|                                                         |     |
|---------------------------------------------------------|-----|
| Foreword . . . . .                                      | VII |
| Preface . . . . .                                       | IX  |
| CHAPTER 1. MATHEMATICAL MODELS IN GEOLOGY               |     |
| 1.1 Introduction . . . . .                              | 1   |
| 1.2 Scientific methods in geology . . . . .             | 5   |
| 1.3 Use of geomathematics . . . . .                     | 12  |
| 1.4 Mathematical techniques in use . . . . .            | 17  |
| 1.5 Use of empirical functions . . . . .                | 20  |
| CHAPTER 2. REVIEW OF CALCULUS                           |     |
| 2.1 Introduction . . . . .                              | 25  |
| 2.2 Classical geometry . . . . .                        | 25  |
| 2.3 Variables and functions . . . . .                   | 28  |
| 2.4 Transformations . . . . .                           | 32  |
| 2.5 Other concepts of plane analytic geometry . . . . . | 35  |
| 2.6 Differential calculus . . . . .                     | 37  |
| 2.7 Infinite series . . . . .                           | 40  |
| 2.8 Propagation of error . . . . .                      | 42  |
| 2.9 Application of Taylor series . . . . .              | 46  |
| 2.10 Integral calculus . . . . .                        | 47  |
| 2.11 Differential equations . . . . .                   | 54  |
| 2.12 Complex numbers . . . . .                          | 61  |
| CHAPTER 3. ELEMENTARY MATRICES                          |     |
| 3.1 Introduction . . . . .                              | 65  |
| 3.2 Basic definitions . . . . .                         | 66  |
| 3.3 Determinants . . . . .                              | 70  |
| 3.4 The inverse matrix . . . . .                        | 73  |
| 3.5 Linear equations . . . . .                          | 75  |
| 3.6 Method of pivotal condensation . . . . .            | 77  |

|      |                                                        |    |
|------|--------------------------------------------------------|----|
| 3.7  | Homogeneous equations; singularity . . . . .           | 79 |
| 3.8  | Partitioned matrices . . . . .                         | 81 |
| 3.9  | Canonical form, eigenvalues and eigenvectors . . . . . | 82 |
| 3.10 | Powers of a matrix . . . . .                           | 88 |
| 3.11 | Spectral components of a matrix . . . . .              | 89 |
| 3.12 | Miscellaneous concepts . . . . .                       | 92 |

## CHAPTER 4. GEOMETRY

|     |                                                              |     |
|-----|--------------------------------------------------------------|-----|
| 4.1 | Introduction . . . . .                                       | 97  |
| 4.2 | Geometrical interpretation of vectors and matrices . . . . . | 97  |
| 4.3 | Lines and planes in three-dimensional space . . . . .        | 101 |
| 4.4 | Quadric surfaces . . . . .                                   | 108 |
| 4.5 | Centers and axes of quadrics . . . . .                       | 110 |
| 4.6 | Method of least squares . . . . .                            | 115 |
| 4.7 | Major axis . . . . .                                         | 119 |

## CHAPTER 5. FACTOR ANALYSIS

|     |                                                                        |     |
|-----|------------------------------------------------------------------------|-----|
| 5.1 | Introduction . . . . .                                                 | 125 |
| 5.2 | Practical example: Mount Albert Peridotite intrusion . . . . .         | 128 |
| 5.3 | Some thermodynamical considerations . . . . .                          | 132 |
| 5.4 | Statistical relationship between the mineralogical variables . . . . . | 135 |
| 5.5 | Factor analysis . . . . .                                              | 139 |
| 5.6 | Application of factor analysis . . . . .                               | 143 |

## CHAPTER 6. PROBABILITY AND STATISTICS

|      |                                                                                   |     |
|------|-----------------------------------------------------------------------------------|-----|
| 6.1  | Introduction . . . . .                                                            | 149 |
| 6.2  | Set theory . . . . .                                                              | 151 |
| 6.3  | Calculus of probabilities . . . . .                                               | 154 |
| 6.4  | The binomial distribution . . . . .                                               | 157 |
| 6.5  | Discrete and continuous frequency distributions . . . . .                         | 159 |
| 6.6  | The normal distribution . . . . .                                                 | 161 |
| 6.7  | Significance test and confidence interval. . . . .                                | 163 |
| 6.8  | Method of moments . . . . .                                                       | 164 |
| 6.9  | Properties of expectation and variance . . . . .                                  | 168 |
| 6.10 | Continuous frequency distributions derived from the normal distribution . . . . . | 173 |

|      |                                                                              |     |
|------|------------------------------------------------------------------------------|-----|
| 6.11 | Age determinations for structural provinces in the Canadian shield . . . . . | 177 |
| 6.12 | A simple mathematical model to estimate time span . . . . .                  | 182 |
| 6.13 | Statistical inference of age determinations . . . . .                        | 185 |

## CHAPTER 7. FREQUENCY DISTRIBUTIONS AND FUNCTIONS OF INDEPENDENT RANDOM VARIABLES

|      |                                                              |     |
|------|--------------------------------------------------------------|-----|
| 7.1  | Introduction . . . . .                                       | 193 |
| 7.2  | Functions of random variables . . . . .                      | 193 |
| 7.3  | Normal probability paper . . . . .                           | 198 |
| 7.4  | Other methods of frequency-distribution analysis . . . . .   | 203 |
| 7.5  | A computer simulation experiment . . . . .                   | 214 |
| 7.6  | Probability generating functions . . . . .                   | 219 |
| 7.7  | Examples of discrete random variables . . . . .              | 222 |
| 7.8  | Compound random variables . . . . .                          | 225 |
| 7.9  | A problem of exploration strategy . . . . .                  | 227 |
| 7.10 | Desirable properties of estimators . . . . .                 | 232 |
| 7.11 | Maximum likelihood and other methods of estimation . . . . . | 234 |

## CHAPTER 8. STATISTICAL DEPENDENCE; MULTIPLE REGRESSION

|      |                                                                           |     |
|------|---------------------------------------------------------------------------|-----|
| 8.1  | Introduction . . . . .                                                    | 241 |
| 8.2  | Statistical dependence . . . . .                                          | 242 |
| 8.3  | Covariance, correlation coefficient and conditional probability . . . . . | 243 |
| 8.4  | The bivariate normal distribution . . . . .                               | 246 |
| 8.5  | Bivariate regression analysis . . . . .                                   | 253 |
| 8.6  | Multiple regression . . . . .                                             | 258 |
| 8.7  | Geometric interpretation of least squares . . . . .                       | 263 |
| 8.8  | Regression analysis and component analysis . . . . .                      | 269 |
| 8.9  | Methods of sequential regression analysis . . . . .                       | 272 |
| 8.10 | Dummy variables . . . . .                                                 | 273 |

## CHAPTER 9. TREND ANALYSIS

|     |                                                                  |     |
|-----|------------------------------------------------------------------|-----|
| 9.1 | Introduction . . . . .                                           | 277 |
| 9.2 | Empirical trend functions . . . . .                              | 278 |
| 9.3 | Applied trend analysis . . . . .                                 | 281 |
| 9.4 | Mineralogical variations in the Mount Albert intrusion . . . . . | 284 |
| 9.5 | Specific gravity in Mount Albert intrusion . . . . .             | 291 |

|      |                                                                           |     |
|------|---------------------------------------------------------------------------|-----|
| 9.6  | Analysis of covariance . . . . .                                          | 293 |
| 9.7  | Spatial variation of copper in the Whalesback Deposit, Newfoundland . . . | 294 |
| 9.8  | Trend surface analysis, 425-ft level . . . . .                            | 295 |
| 9.9  | Three-dimensional trend analysis . . . . .                                | 303 |
| 9.10 | Three-dimensional analysis of surface-hole data . . . . .                 | 305 |

## CHAPTER 10. STATIONARY RANDOM VARIABLES AND KRIGING

|       |                                                                            |     |
|-------|----------------------------------------------------------------------------|-----|
| 10.1  | Introduction . . . . .                                                     | 311 |
| 10.2  | Space series . . . . .                                                     | 314 |
| 10.3  | The model of De Wijs . . . . .                                             | 322 |
| 10.4  | Correlograms and variograms . . . . .                                      | 324 |
| 10.5  | Main properties of the autocorrelation function . . . . .                  | 327 |
| 10.6  | Theoretical autocorrelation functions . . . . .                            | 330 |
| 10.7  | Transformations of stationary series . . . . .                             | 339 |
| 10.8  | Two-dimensional autocorrelation functions . . . . .                        | 340 |
| 10.9  | Theoretical spatial autocorrelation functions . . . . .                    | 341 |
| 10.10 | Variance of average concentrations for volumes of rock . . . . .           | 345 |
| 10.11 | Matheron's geostatistical theory . . . . .                                 | 347 |
| 10.12 | Kriging . . . . .                                                          | 352 |
| 10.13 | Least-squares model with deterministic and stochastic components . . . . . | 356 |

## CHAPTER 11. HARMONIC ANALYSIS AND POWER SPECTRA

|      |                                                                              |     |
|------|------------------------------------------------------------------------------|-----|
| 11.1 | Introduction . . . . .                                                       | 363 |
| 11.2 | One-dimensional Fourier series . . . . .                                     | 364 |
| 11.3 | Spectral analysis . . . . .                                                  | 367 |
| 11.4 | Stochastic model for varve deposition in glacial Lake Barlow—Ojibway . . . . | 369 |
| 11.5 | Spectral analysis of minerals in thin section . . . . .                      | 377 |
| 11.6 | Two-dimensional harmonic analysis . . . . .                                  | 384 |
| 11.7 | Harmonic analysis of copper and gold occurrences in east-central Ontario . . | 391 |
| 11.8 | Filtering . . . . .                                                          | 400 |

## CHAPTER 12. POWERS OF MATRICES AND MARKOV CHAINS

|      |                                               |     |
|------|-----------------------------------------------|-----|
| 12.1 | Introduction . . . . .                        | 405 |
| 12.2 | Sylvester's theorem . . . . .                 | 406 |
| 12.3 | Applications of Sylvester's theorem . . . . . | 408 |

|      |                                                             |     |
|------|-------------------------------------------------------------|-----|
| 12.4 | An iterative method for extracting eigenvectors . . . . .   | 412 |
| 12.5 | Iterative procedures, review of powering methods . . . . .  | 415 |
| 12.6 | Computer algorithms for extracting eigenvalues . . . . .    | 417 |
| 12.7 | Markov chains; explicit form of transition matrix . . . . . | 419 |
| 12.8 | Embedded Markov chains . . . . .                            | 425 |
| 12.9 | Upper Pennsylvanian cyclothem in Kansas . . . . .           | 428 |

### CHAPTER 13. MULTIVARIATE STOCHASTIC PROCESS-MODELS WITH APPLICATIONS TO THE PETROLOGY OF BASALTS

|       |                                                                                                    |     |
|-------|----------------------------------------------------------------------------------------------------|-----|
| 13.1  | Introduction . . . . .                                                                             | 433 |
| 13.2  | Petrological models . . . . .                                                                      | 434 |
| 13.3  | Projection of a $p$ -dimensional situation onto the Harker diagram . . . . .                       | 438 |
| 13.4  | The Yellowknife volcanic belt . . . . .                                                            | 440 |
| 13.5  | Calculation of trend lines in the triangular diagram . . . . .                                     | 442 |
| 13.6  | Best-fitting trends in a nine-component system . . . . .                                           | 447 |
| 13.7  | Other petrological models of basalt magma; comparison of principal components to indices . . . . . | 450 |
| 13.8  | The Kolmogorov differential equations . . . . .                                                    | 454 |
| 13.9  | The transition matrix of multivariate series . . . . .                                             | 458 |
| 13.10 | Properties of the first spectral component . . . . .                                               | 466 |
| 13.11 | Extrapolation by Kolmogorov differential equations . . . . .                                       | 471 |

### CHAPTER 14. CALCULATION OF PREFERRED ORIENTATIONS FROM VECTORIAL DATA

|       |                                                                           |     |
|-------|---------------------------------------------------------------------------|-----|
| 14.1  | Introduction . . . . .                                                    | 475 |
| 14.2  | Methods of treating angular data . . . . .                                | 475 |
| 14.3  | Methods of calculating the mean for vectorial data in the plane . . . . . | 477 |

| 14.10 | The Pusteria tectonites . . . . .                                         | 504 |

CHAPTER 15. SPATIAL VARIABILITY OF MULTIVARIATE SYSTEMS

15.1 Introduction . . . . . 509

15.2 Problems related to complexity of the geological framework . . . . . 510

15.3 Methods of multivariate analysis . . . . . 513

15.4 Discriminant analysis . . . . . 519

15.5 Calculation of a probability index . . . . . 522

15.6 Generalization to multivariate situations . . . . . 526

15.7 Large copper deposits in the Abitibi area . . . . . 533

15.8 Two-stage least-squares models . . . . . 544
