

CONTENTS

1. A historical survey

1.0 Introduction and motivation	1
1.1 Bachelier's derivation	5
1.2 Schrödinger's derivation	7
1.3 Smoluchowski's derivation	12
1.4 Tweedie's rationale	14
1.5 Wald's derivation	15
1.6 Huff's derivation	16
1.7 A heuristic derivation	20
1.8 Martingale methods	23
1.9 Halphen's laws	26
Further results and exercises	30

2. Properties of the inverse Gaussian distribution

2.0 Introduction	33
2.1 Natural exponential families	34
2.2 The inverse Gaussian law and natural exponential families	39
2.3 General exponential families	50
2.4 Analogies with the Gaussian law	53
2.5 Reproductive exponential families	61
2.6 Saddle-point approximation and the inverse Gaussian law	69
2.7 Barndorff-Nielsen's p^* formula and the inverse Gaussian law	74
2.8 Miscellaneous results	76
2.9 The distribution function	81
2.10 Notes and additional comments	85
Further results and exercises	86

3. Characterizations

3.0 Introduction	94
------------------	----

3.1	Characterizations analogous to the Gaussian law	94
3.2	Characterization by constant regression	100
3.3	Characterization by random continued fractions	102
3.4	Characterization by relation between $\mathbb{E}(X^{-1})$ and $\mathbb{E}(X)$ for exponential family on \mathbb{R}^+	108
	Further results and exercises	115
4.	Combinations, extensions, and relatives	
4.0	Introduction	117
4.1	A class of finite mixtures	117
4.2	Multivariate distributions	123
4.3	Combinations-models generated by IG/RIG laws	132
4.4	Kolmogorov–Smirnov statistics and the inverse Gaussian law	135
4.5	Miscellaneous results	139
4.6	Notes and additional comments	141
	Further results and exercises	142
5.	Inverse natural exponential families on \mathbb{R}	
5.0	Introduction	146
5.1	The class \mathcal{M} and inversion in \mathcal{M}	146
5.2	Inverse pair of natural exponential families on \mathbb{R}	152
5.3	Convolutions of positive measures	153
5.4	Mora–Morris classification of cubic exponential families	156
5.5	Infinite divisibility	158
5.6	The Tweedie scale	165
5.7	Lévy processes on the real line	167
5.8	Right continuous random walks and inversion	170
	Further results and exercises	175
6.	Statistical properties	
6.0	Introduction	177
6.1	Estimation	177
6.2	Tests of hypotheses	183
6.3	Generalized linear models and the inverse Gaussian law	189
6.4	Regression methods	197

6.5 Bayesian inference	200
6.6 Simulation of inverse Gaussian variates	203
Further results and exercises	205
References	212
Author index	244
Subject index	252
