

Preface	vii
1. Motivation, problem and notation	
1.1 Motivation	1
1.2 Problem formulation	1
1.3 Usual tools	2
1.4 Notation for polynomial acceleration	2
1.5 Minimal error and minimal residual	5
1.6 Approximation of the solution operator	6
1.7 Location of zeros	7
1.8 Heuristics	9
Comments to Chapter 1	11
2. Spectrum, resolvent and power boundedness	
2.1 The spectrum	13
2.2 The resolvent	17
2.3 The spectral mapping theorem	22
2.4 Continuity of the spectrum	23
2.5 Equivalent norms	26
2.6 The Yosida approximation	29
2.7 Power bounded operators	30
2.8 Minimal polynomials and algebraic operators	34
2.9 Quasialgebraic operators	41
2.10 Polynomial numerical hull	41
Comments to Chapter 2	44
3. Linear convergence	
3.1 Preliminaries	46
3.2 Generating functions and asymptotic convergence factors	47
3.3 Optimal reduction factor	52
3.4 Green's function for G_∞	57
3.5 Optimal polynomials for E	63
3.6 Simply connected $G_\infty(L)$	72
3.7 Stationary recursions	77
3.8 Simple examples	81
Comments to Chapter 3	85
4. Sublinear convergence	
4.1 Introduction	86
4.2 Convergence of $L^k(L - 1)$	88
4.3 Splitting into invariant subspaces	90
4.4 Uniform convergence	95
4.5 Nonisolated singularity and successive approximation	99
4.6 Nonisolated singularity and polynomial acceleration	103
4.7 Fractional powers of operators	111
4.8 Convergence of iterates	113
4.9 Convergence with speed	116
Comments to Chapter 4	123

5. Superlinear convergence	
5.1 What is superlinear	124
5.2 Introductory examples	125
5.3 Order and type	133
5.4 Finite termination	137
5.5 Lower and upper bounds for optimal polynomials	139
5.6 Infinite products	144
5.7 Almost algebraic operators	145
5.8 Estimates using singular values	157
5.9 Multiple clusters	163
5.10 Approximation with algebraic operators	165
5.11 Locally superlinear implies superlinear	177
Comments to Chapter 5	169
References	171
Definitions	175
