

Contents

Preface	ix
<i>Chapter I</i>	
<i>Events and Probability</i>	
§ 1. The Object of Probability Theory	1
§ 2. Events and Sets	1
§ 3. Examples of Events	3
§ 4. The Space of Elementary Events. Events	4
§ 5. Relations Between Operations on Events	9
§ 6. Axiomatic Definition of Probability	13
§ 7. Examples	18
<i>Chapter II</i>	
<i>Probabilities in the Most Important Spaces of Elementary Events</i>	
§ 8. At Most Countable Spaces of Elementary Events	21
§ 9. Field of Events on the Real Line	22
§ 10. Probability on S_0	25
§ 11. Theorem on Extension of Measures	31
§ 12. Probability Distributions on the Real Line	40
§ 13. Probability Distributions in Multidimensional Euclidean Spaces	42
§ 14. Classification of Probability Distributions on the Real Line	51
<i>Chapter III</i>	
<i>Conditional Probability. Stochastic Independence of Events</i>	
§ 15. Conditional Probability	54
§ 16. Bayes' Theorem. Probabilities of Causes	59
§ 17. Stochastic Independence of Events	61
§ 18. Independent Trials	64
§ 19. Probabilities in Cartesian Products	66
<i>Chapter IV</i>	
<i>Classical Limit Theorems</i>	
§ 20. Binomial Distribution	74
§ 21. Poisson Theorem and Poisson Distribution	78
§ 22. The de Moivre-Laplace Theorem	80

Chapter V
Random Variables

§ 23. Random Variable and its Formal Properties	93
§ 24. Expectations of Random Variables which Assume a Finite Number of Values	102
§ 25. Expectation of a Random Variable in the General Case	106
§ 26. Expectation and Integration. Probability Distribution Function and Probability Distribution of a Random Variable	111
§ 27. Variance, Moments, and Other Numerical Characteristics of the Distribution of a Random Variable	115

Chapter VI
Laws of Large Numbers

§ 28. Independence of Random Variables. Additivity of Variance	122
§ 29. Čebyšev Inequality	127
§ 30. Empirical Distribution Function and Sample Characteristics	128
§ 31. Weak Law of Large Numbers. Convergence in Probability and Convergence with Probability One	130
§ 32. Strong Law of Large Numbers	135
§ 33. On the Convergence of Sample Characteristics	142
§ 34. Complements and Examples	148

Chapter VII
Central Limit Theorems of Probability Theory

§ 35. Generating Functions	153
§ 36. Characteristic Functions	158
§ 37. Characteristic Function of Some Important Distributions. Additivity of These Distributions	172
§ 38. Central Limit Theorem of Probability Theory	179
§ 39. Distributions Connected with the Normal Distribution which Occurs in Statistics	187
§ 40. Covariance Matrix of a Probability Distribution in a Multidimensional Euclidean Space	197
§ 41. Characteristic Functions of Multidimensional Random Variables	209
§ 42. Multidimensional Normal Distribution	212
§ 43. Multidimensional Form of the Central Limit Theorem of Probability Theory	225
§ 44. Limit Distributions of Sample Statistics	227

Chapter VIII
Statistical Inference

§ 45. Examples of Tests Related to the Normal Distribution	237
§ 46. Tests Based on Limit Theorems	254
§ 47. Most Powerful and Uniformly Most Powerful Tests	268
§ 48. Problem of Discrimination	282
§ 49. Problem of Estimation. Bayesian Estimates	289
§ 50. Interval Estimation. Confidence Intervals	292
§ 51. Maximum Likelihood Estimators	296
§ 52. Unbiased Estimators with Minimum Variance. Informational Inequality	299
§ 53. Statistical Decision Function. Minimax Estimators	305
References	315
Index	317
