

Contents

Preface	v
Chapter 1 Introduction	1
1.1 Freedom and Constraints	1
1.2 Earth and Humanity	5
1.3 China's Population	11
1.4 Mankind and the Ecological System	15
1.5 The Transition from Necessity to Freedom in Human Development	20
1.6 Tasks of Population Cybernetics	23
1.7 Methodology	30
References	34
Chapter 2 Mathematical Models of Population Systems	36
2.1 Continuous Population Equations	38
2.2 Discrete Population Equations	45
2.3 Stochastic Population Equations	49
2.4 Large-Scale Population Systems	60
2.5 Mortality Rates	64
2.6 Average Female Fertility Rates and Fertility Mode	67
2.7 Female Proportion Function	74
2.8 Solutions of Continuous Population Equations	78
References	81
Chapter 3 Demographic Indices	83
3.1 Static Population Indices	84
3.2 Average Lifetime and Life Expectancy	90
3.3 Net Population Reproduction Rate	101
3.4 Female Generation Interval	106
3.5 Population Ageing Indices	108
3.6 Labour Force Index and Dependency Index	109
3.7 Calculation of the Average Female Fertility Rate	111
References	114

Chapter 4 Dynamic Analysis of a Population System . . . 116

4.1 The Transfer Function and the Time Constant of the Population System	116
4.2 The Observability of the Population System	126
4.3 Patterns and Transition of the Population State	130
4.4 The Spectral Characteristics of the Population Operator and the Asymptotic Property of Its Semigroups	139
4.5 The Asymptotic Property of the Solution in the Discrete Population Model	150
References	159

Chapter 5 Stability Theory of Population Systems 161

5.1 Stability Concept of Population Systems	161
5.2 Critical Female Fertility Rate	164
5.3 Stability of Continuous Population System	170
5.4 Stability of Discrete Population System	177
5.5 Female Fertility Rate in China	180
5.6 Man's Historical Mission Today	185
5.7 Stability of Unsteady Population Systems	189
References	193

Chapter 6 Population Projections and Policies 195

6.1 The Significance and Methodologies of Projections . .	195
6.2 Extrapolation of the Basic Population Parameters . .	198
6.3 Methods of Calculation	205
6.4 Accuracy of Projection	209
6.5 Short Term and Long Term Population Projection for China	212
References	225

Chapter 7 Population Structure in an Ideal Society 227

7.1 Population in an Ideal Society	227
7.2 Zero Growth Rate	229
7.3 Fine Structure for Population at Zero Growth Rate .	231
7.4 Evolution of the Concept of Appropriate Population .	235
7.5 China's Appropriate Population	240
References	249

Chapter 8 Optimal Control of Population Processes 250

8.1 Introduction	250
8.2 Controllability of a Population System	252
8.3 Performance Indices and Constraints of Optimization .	256
8.4 Optimal Control of Continuous Equations of a Population Process	259

8.5 Optimal Control with Constraints	261
8.6 Computation of the Optimal Mean Fertility Rate	265
8.7 The Optimization Method of Age-Time Triangle	269
8.8 Results of Computation and Population Control	273
8.9 The Minima Principle for Population Control	277
References	282
Author and Subject Index	283
