Preface	vii
Abbreviations and Notations	xv
CHAPTER 1	
Basic Concepts and Elementary Models	1
1. The Vocabulary of Probability Theory	1
2. Events and Probability	4
2.1. Probability Space	4
2.2. Two Elementary Probabilistic Models	7
3. Random Variables and Their Distributions	9
3.1. Random Variables	9
3.2. Cumulative Distribution Function	9
4. Conditional Probability and Independence	12
4.1. Independence of Events	12
4.2. Independence of Random Variables	15
5. Solving Elementary Problems	17
5.1. More Formulas	17
5.2. A Small Bestiary of Exercises	19
6. Counting and Probability	21
7. Concrete Probability Spaces	26
Illustration 1. A Simple Model in Genetics: Mendel's Law and Hardy–Weinberg's Theorem	31
Illustration 2. The Art of Counting: The Ballot Problem and the Reflection Principle	33
Illustration 3. Bertrand's Paradox	36
CHAPTER 2	
Discrete Probability	46
1. Discrete Random Elements	46

1.1. Discrete Probability Distributions	46
1.2. Expectation	50
1.3. Independence.	54
2. Variance and Chebyshev's Inequality	56
2.1. Mean and Variance	56
2.2. Chebyshev's Inequality	57
3. Generating Functions.	59
3.1. Definition and Basic Properties	59
3.2. Independence and Product of Generating Functions	62
Illustration 4. An Introduction to Population Theory: Galton–Watson's Branching Process	64
Illustration 5. Shannon's Source Coding Theorem: An Introduction to Information Theory	67

CHAPTER 3

Probability Densities	85
1. Expectation of Random Variables with a Density	85
1.1. Univariate Probability Densities	85
1.2. Mean and Variance	88
1.3. Chebyshev's Inequality	92
1.4. Characteristic Function of a Random Variable	94
2. Expectation of Functionals of Random Vectors	96
2.1. Multivariate Probability Densities.	96
2.2. Covariance, Cross-Covariance, and Correlation.	99
2.3. Characteristic Function of a Random Vector	104
3. Independence.	105
3.1. Independent Random Variables.	105
3.2. Independent Random Vectors	108
4. Random Variables That Are Not Discrete and Do Not Have a p.d.	109
4.1. The Abstract Definition of Expectation	110
4.2. Lebesgue's Theorems and Applications	114
Illustration 6. Buffon's Needle: A Problem in Random Geometry	117

CHAPTER 4

Gauss and Poisson	128
1. Smooth Change of Variables	128
1.1. The Method of the Dummy Function	128
1.2. Examples.	130
2. Gaussian Vectors	132
2.1. Characteristic Function of Gaussian Vectors	132
2.2. Probability Density of a Nondegenerate Gaussian Vector	134
2.3. Moments of a Centered Gaussian Vector.	136
2.4. Random Variables Related to Gaussian Vectors	137
3. Poisson Processes.	140
3.1. Homogeneous Poisson Processes Over the Positive Half Line	140
3.2. Nonhomogeneous Poisson Processes Over the Positive Half Line	142
3.3. Homogeneous Poisson Processes on the Plane	144
4. Gaussian Stochastic Processes	146
4.1. Stochastic Processes and Their Law.	146

4.2. Gaussian Stochastic Processes	147
Illustration 7. An Introduction to Bayesian Decision Theory: Tests of Gaussian Hypotheses	148
CHAPTER 5	
Convergences	163
1. Almost-Sure Convergence	163
1.1. The Borel–Cantelli Lemma	163
1.2. A Criterion for Almost-Sure Convergence	165
1.3. The Strong Law of Large Numbers	166
2. Convergence in Law	168
2.1. Criterion of the Characteristic Function	168
2.2. The Central Limit Theorem	171
3. The Hierarchy of Convergences	175
3.1. Almost-Sure Convergence Versus Convergence in Probability	175
3.2. Convergence in the Quadratic Mean	176
3.3. Convergence in Law in the Hierarchy of Convergences	178
3.4. The Hierarchical Tableau	178
Illustration 8. A Statistical Procedure: The Chi-Square Test	180
Illustration 9. Introduction to Signal Theory: Filtering	185
Additional Exercises	193
Solutions to Additional Exercises	199
Index	205
