

CONTENTS

Chapter 1. Introduction and brief survey.

Section 1.1.	The aspects of multivariate analysis	1.1
1.2.	The literature	1.4
1.3.	History	1.5
1.4.	Inference	1.5
1.5.	On the organization of these notes	1.8
1.6.	Notations	1.9

Chapter 2. Transforms.

Section 2.0.	Introduction	2.1
2.1.	Definitions and uniqueness	2.2
2.2.	The multivariate normal density functions	2.6
2.3.	Noncentral Chi-square, F-, and t-density functions	2.10
2.4.	Inversion of transforms and Hermite polynomials	2.13
2.5.	Inversion of the Laplace and Mellin transforms	2.18
2.6.	Examples in the literature	2.19

Chapter 3. Locally compact groups and Haar measure.

Section 3.0.	Introduction	3.1
3.1.	Basic point set topology	3.2
3.2.	Quotient spaces	3.4
3.3.	Haar measure	3.5
3.4.	Factorization of measures	3.13
3.5.	Modular functions	3.17
3.6.	A remark on matrix groups	3.19
3.7.	Cross-sections	3.20
3.8.	Solvability	3.21

Chapter 4. Wishart's paper.

Section 4.0.	Introduction	4.1
4.1.	Wishart's argument	4.1
4.2.	Related problems	4.4

Chapter 5. The noncentral Wishart density function.

Section 5.0.	Introduction	5.1
5.1.	James' method	5.1
5.2.	James on series, rank 3	5.5
5.3.	Problems	5.6

Chapter 6. Manifolds and exterior differential forms.

Section 6.0.	Introduction	6.1
6.1.	Basic structural definitions and assumptions	6.2
6.2.	Multilinear forms, algebraic theory	6.4
6.3.	Differential forms and the operator d .	6.10
6.4.	Theory of integration	6.16
6.5.	Transformation of manifolds	6.18
6.6.	A matrix lemma	6.22
6.7.	Problems	6.24

Chapter 7. Invariant measures on manifolds.

Section 7.0.	Introduction	7.1
7.1.	$\mathbb{R}_{nh}$	7.1
7.2.	Lower triangular matrices, left multiplication	7.2
7.3.	Lower triangular matrices, right multiplication	7.3
7.4.	The orthogonal group $O(n)$	7.3
7.5.	Grassman manifolds $G_{k,n-k}$	7.5
7.6.	Stiefel manifolds $V_{k,n}$	7.10
7.7.	Total mass on the Stiefel manifold, $k = 1$	7.11
7.8.	Mass on the Stiefel manifold, general case	7.12
7.9.	Total mass on the Grassman manifold $G_{k,n-k}$	7.13
7.10.	Problems	7.15

Chapter 8. Decomposition of matrices.

Section 8.1.	The Stiefel manifolds	8.1
8.2.	Symmetric matrices	8.1
8.3.	Decompositions of nonsingular $n \times n$ matrices	8.2
8.4.	Decompositions of $n \times k$ matrices of full rank $k \leq n$	8.3
8.5.	$n \times k$ not necessarily of full rank. Generalized inverses	8.5
8.6.	Boundaries of convex sets	8.9
8.7.	A second decomposition of $n \times k$ matrices X	8.11
8.8.	Canonical correlations and a decomposition of $n \times k$ matrices	8.11
8.9.	Problems	8.17

Chapter 9. Examples using differential forms.

Section 9.0.	Introduction	9.1
9.1.	Canonical correlations	9.3
9.2.	Hotelling T^2	9.10
9.3.	Eigenvalues of the sample covariance matrix $\underline{X}^t \underline{X}$	9.15
9.4.	Problems	9.17

Chapter 10. Cross sections and maximal invariants.

10.0.	Introduction	10.1
10.1.	Basic theory	10.4
10.2.	Examples	10.12
10.3.	The noncentral multivariate beta density function	10.22
10.4.	Problems	10.26

Chapter 11. Random variable techniques.

Section 11.0.	Introduction	11.1
11.1.	Random orthogonal matrices	11.4
11.2.	Decomposition of the sample covariance matrix using random variable techniques	11.5
11.3.	The generalized variance, zero means	11.8
11.4.	Noncentral Wishart, rank one means	11.9
11.5.	Hotelling T^2 , noncentral case	11.11
11.6.	Generalized variance, nonzero means	11.13
11.7.	Distribution of the sample correlation coefficient	11.14
11.8.	Multiple correlation, algebraic manipulations	11.16
11.9.	Distribution of the multiple correlation coefficient	11.19

11.10.	Best linear unbiased estimation	11.22
Section 11.10		
Subsections	BLUE: Best linear unbiased estimation, an algebraic theory	11.22
	Gauss Markov equations	11.26
	Solutions of the Gauss Markov equations	11.28
	Normal theory. Idempotents and Chi-squares	11.31
	Normal theory in the analysis of variance	11.32
11.11.	Problems	11.36
Chapter 12.	The construction of zonal polynomials.	
Section 12.0.	Introduction	12.1
12.1.	Kronecker products and homogeneous polynomials	12.5
12.2.	Symmetric polynomials in n variables	12.11
12.3.	The symmetric group algebra	12.16
12.4.	Young's symmetrizers	12.21
12.5.	Realization of the group algebra as linear transformations.	12.31
12.6.	The center of the bi-symmetric matrices, as an algebra	12.34
12.7.	Homogeneous polynomials II. Two sided unitary invariance	12.38
12.8.	Diagonal matrices	12.41
12.9.	Polynomials of diagonal matrices	12.46
12.10.	Zonal polynomials of real matrices	12.48
12.11.	Alternative definitions of zonal polynomials. Group characters	12.58
12.12.	Third construction of zonal polynomials. The converse theorem	12.67
Chapter 13.	Problems for users of zonal polynomials.	
Section 13.0.	Introduction	13.1
13.1.	Theory (problems)	13.1
13.2.	Numerical identities (problems)	13.7
13.3.	Coefficients of series (examples)	13.9
13.4.	On group representations (problems on theory)	13.15
13.5.	First construction of zonal polynomials	13.16
13.6.	A teaching version	13.19
Chapter 14.	Some references	14.1
