## CHAPTER I

### Basic Concepts of Elementary Probability Theory

§ 1. Experiments with Equally Probable Outcomes . . . . .	1
1. Experiments with a Finite Number of Equally Probable Outcomes . . . . .	1
2. Some Combinatorial Formulas . . . . .	3
3. "Geometric" Probabilities . . . . .	7
§ 2. The Space of Elementary Events and the Law of Composition of Probabilities . . . . .	10
1. Combination of Events . . . . .	10
2. The Space of Elementary Events . . . . .	11
3. The Law of Composition of Probabilities . . . . .	13
§ 3. The Relation between Various Events . . . . .	16
1. Conditional Probabilities . . . . .	16
2. Independent Events . . . . .	21
3. The Amount of Information . . . . .	23
§ 4. Random Variables . . . . .	27
1. Random Variables and their Probability Distributions . . . . .	27
2. Mathematical Expectation, Variance and Correlation Coefficient . . . . .	32
3. Integral-Valued Variables and Generating Functions . . . . .	35
§ 5. Some Probability Distributions . . . . .	37
1. Probability Distributions Connected with the Poisson Law . . . . .	37
2. Probability Distributions Connected with the Normal Law . . . . .	39
3. Probability Distributions Connected with Bernoulli Trials . . . . .	47
4. Some Probability Distributions Arising in the Scheme of the Symmetric Random Walk . . . . .	51

## CHAPTER II

### Spaces and Measures

§ 1. Some Facts about Measurable and Topological Spaces . . . . .	56
1. Measurable and Topological Spaces . . . . .	56
2. Linear Spaces . . . . .	65
§ 2. Distributions and Measures . . . . .	71
1. Measures in Measurable Spaces . . . . .	71
2. Measures in Topological Spaces . . . . .	75
3. Joint Distributions . . . . .	78

§ 3. Measures and Integrals . . . . .	81
1. The Integral and its Properties . . . . .	81
2. Abstract Measures and Integrals . . . . .	91

CHAPTER III

Basic Concepts of Probability Theory

§ 1. Spaces of Elementary Events. Probability Distributions and Characteristic Functions . . . . .	99
1. Basic Schemes of Probability Theory . . . . .	99
2. Relations Among Various Events and Random Variables . . . . .	104
3. Random Processes and their Probability Distributions . . . . .	113
§ 2. Basic Types of Random Processes . . . . .	119
1. Random Processes Considered as Curves in Hilbert Space . . . . .	119
2. Gaussian Random Processes . . . . .	126
3. Martingales and Stochastic Integrals . . . . .	135
4. Markov Random Processes . . . . .	140
5. Homogeneous and Stationary Random Processes . . . . .	145

CHAPTER IV

Limit Theorems in Probability Theory

§ 1. Distributions and their Characteristic Functions . . . . .	150
1. One-to-one Correspondance between Distributions and Characteristic Functions . . . . .	150
2. Inversion Formulas . . . . .	153
3. Properties of Distributions in Terms of Characteristic Functions . . . . .	155
§ 2. Estimates of the Nearness of Distributions in Terms of the Nearness of their Characteristic Functions . . . . .	160
1. Uniform Distances . . . . .	160
2. The Multi-Dimensional Case . . . . .	162
§ 3. Moments and Semi-Invariants . . . . .	163
1. Formal Relations . . . . .	163
2. The Moment Problem . . . . .	166
3. Inequalities . . . . .	167
4. Convergence of Moments . . . . .	169
§ 4. Infinitely Divisible Distributions and their Connection with Limit Theorems . . . . .	171
1. Definition and Connection with Limit Theorems . . . . .	171
2. Properties of Infinitely Divisible Laws . . . . .	173
§ 5. Sequences of Independent Random Variables (General Properties) . . . . .	174

§ 6. Sequences of Independent Random Variables. Convergence to the Normal Law . . . . .	179
1. Conditions for Convergence . . . . .	179
2. Sharpenings . . . . .	180
3. The Binomial Distribution . . . . .	183
4. The Multi-Dimensional Case . . . . .	185
§ 7. Sequences of Independent Random Variables. Convergence to Stable Laws . . . . .	186
1. Definition and Some Properties of Stable Laws . . . . .	186
2. Conditions for Convergence. Sharpenings . . . . .	188
§ 8. Local Theorems for Lattice-Distributions . . . . .	190
1. Asymptotic Uniform Distributions . . . . .	190
2. Integral-Valued Identically Distributed Terms . . . . .	191
§ 9. Local Theorems for Densities . . . . .	192
§ 10. Probabilities of Large Deviations. Inequalities and Asymptotic Formulas . . . . .	194
§ 11. Concluding Remarks . . . . .	198

## CHAPTER V

## Markov Processes

§ 1. Markov Processes with a Finite or Denumerable Number of States (Markov Chains) . . . . .	203
1. Markov Property and Transition Probabilities . . . . .	203
2. Classification of States of a Homogeneous Markov Chain . . . . .	213
3. Ergodic Properties of Homogeneous Markov Chains . . . . .	218
4. General Markov Jump Processes . . . . .	223
§ 2. Branching Processes . . . . .	225
1. General Description of a Branching Process . . . . .	225
2. Branching Processes with One Type of Particles . . . . .	227
§ 3. Random Processes with Independent Increments . . . . .	238
1. Sequences of Sums of an Increasing Number of Independent Random Variables . . . . .	238
2. The Brownian Motion Process . . . . .	242
3. Structure of Random Processes with Independent Increments . . . . .	251
§ 4. Diffusion Processes . . . . .	258
1. Differential and Stochastic Equations . . . . .	258
2. The Behavior of Homogeneous Diffusion Processes on the Boundary. Ergodic Properties . . . . .	265
3. Transformations of Diffusion Processes . . . . .	274

4. The Kolmogorov Backward Equation and the Probability Distribution of Some Functionals of a Diffusion Process . . . . .	280
5. Multi-Dimensional Diffusion Processes . . . . .	282
§ 5. General Markov Processes and their Characteristics . . . . .	286
1. Semigroups Corresponding to Transition Functions, and their Infinitesimal Operators . . . . .	286
2. Infinitesimal Operators, Harmonic and Excessive Functions . . . . .	289
§ 6. Controlled Markov Processes . . . . .	293
1. Controlled Markov Sequences . . . . .	293
2. Control in the Case of Incomplete Data . . . . .	298
3. Controlled Diffusion Processes . . . . .	301

## CHAPTER VI

## Stationary Processes

§ 1. Spectral Theory of Harmonizable Processes . . . . .	304
1. Linear Transformations . . . . .	304
2. Regular Stationary Processes . . . . .	310
3. Linear Prediction of Stationary Processes . . . . .	315
4. Physical Interpretation of the Spectral Representation . . . . .	329
5. Multi-Dimensional Stationary Processes . . . . .	332
6. Generalized Stationary Processes and Processes with Stationary Increments . . . . .	339
7. Harmonizable Random Processes. Some Non-Linear Transformations . . . . .	344
§ 2. Stationary Processes in the Strict Sense . . . . .	350
1. Ergodic Properties . . . . .	350
2. General Ergodic Properties. Their Application to Markov Processes . . . . .	353
3. Spectral Conditions for the Ergodicity of Some Stationary Processes . . . . .	360
§ 3. Stationary Gaussian Processes . . . . .	364
1. Some Properties of the Trajectories . . . . .	364
2. Exits of a Stationary Gaussian Process Beyond a Given Level . . . . .	367
3. Equivalence of Probability Distributions of Stationary Gaussian Processes . . . . .	370
§ 4. Elements of the Mathematical Theory of the Transmission of Information through Stationary Communication Channels . . . . .	374
1. Fundamental Results on the Possibility of Transmitting Informations . . . . .	374
2. Formulas for the Amount of Information . . . . .	380
Bibliography . . . . .	388
Subject Index . . . . .	395
