

Contents

1. Introduction	1
1.1 The Global Optimization Problem	1
1.1.1 Example Problem	2
1.1.2 Solvability of the Global Optimization Problem	4
1.1.3 Formulation of the Global Optimization Problem	6
1.1.4 Classification of Problems	10
1.1.5 Test Problems	12
1.1.6 Practical Problems	12
1.2 Global Optimization Methods	13
1.2.1 General Characteristics of Methods	13
1.2.2 Classification of Methods	16
1.2.3 Stopping Conditions	21
1.2.4 Evaluation of Methods	22
1.3 Discussion	24
2. Covering Methods	25
2.1 Basic Covering Methods	26
2.1.1 The One-dimensional Case	26
2.1.2 The Multidimensional Case	30
2.2 Convergence and Optimality	35
2.2.1 Convergence of Branch-and-Bound Type Methods	35
2.2.2 Optimal Algorithms	38
2.3 Algorithms Based on Interval Methods	46
2.3.1 Basic Arithmetic Interval Operations	46
2.3.2 Interval Methods for Global Optimization	47
2.4 Algorithms Based on Integral Representation	49
2.5 Conclusions	51

3. Methods of Generalized Descent	53
3.1 Trajectory Methods	53
3.1.1 Alternation of Descents and Ascents	54
3.1.2 Golf Methods	55
3.1.3 The Branin Method	57
3.1.4 Conclusions	58
3.2 Penalty Methods	59
3.2.1 Minimization of Algebraic Functions	59
3.2.2 The Tunneling Method	61
3.2.3 The Filled Function Method	62
3.2.4 Conclusions	63
4. Random Search Methods	65
4.1 Algorithms	66
4.1.1 Random Line Search	66
4.1.2 Adaptive Random Search	67
4.1.3 Partition of A Into Subsets	70
4.1.4 Other Ideas	73
4.1.5 Generalizations	75
4.1.6 Applications	77
4.2 Convergence	78
4.2.1 Convergence Criteria	78
4.2.2 Convergence of Some Conceptual Algorithms	79
4.2.3 Efficiency	82
4.3 Stopping Conditions	85
4.3.1 Passive Stopping Rules	85
4.3.2 Sequential Stopping Rules	87
4.4 Conclusions	94
5. Clustering Methods	95
5.1 Cluster Analysis Techniques	96
5.1.1 Hierarchical Clustering	97
5.1.2 Partitional Clustering	98
5.2 Description of Clustering Algorithms	98
5.2.1 The Algorithm of Becker and Lago	99
5.2.2 Törn's Algorithm	100
5.2.3 Spircu's Algorithm	103
5.2.4 Gomulka's Realization of Törn's Algorithm	104
5.2.5 Price's Algorithm	104

5.2.6 The Algorithm of Boender, Rinnooy Kan, Timmer and Strougie	105
5.2.7 The Algorithm of Betrò and Rotondi	107
5.2.8 Timmer's Algorithm	108
5.2.9 Csendes' Realization of the Algorithm of Boender <i>et al</i>	110
5.2.10 Rotondi's Algorithm	110
5.3 Discussion of Clustering Methods	112
5.3.1 General Algorithm	112
5.3.2 Some Comments on the Algorithms	115
5.4 Conclusions	116
6. Methods Based on Statistical Models of Objective Functions	117
6.1 Heuristic Justification	118
6.2 Algorithms	121
6.2.1 Algorithms Based on the Wiener Process	122
6.2.2 A Statistical-informational Method	125
6.2.3 A Stochastic Interpolation Method	128
6.2.4 Bayesian Algorithms	130
6.2.5 A Multidimensional Axiomatically Based Algorithm	134
6.2.6 Other Algorithms	136
6.3 Axiomatics of the Statistical Approach	136
6.3.1 Representing Multimodal Objective Functions by a Family of Random Variables	138
6.3.2 Results of a Psychological Experiment	141
6.3.3 Model Parameters	144
6.3.4 Axiomatic Characterization of an Algorithm	147
6.3.5 Properties of the Algorithm	149
6.4 Conclusions	151
7. Miscellaneous	153
7.1 Parallel Global Optimization	153
7.1.1 Parallel Computers	154
7.1.2 Parallel Algorithms	156
7.1.3 Applications	158
7.1.4 Conclusions	162
7.2 Heuristic Methods	163
7.2.1 Why Heuristics are Necessary	163
7.2.2 Heuristic Elements in Global Optimization Algorithms	164
7.2.3 Simulation of Human Behaviour	165
7.2.4 Conclusions	165

7.3 Dimensionality Reduction	166
7.3.1 Mapping into R^1	166
7.3.2 Mappings Aiming at Preserving Structure	167
7.3.3 Visualization of n -dimensional Vectors	168
7.3.4 Conclusions	171
7.4 Generalizations	171
7.4.1 Constrained Problems	171
7.4.2 Multiple Criteria Optimization	172
7.4.3 Problems with Noise	173
7.4.4 Discussion	174
8. Testing and Applications	175
8.1 One-dimensional Algorithms	176
8.1.1 Algorithms	176
8.1.2 Test Problems	177
8.1.3 Stopping Conditions	180
8.1.4 Results	180
8.1.5 Discussion	181
8.2 Multidimensional Algorithms	183
8.2.1 Some Popular Test Functions	183
8.2.2 Test Results in Optimizing the Functions BR, GP, Sm, and Hn	186
8.2.3 Test Results in Optimizing the Rastrigin Function	190
8.2.4 Test Results in Optimizing the Strongin Function .	193
8.2.5 Test Results in Optimizing the Griewank Functions	194
8.2.6 Test Results in Optimizing the Design of a Magnetic Deflection System (MDS)	195
8.2.7 Test Results in Optimizing the Design of Colours	198
8.2.8 Conclusions on Testing	201
8.3 Application to Practical Problems	202
8.3.1 Optimization of a Magnetic Deflection System .	202
8.3.2 Optimization of Colour Composition	204
8.3.3 Application to Identification	212
8.3.4 Optimal Design	213
8.4 Conclusions	216
References and Bibliography	217
