|          |                                                    |           |
|----------|----------------------------------------------------|-----------|
| <b>1</b> | <b>General introduction</b>                        | <b>1</b>  |
| 1.1      | An outline of the finite element method . . . . .  | 2         |
| 1.2      | General notions relative to meshes . . . . .       | 5         |
| 1.3      | An outline of the chapters . . . . .               | 11        |
| <b>2</b> | <b>General mesh description</b>                    | <b>13</b> |
| 2.1      | Introduction . . . . .                             | 13        |
| 2.2      | Constitutive information . . . . .                 | 14        |
| 2.3      | Internal representation . . . . .                  | 15        |
| 2.4      | Physical numbers . . . . .                         | 26        |
| <b>3</b> | <b>General methodology</b>                         | <b>29</b> |
| 3.1      | Introduction . . . . .                             | 29        |
| 3.2      | Some popular mesh generation methods . . . . .     | 30        |
| 3.3      | Top-down analysis of the geometry . . . . .        | 34        |
| 3.4      | The relevant attributes . . . . .                  | 38        |
| 3.5      | Minimal primal sub-sets . . . . .                  | 44        |
| 3.6      | Creating a mesh (bottom-up construction) . . . . . | 45        |
| <b>4</b> | <b>Primal sets (the data)</b>                      | <b>51</b> |
| 4.1      | Introduction . . . . .                             | 51        |
| 4.2      | Bottom-up data (construction) . . . . .            | 52        |
| 4.3      | Bottom-up data (interest) . . . . .                | 53        |
| 4.4      | Definitions of the basic items . . . . .           | 55        |
| 4.5      | Summary of the bottom-up construction . . . . .    | 58        |
| 4.6      | User data and mesh generator data . . . . .        | 58        |
| 4.7      | An example of bottom-up data . . . . .             | 60        |
| <b>5</b> | <b>Manual and semi-automatic methods</b>           | <b>65</b> |
| 5.1      | Introduction . . . . .                             | 65        |
| 5.2      | Manual method . . . . .                            | 65        |

|           |                                                  |            |
|-----------|--------------------------------------------------|------------|
| 5.3       | Hexahedral topologies . . . . .                  | 70         |
| 5.4       | Cylindrical topologies . . . . .                 | 72         |
| <b>6</b>  | <b>Transport-mapping methods</b>                 | <b>77</b>  |
| 6.1       | Introduction . . . . .                           | 77         |
| 6.2       | General principle of the method . . . . .        | 77         |
| 6.3       | Method based on the domain vertices . . . . .    | 79         |
| 6.4       | Method preserving a polygonal contour . . . . .  | 82         |
| 6.5       | Transport and deformation . . . . .              | 90         |
| 6.6       | Data description . . . . .                       | 92         |
| 6.7       | Application examples . . . . .                   | 94         |
| <b>7</b>  | <b>Mesh creation by solving a P.D.E.</b>         | <b>97</b>  |
| 7.1       | Introduction . . . . .                           | 97         |
| 7.2       | General principle of the method . . . . .        | 98         |
| 7.3       | Elliptical methods . . . . .                     | 99         |
| 7.4       | Other methods . . . . .                          | 106        |
| 7.5       | Some remarks . . . . .                           | 108        |
| <b>8</b>  | <b>Grid superposition-deformation</b>            | <b>111</b> |
| 8.1       | Introduction . . . . .                           | 111        |
| 8.2       | Generation using a regular grid . . . . .        | 112        |
| 8.3       | Quadtree and octree . . . . .                    | 114        |
| 8.4       | Generation based on a quadtree . . . . .         | 115        |
| 8.5       | Generation based on an octree . . . . .          | 119        |
| <b>9</b>  | <b>Multiblock methods</b>                        | <b>123</b> |
| 9.1       | Introduction . . . . .                           | 123        |
| 9.2       | Multiblock methods in 2 dimensions . . . . .     | 124        |
| 9.3       | Multiblock methods in 3 dimensions . . . . .     | 127        |
| <b>10</b> | <b>Advancing front methods</b>                   | <b>137</b> |
| 10.1      | Introduction . . . . .                           | 137        |
| 10.2      | Advancing front method in 2 dimensions . . . . . | 138        |
| 10.3      | Advancing front method in 3 dimensions . . . . . | 147        |
| 10.4      | Extensions . . . . .                             | 154        |
| <b>11</b> | <b>Voronoi methods and extensions</b>            | <b>159</b> |
| 11.1      | Introduction . . . . .                           | 159        |
| 11.2      | Outline of the Delaunay-Voronoi method . . . . . | 160        |
| 11.3      | Mesh generation application . . . . .            | 164        |
| 11.4      | The two-dimensional case . . . . .               | 166        |

|           |                                                            |            |
|-----------|------------------------------------------------------------|------------|
| 11.5      | The three-dimensional case . . . . .                       | 173        |
| 11.6      | Extensions . . . . .                                       | 182        |
| <b>12</b> | <b>Creation of surface meshes</b>                          | <b>187</b> |
| 12.1      | Introduction . . . . .                                     | 187        |
