## Preface

Part 1: Spectral representation results related to the differential expression $D = \frac{1}{2\pi i} \frac{d}{dx}$ .	1
1.1 The Hilbert space approach for the differential operator $D$ .	3
1.1.1 Selfadjoint realizations of the operator $D$ in the case of a bounded interval. The Fourier series.	6
1.1.2 Selfadjoint realization of the operator $D$ in the case of an unbounded interval. The Fourier transform.	18
1.1.2.1 Basic Properties of the Fourier Transform.	21
1.1.2.2 Tempered Sobolev spaces.	23
1.1.2.3 The Hartley transform.	52
1.1.3 Functions of $D$ in the case of an unbounded interval.	57
1.1.3.1 Differential operators with constant coefficients.	57
1.1.3.2 Convolutions.	60
1.1.3.2.1 Hilbert transform.	69
1.1.3.2.2 Abel transform.	80
1.1.3.3 The sampling theorem for the Fourier transform.	85
1.1.4 On almost periodic functions.	92
1.1.5 The higher-dimensional Fourier transform as a spectral representation.	95
1.2 A selfadjoint realization of the differential expression $D + i\nu$ , $\nu \in \mathbb{R}$ . The Laplace transform.	99
1.3 A selfadjoint realization of the differential expression $D + i\nu_1 + 2im\nu_2$ , $\nu_1, \nu_2 \in \mathbb{R}$ . The Gauss-Weierstrass transform.	103
1.4 A selfadjoint realization of the differential expression $m D + i\nu$ , $\nu \in \mathbb{R}$ . The Mellin transform.	106
1.5 A comment on extensions of the theory. Selfadjoint realizations for general differential expression of the form $p D q$ .	111

Part 2:	Spectral results related to some formally selfadjoint differential expressions of second order.	115
2.1	Some polynomial eigensolutions.	122
2.1.1	Legendre polynomials.	122
2.1.2	Gegenbauer polynomials.	125
2.1.3	Jacobi polynomials.	131
2.1.4	Chebyscheff polynomials.	137
2.1.5	Hermite polynomials.	137
2.1.6	Laguerre polynomials.	138
2.2	Spectral results related to the differential expression $D^2$ . The one-sided Fourier sine and Fourier cosine transform.	142
2.3	The Hankel transform as a spectral representation related to the differential expression $m^{-1} 2\pi D m 2\pi D + \nu^2 m^{-2}$ , $\nu \in \mathbb{R}$ .	145
2.4	The Lebedev transform as a spectral representation related to the differential expression $m 2\pi D m 2\pi D + m^2$ .	151
2.5	The (generalized) Mehler transform as a spectral representation related to the differential expression $2\pi D (m^2-1) 2\pi D + \mu^2 (m^2-1)^{-1} - \frac{1}{4}$ , $\mu \in \mathbb{R}$ .	157
2.6	The Jacobi transform as a spectral representation for a selfadjoint realization of $(\alpha, \beta \in \mathbb{R})$	
	$(m-1)^{-\alpha} (m+1)^{-\beta} 2\pi D (m-1)^{\alpha+1} (m+1)^{\beta+1} 2\pi D - (\alpha+\beta+1)^2/4$ .	164
2.7	Excursion: A spectral representation associated with the differential expression $(2\pi D)^4$ .	175
Part 3:	Appendix: Tools from functional analysis.	181
References.		201
