Table of Contents

Chapter I. Positive Matrices 1

Introduction 1
§ 1. Linear Operators on $\mathbb{C}^n$ 2
§ 2. Positive Matrices 6
§ 3. Mean Ergodicity 9
§ 4. Stochastic Matrices 12
§ 5. Doubly Stochastic Matrices 15
§ 6. Irreducible Positive Matrices 19
§ 7. Primitive Matrices 24
§ 8. Invariant Ideals 26
§ 9. Markov Chains 31
§ 10. Bounds for Eigenvalues 38
Notes 41
Exercises 42

Chapter II. Banach Lattices. 46

Introduction 46
§ 1. Vector Lattices over the Real Field 47
§ 2. Ideals, Bands, and Projections 56
§ 3. Maximal and Minimal Ideals. Vector Lattices of Finite Dimension. . 65
§ 4. Duality of Vector Lattices 71
§ 5. Normed Vector Lattices 81
§ 6. Quasi-Interior Positive Elements 96
§ 7. Abstract M-Spaces 101
§ 8. Abstract L-Spaces 112
§ 9. Duality of AM- and AL-Spaces. The Dunford-Pettis Property 121
§ 10. Weak Convergence of Measures 129
§ 11. Complexification 133
Notes 138
Exercises 140

Chapter III. Ideal and Operator Theory 154

Introduction 154
§ 1. The Lattice of Closed Ideals 155
§ 2. Prime Ideals 158

§ 3. Valuations . . . 161
§ 4. Compact Spaces of Valuations . . . 165
§ 5. Representation by Continuous Functions . . . 169
§ 6. The Stone Approximation Theorem . . . 176
§ 7. Mean Ergodic Semi-Groups of Operators . . . 178
§ 8. Operator Invariant Ideals . . . 186
§ 9. Homomorphisms of Vector Lattices . . . 194
§ 10. Irreducible Groups of Positive Operators. The Halmos-von Neumann Theorem . . . 201
§ 11. Positive Projections . . . 208
Notes . . . 216
Exercises . . . 217

Chapter IV. Lattices of Operators . . . 227

Introduction . . . 227
§ 1. The Modulus of a Linear Operator . . . 228
§ 2. Preliminaries on Tensor Products. New Characterization of AM- and AL-Spaces . . . 235
§ 3. Cone Absolutely Summing and Majorizing Maps . . . 243
§ 4. Banach Lattices of Operators . . . 250
§ 5. Integral Linear Mappings . . . 255
§ 6. Hilbert-Schmidt Operators and Hilbert Lattices . . . 265
§ 7. Tensor Products of Banach Lattices . . . 273
§ 8. Banach Lattices of Compact Maps. Examples . . . 280
§ 9. Operators Defined by Measurable Kernels . . . 284
§ 10. Compactness of Kernel Operators . . . 290
Notes . . . 294
Exercises . . . 296

Chapter V. Applications . . . 308

Introduction . . . 308
§ 1. An Imbedding Procedure . . . 309
§ 2. Approximation of Lattice Homomorphisms (Korovkin Theory) . . . 311
§ 3. Banach Lattices and Cyclic Banach Spaces . . . 315
§ 4. The Peripheral Spectrum of Positive Operators . . . 322
§ 5. The Peripheral Point Spectrum of Irreducible Positive Operators . . . 328
§ 6. Topological Nilpotency of Irreducible Positive Operators . . . 333
§ 7. Application to Non-Positive Operators . . . 338
§ 8. Mean Ergodicity of Order Contractive Semi-Groups. The Little Riesz Theorem . . . 343
Notes . . . 349
Exercises . . . 350

Bibliography . . . 356

Index of Symbols . . . 370

Subject Index . . . 372
