Preface	V
1 Introduction	1
1.1 Poisson Regression Model	1
1.2 Examples.....	2
1.3 Organization of the Book	4
2 Probability Models for Count Data	7
2.1 Introduction	7
2.2 Poisson Distribution	7
2.2.1 Definitions and Properties	7
2.2.2 Genesis of the Poisson Distribution	10
2.2.3 Poisson Process	11
2.2.4 Generalizations of the Poisson Process	14
2.2.5 Poisson Distribution as a Binomial Limit	15
2.2.6 Exponential Interarrival Times	16
2.2.7 Non-Poissonness	17
2.3 Further Distributions for Count Data	20
2.3.1 Negative Binomial Distribution	20
2.3.2 Binomial Distribution.....	25
2.3.3 Logarithmic Distribution	27
2.3.4 Summary.....	28
2.4 Modified Count Data Distributions	30
2.4.1 Truncation	30
2.4.2 Censoring and Grouping	31
2.4.3 Altered Distributions	32
2.5 Generalizations.....	33
2.5.1 Mixture Distributions	33
2.5.2 Compound Distributions	36
2.5.3 Birth Process Generalizations	39
2.5.4 Katz Family of Distributions.....	40

VIII Contents

2.5.5	Additive Log-Differenced Probability Models	41
2.5.6	Linear Exponential Families	42
2.5.7	Summary	44
2.6	Distributions for Over- and Underdispersion	45
2.6.1	Generalized Event Count Model	45
2.6.2	Generalized Poisson Distribution	46
2.6.3	Poisson Polynomial Distribution	47
2.6.4	Double Poisson Distribution	49
2.6.5	Summary	49
2.7	Duration Analysis and Count Data	50
2.7.1	Distributions for Interarrival Times	52
2.7.2	Renewal Processes	54
2.7.3	Gamma Count Distribution	56
2.7.4	Duration Mixture Models	59
3	Poisson Regression	63
3.1	Specification	63
3.1.1	Introduction	63
3.1.2	Assumptions of the Poisson Regression Model	63
3.1.3	Ordinary Least Squares and Other Alternatives	65
3.1.4	Interpretation of Parameters	70
3.1.5	Period at Risk	74
3.2	Maximum Likelihood Estimation	77
3.2.1	Introduction	77
3.2.2	Likelihood Function and Maximization	77
3.2.3	Newton-Raphson Algorithm	78
3.2.4	Properties of the Maximum Likelihood Estimator	80
3.2.5	Estimation of the Variance Matrix	82
3.2.6	Approximate Distribution of the Poisson Regression Coefficients	83
3.2.7	Bias Reduction Techniques	84
3.3	Pseudo-Maximum Likelihood	87
3.3.1	Linear Exponential Families	89
3.3.2	Biased Poisson Maximum Likelihood Inference	90
3.3.3	Robust Poisson Regression	91
3.3.4	Non-Parametric Variance Estimation	95
3.3.5	Poisson Regression and Log-Linear Models	97
3.3.6	Generalized Method of Moments	98
3.4	Sources of Misspecification	102
3.4.1	Mean Function	102
3.4.2	Unobserved Heterogeneity	103
3.4.3	Measurement Error	105
3.4.4	Dependent Process	107
3.4.5	Selectivity	107
3.4.6	Simultaneity and Endogeneity	108

3.4.7	Underreporting	109
3.4.8	Excess Zeros	109
3.4.9	Variance Function	110
3.5	Testing for Misspecification	112
3.5.1	Classical Specification Tests	112
3.5.2	Regression Based Tests	118
3.5.3	Goodness-of-Fit Tests	118
3.5.4	Tests for Non-Nested Models	120
3.6	Outlook	125
4	Unobserved Heterogeneity	127
4.1	Introduction	127
4.1.1	Conditional Mean Function	127
4.1.2	Partial Effects with Unobserved Heterogeneity	128
4.1.3	Unobserved Heterogeneity in the Poisson Model	129
4.1.4	Parametric and Semi-Parametric Models	130
4.2	Parametric Mixture Models	130
4.2.1	Gamma Mixture	131
4.2.2	Inverse Gaussian Mixture	131
4.2.3	Log-Normal Mixture	132
4.3	Negative Binomial Models	134
4.3.1	Negbin II Model	135
4.3.2	Negbin I Model	136
4.3.3	Negbin _k Model	136
4.3.4	Negbin _X Model	137
4.4	Semiparametric Mixture Models	138
4.4.1	Series Expansions	138
4.4.2	Finite Mixture Models	139
5	Sample Selection and Endogeneity	143
5.1	Censoring and Truncation	143
5.1.1	Truncated Count Data Models	144
5.1.2	Endogenous Sampling	144
5.1.3	Censored Count Data Models	146
5.1.4	Grouped Poisson Regression Model	147
5.2	Incidental Censoring and Truncation	148
5.2.1	Outcome and Selection Model	148
5.2.2	Models of Non-Random Selection	149
5.2.3	Bivariate Normal Error Distribution	150
5.2.4	Outcome Distribution	152
5.2.5	Incidental Censoring	153
5.2.6	Incidental Truncation	154
5.3	Endogeneity in Count Data Models	156
5.3.1	Introduction and Examples	156
5.3.2	Parameter Ancillarity	157

5.3.3	Endogeneity and Mean Function	159
5.3.4	A Two-Equation Framework	161
5.3.5	Instrumental Variable Estimation	162
5.3.6	Estimation in Stages	165
5.4	Switching Regression	167
5.4.1	Full Information Maximum Likelihood Estimation	168
5.4.2	Moment-Based Estimation	170
5.4.3	Non-Normality	171
5.5	Mixed Discrete-Continuous Models	171
6	Zeros in Count Data Models	173
6.1	Introduction	173
6.2	Zeros in the Poisson Model	174
6.2.1	Excess Zeros and Overdispersion	174
6.2.2	Two-Crossings Theorem	175
6.2.3	Effects at the Extensive Margin	176
6.2.4	Multi-Index Models	177
6.2.5	A General Decomposition Result	177
6.3	Hurdle Count Data Models	178
6.3.1	Hurdle Poisson Model	181
6.3.2	Marginal Effects	182
6.3.3	Hurdle Negative Binomial Model	183
6.3.4	Non-nested Hurdle Models	183
6.3.5	Unobserved Heterogeneity in Hurdle Models	185
6.3.6	Finite Mixture Versus Hurdle Models	186
6.3.7	Correlated Hurdle Models	187
6.4	Zero-Inflated Count Data Models	188
6.4.1	Introduction	188
6.4.2	Zero-Inflated Poisson Model	189
6.4.3	Zero-Inflated Negative Binomial Model	191
6.4.4	Marginal Effects	191
6.5	Compound Count Data Models	192
6.5.1	Multi-Episode Models	193
6.5.2	Underreporting	193
6.5.3	Count Amount Model	196
6.5.4	Endogenous Underreporting	197
6.6	Quantile Regression for Count Data	199
7	Correlated Count Data	203
7.1	Multivariate Count Data	203
7.1.1	Multivariate Poisson Distribution	205
7.1.2	Multivariate Negative Binomial Model	210
7.1.3	Multivariate Poisson-Gamma Mixture Model	212
7.1.4	Multivariate Poisson-Log-Normal Model	213
7.1.5	Latent Poisson-Normal Model	216

7.1.6	Moment-Based Methods.....	217
7.1.7	Copula Functions.....	219
7.2	Panel Data Models	220
7.2.1	Fixed Effects Poisson Model	222
7.2.2	Moment-based Estimation of the Fixed Effects Model ..	225
7.2.3	Fixed Effects Negative Binomial Model.....	227
7.2.4	Random Effects Count Data Models	228
7.2.5	Dynamic Panel Count Data Models.....	230
7.3	Time-Series Count Data Models	232
8	Bayesian Analysis of Count Data	241
8.1	Bayesian Analysis of the Poisson Model	242
8.2	A Poisson Model with Underreporting	245
8.3	Estimation of the Multivariate Poisson-Log-Normal Model by MCMC	247
8.4	Estimation of a Random Coefficients Model by MCMC.....	248
9	Applications	251
9.1	Accidents.....	251
9.2	Crime	252
9.3	Trip Frequency	252
9.4	Health Economics	254
9.5	Demography	257
9.6	Marketing and Management	260
9.7	Labor Mobility	261
9.7.1	Economics Models of Labor Mobility.....	262
9.7.2	Previous Literature	263
9.7.3	Data and Descriptive Statistics.....	265
9.7.4	Regression Results.....	269
9.7.5	Model Performance	272
9.7.6	Marginal Probability Effects	274
9.7.7	Structural Inferences.....	278
A	Probability Generating Functions	281
B	Gauss-Hermite Quadrature	285
C	Software	289
D	Tables	291
	References	299
	Author's Index	321
	Subject Index	327
