

Preface vii

Introduction ix

I. Number Systems and Errors	I
1.1 The Representation of Integers	1
1.2 The Representation of Fractions	4
1.3 Floating-point Arithmetic	7
1.4 Error Propagation; Significance Errors and Instability	10
1.5 Computational Methods for Error Estimation	15
1.6 Some Comments on Convergence of Sequences	17
1.7 Some Mathematical Preliminaries	21
2. The Solution of Nonlinear Equations	27
2.1 A Survey of Iterative Methods	28
2.2 FORTRAN Programs for Some Iterative Methods	35
2.3 Fixed-point Iteration	44
2.4 Convergence Acceleration for Fixed-point Iteration	50
2.5 Quadratic Convergence and Newton's Method	57
2.6 Polynomial Equations: Real Roots	66
2.7 Complex Roots and Muller's Method	74
2.8 Simultaneous Nonlinear Equations	84
3. Matrices and Systems of Linear Equations	91
3.1 Properties of Matrices	91
3.2 The Solution of Linear Systems by Elimination	110
3.3 The Pivoting Strategy	123
3.4 The Triangular Factorization and Calculation of the Inverse	127
*3.5 Compact Schemes	137
3.6 Error and Residual of an Approximate Solution; Norms	142
3.7 The Condition Number and Iterative Improvement	150
3.8 Iterative Methods	157
3.9 Eigenvalues and the Convergence of Fixed-point Iteration	170
3.10 Determinants	180
3.11 The Eigenvalue Problem	184

4. Interpolation and Approximation	191
4.1 The Interpolating Polynomial: Lagrange Form	191
4.2 The Interpolating Polynomial: Newton Form	195
4.3 The Divided-difference Table	201
4.4 The Error of the Interpolating Polynomial	210
4.5 Interpolation in a Function Table Based on Equally Spaced Points	213
4.6 The Divided Difference as a Function of Its Arguments and Osculatory Interpolation	221
4.7 The Case for Piecewise-polynomial Interpolation	230
*4.8 Piecewise-cubic Interpolation	233
4.9 Data Fitting	241
*4.10 Orthogonal Polynomials	246
*4.11 Least-squares Approximation by Polynomials	255
*4.12 Chebyshev Economization	265
5. Differentiation and Integration	274
5.1 Numerical Differentiation	275
5.2 Numerical Integration: Some Basic Rules	284
5.3 Numerical Integration: Composite Rules	290
5.4 Numerical Integration: Gaussian Rules	299
5.5 Extrapolation to the Limit; Romberg Integration	307
6. The Solution of Differential Equations	319
6.1 Mathematical Preliminaries	320
6.2 Simple Difference Equations	322
6.3 Numerical Integration by Taylor Series	327
6.4 Error Estimates and Convergence of Euler's Method	332
6.5 Runge-Kutta Methods	336
6.6 Multistep Formulas	340
6.7 Predictor-Corrector Methods	346
6.8 The Adams-Moulton Method	350
6.9 Stability of Numerical Methods	357
6.10 Round-off-error Propagation	361
6.11 Systems of Differential Equations	365
7. Boundary-value Problems in Ordinary Differential Equations	373
7.1 Finite-difference Methods: Second-order Equations	374
7.2 Finite-difference Methods: Fourth-order Equations	379
7.3 Shooting Methods	382
<i>References</i>	388
<i>Index</i>	391
