properties of Analytic Functions	124
3.1. Removable Singularities. Taylor's Theorem	124
3.2. Zeros and Poles	126
3.3. The Local Mapping	130
3.4. The Maximum Principle	133
4. The General Form of Cauchy's Theorem	137
4.1. Chains and Cycles	137
4.2. Simple Connectivity	139
4.3. Exact Differentials in Simply Connected Regions	141
4.4. Multiply Connected Regions	144
5. The Calculus of Residues	147
5.1. The Residue Theorem	147
5.2. The Argument Principle	151
5.3. Evaluation of Definite Integrals	153
6. Harmonic Functions	160
6.1. Definition and Basic Properties	160
6.2. The Mean-value Property	163
6.3. Poisson's Formula	165
6.4. Schwarz's Theorem	167
6.5. The Reflection Principle	170
 CHAPTER 5: SERIES AND PRODUCT DEVELOPMENTS	 173
1. Power Series Expansions	173
1.1. Weierstrass's Theorem	173
1.2. The Taylor Series	177
1.3. The Laurent Series	182
2. Partial Fractions and Factorization	185
2.1. Partial Fractions	185
2.2. Infinite Products	189
2.3. Canonical Products	192
2.4. The Gamma Function	196
2.5. Stirling's Formula	199
3. Entire Functions	205
3.1. Jensen's Formula	205
3.2. Hadamard's Theorem	206
4. Normal Families	210
4.1. Equicontinuity	210
4.2. Normality and Compactness	211
4.3. Arzela's Theorem	214
4.4. Families of Analytic Functions	215
4.5. The Classical Definition	217

CHAPTER 6: CONFORMAL MAPPING. DIRICHLET'S PROBLEM	221
1. The Riemann Mapping Theorem	221
1.1. Statement and Proof	221
1.2. Boundary Behavior	224
1.3. Use of the Reflection Principle	225
1.4. Analytic Arcs	226
2. Conformal Mapping of Polygons	227
2.1. The Behavior at an Angle	227
2.2. The Schwarz-Christoffel Formula	228
2.3. Mapping on a Rectangle	230
2.4. The Triangle Functions of Schwarz	233
3. A Closer Look at Harmonic Functions	233
3.1. Functions with the Mean-value Property	234
3.2. Harnack's Principle	235
4. The Dirichlet Problem	237
4.1. Subharmonic Functions	237
4.2. Solution of Dirichlet's Problem	240
5. Canonical Mappings of Multiply Connected Regions	243
5.1. Harmonic Measures	244
5.2. Green's Function	249
5.3. Parallel Slit Regions	251
CHAPTER 7: ELLIPTIC FUNCTIONS	255
1. Simply Periodic Functions	255
1.1. Representation by Exponentials	255
1.2. The Fourier Development	256
1.3. Functions of Finite Order	256
2. Doubly Periodic Functions	257
2.1. The Period Module	257
2.2. Unimodular Transformations	258
2.3. The Canonical Basis	260
2.4. General Properties of Elliptic Functions	262
3. The Weierstrass Theory	264
3.1. The Weierstrass $\wp$ -function	264
3.2. The Functions $\zeta(z)$ and $\sigma(z)$	265
3.3. The Differential Equation	267
3.4. The Modular Function $\lambda(\tau)$	269
3.5. The Conformal Mapping by $\lambda(\tau)$	271

CHAPTER 8: GLOBAL ANALYTIC FUNCTIONS 275

1. <i>Analytic Continuation</i>	275
1.1. General Analytic Functions	275
1.2. The Riemann Surface of a Function	277
1.3. Analytic Continuation along Arcs	278
1.4. Homotopic Curves	281
1.5. The Monodromy Theorem	285
1.6. Branch Points	287
2. <i>Algebraic Functions</i>	291
2.1. The Resultant of Two Polynomials	291
2.2. Definition and Properties of Algebraic Functions	292
2.3. Behavior at the Critical Points	294
3. <i>Picard's Theorem</i>	297
3.1. Lacunary Values	297
4. <i>Linear Differential Equations</i>	299
4.1. Ordinary Points	300
4.2. Regular Singular Points	302
4.3. Solutions at Infinity	304
4.4. The Hypergeometric Differential Equation	305
4.5. Riemann's Point of View	309
<i>Index</i>	313
