Chapter 1 Parameter estimation and testing hypotheses in nonlinear models

1.1	Parameter estimation in nonlinear models	21
1.1.1	Introduction	21
1.1.2	Examples	22
1.1.3	Least squares estimation	24
1.1.4	Linearization	26
1.1.5	Consistency and asymptotic distribution of the least squares estimation	30
1.1.5.1	Introduction	30
1.1.5.2	The model and assumptions	31
1.1.5.3	Consistency	33
1.1.5.4	Further assumptions	38
1.1.5.5	Asymptotic distributions	39
1.1.5.6	Special cases and related results	43
1.1.6	Asymptotic optimality	47
1.1.7	Asymptotic results for estimators and tests of the variance	59
1.1.8	Tests and confidence regions for regression coefficients	67
1.2	Switching regression models	73
1.2.1	Introduction	73
1.2.2	Ordered models with abrupt state switching	78
1.2.2.1	The model	78
1.2.2.2	Least squares estimators	80
1.2.2.3	Testing the presence of a state switching	82
1.2.3	Models with continuous state switching	89
1.2.3.1	The model	89
1.2.3.2	Least squares estimators	90
1.2.3.3	Some testing problems	92
1.2.4	Some asymptotic results on least squares estimators in ordered models with state switching	96
1.2.5	Some other models with state switching	103
1.2.6	Methods of identification of state switching in models with unknown number of states	104
1.3	Some topics in nonparametric regression	105
1.3.1	Introduction	105
1.3.2	Optimal rates of convergence	109
1.3.3	Spline smoothing	115
1.3.4	Optimal rates and exact constant	117
1.3.5	Some further topics	123

14	Contents	
1.4	References	125
1.4.1	References for Section 1.1	125
1.4.2	References for Section 1.2	128
1.4.3	References for Section 1.3	130

Chapter 2 Robust statistical inference in linear models

2.1	General remarks on robustness	134
2.2	Robust alternatives to the method of least squares.....	136
2.2.1	L-estimators	137
2.2.2	M-estimators	138
2.2.3	R-estimators	139
2.3	Properties of M-estimators	141
2.3.1	Finite sample minimax properties of M-estimators in the location model	142
2.3.2	Alternative choice of the φ -function	146
2.3.3	Computational aspects and numerical algorithms	148
2.3.4	Asymptotic properties of M-estimators	152
2.3.4.1	Asymptotic normality of M-estimators	152
2.3.4.2	Asymptotic minimax properties of M-, R-, and L-estimators	160
2.4	Some properties of rank tests	164
2.4.1	Locally most powerful rank tests	166
2.4.2	Asymptotic behaviour of rank and signed-rank test statistics	170
2.5	Estimators of regression coefficients based on rank tests	178
2.5.1	Asymptotic normality of R-estimators	179
2.5.2	Linearized rank estimators and their asymptotic distribution	185
2.5.3	Adaptive rank estimators	187
2.6	Asymptotic comparison of different estimation procedures	191
2.6.1	Asymptotic distribution of the difference of M- and R-estimators	191
2.6.2	Asymptotic distribution of the difference of linearized rank estimator and R-estimator	193
2.7	Confidence intervals for regression coefficients based on ranks	194
2.7.1	Asymptotic efficiency of rank confidence intervals	196
2.7.2	Bounded length confidence intervals based on the Wilcoxon test.....	199
2.8	References	202

Chapter 3 Models with errors-in-variables

3.1	Models with errors-in-variables	214
3.1.1	Functional and structural relations — an introduction	214
3.1.2	Comparison with regression models	217
3.1.3	Models with errors-in-variables	220
3.1.3.1	The fundamental model	220
3.1.3.2	Linear functional relations	225
3.1.3.3	Linear functional relations with fixed experimental design and with linear regression part	227
3.1.3.4	General models with errors-in-variables	228
3.1.3.5	Regression models	229
3.1.3.6	Functional relations with random experimental design	231
3.1.4	Identifiability	232

3.1.5.	On the existence of consistent estimators under a nonrandom experimental design	238
3.1.6	Bibliographic remarks	240
3.2	Maximum likelihood estimators	247
3.2.1	Bivariate linear functional relations	247
3.2.1.1	The general model	247
3.2.1.2	Replicated observations	249
3.2.1.3	Observations without replications	253
3.2.2	Maximum likelihood and least squares estimators	255
3.2.2.1	Estimation procedures for models with errors-in-variables	255
3.2.2.2	Maximum likelihood estimation	256
3.2.2.3	Least squares estimation	256
3.2.2.4	Measurability and uniqueness	258
3.2.3	Linear functional relations with nonrandom experimental design and known covariance	258
3.2.3.1	The model	258
3.2.3.2	Least squares estimation	259
3.2.3.3	Equivariance	263
3.2.3.4	Linear functional relations with nonrandom nonobservable variables and linear regression part	264
3.2.4	Linear functional relations with nonrandom experimental design and covariance known up to a factor	264
3.2.5	Linear functional relations with nonrandom experimental design under independent normally distributed errors	266
3.2.6	Nonlinear models with known error covariance	273
3.2.7	Models with unknown error covariance under normally distributed errors	277
3.3	Further estimation procedures	278
3.3.1	Linear functional relations with independent errors	279
3.3.1.1	Introduction	279
3.3.1.2	Ordinary and orthogonal least squares estimation	279
3.3.1.3	Instrumental variables	280
3.3.1.4	Use of variance components	283
3.3.1.5	Limited-information maximum likelihood and two-stage least squares estimators	283
3.3.1.6	Modified maximum likelihood estimation	285
3.3.2	Linear functional relations with dependent errors	287
3.3.3	Nonlinear models with independent errors	291
3.3.3.1	Modified least squares estimation	291
3.3.3.2	Different covariances	294
3.3.3.3	Unknown different covariances	294
3.3.4	Estimation with instrumental variables in linear functional relations	295
3.3.4.1	Introduction	295
3.3.4.2	A general model for linear functional relations with nonrandom unobservable variables	296
3.3.4.3	Maximum likelihood estimation in linear functional relations with nonrandom unobservable variables	303
3.3.4.4	Estimation using instrumental variables in linear functional relations	309
3.3.4.5	Estimation using instrumental variables in linear functional relations with nonrandom unobservable variables	315
3.4	Asymptotic theory for linear functional relations with nonrandom unobservable variables and with independent errors	316
3.4.1	Introduction	316

3.4.2	Consistency	325
3.4.3	Examples	332
3.4.4	Asymptotic normality under normal distribution	336
3.4.5	Asymptotic efficiency	343
3.4.6	The general nonnormal case	356
3.4.7	Final remarks	360
3.5	Special asymptotics	362
3.5.1	Asymptotics under fixed experimental design	363
3.5.1.1	The model	363
3.5.1.2	Asymptotics for maximum likelihood estimators	364
3.5.1.3	The information matrix under a normal distribution	365
3.5.1.4	Asymptotics for weighted least squares estimators	365
3.5.1.5	Asymptotic optimality of weighted least squares estimators	368
3.5.1.6	Asymptotic covariance of the estimator of the structural parameters ..	369
3.5.2	Comparison of MLE and two-stage LSE in linear functional relations with nonrandom unobservable variables	371
3.5.3	Comparison of modified MLE and two-stage LSE in linear functional re- lations with nonrandom unobservable variables	373
3.5.4	Asymptotics under dependent errors in linear functional relations	375
3.5.4.1	Minimum contrast estimation	375
3.5.4.2	Identifiability	377
3.5.5	Nonlinear models with increasing experimental design	378
3.6	Testing hypotheses in linear functional relations	384
3.6.1	Tests on the dimension of the subspace	385
3.6.2	Tests under a given subspace	386
3.6.3	Tests on the existence of a linear functional relation	387
3.7	Confidence regions in linear functional relations	388
3.7.1	The case of subspaces of codimension one	388
3.7.2	Consistency of confidence regions	389
3.7.3	Bivariate linear models	389
3.8	Numerics	390
3.8.1	Linear functional relations	390
3.8.1.1	Bivariate linear functional relations with nonrandom unobservable varia- bles	390
3.8.1.2	Bivariate linear functional relations with random unobservable variables	391
3.8.1.3	Multivariate linear functional relationships with nonrandom unobservable variables	392
3.8.2	Bivariate polynomial relations	392
3.8.2.1	Polynomial relations	392
3.8.2.2	Newton-Raphson procedures	392
3.8.2.3	The algorithm	393
3.8.3	General models with errors-in-variables	394
3.8.3.1	Conditions for an application of the procedures	394
3.8.3.2	Gauss-Newton procedures	395
3.8.3.3	Simplified Gauss-Newton procedures	396
3.8.3.4	Modified Gauss-Newton procedures	397
3.8.3.5	Newton-Raphson procedures	397
3.9	References	398
3.9.1	References for errors-in-variables models	398
3.9.2	Further references	412

A	Appendices	415
A1	Linear algebra	415
A2	Asymptotics	417
A3	Addenda	426
A4	Notation and terminology	432
A4.1	Abbreviations	432
A4.2	Vectors, matrices, spaces	433
A4.3	Sets and functions	435
A4.4	Random variables and models	436
A4.5	Distributions and measures	437
A4.6	Convergence	438
A4.7	Sample functions	438
