Contents

PREF	PREFACE	
Аск	CKNOWLEDGMENTS	
Cha	pter 1. Fundamentals of the Mathematical Theory of Osc	illators
1.1	Introduction	1
1.2	Phase Plane Techniques	2
1.3	An Example of Application of Phase Plane Techniques	9
1.4		13
1.5	Asymptotic Techniques	16
1.6	Describing Function	19
1.7		25
Cha	apter 2. Examples of Biological Rhythms	
2.1	Introduction	29
2.2	Circadian Rhythms	30
2.3	Circadian Rhythms in an Insect Population	34
2.4	Circadian Rhythms in Cell Populations	36
2.5	Biochemical Oscillators	38
2.6	Neural Oscillators	41
2.7		46
	apter 3. Phase Shifts and Phase Response Curves	
3.1	Introduction	49
3.2	Timing Sequences, Isochrones, Phase Response Curves, and Phase	
5.4	Transition Curves	51
3.3	Experimental Phase Response Curves	57
3.4	•	61
3.5		63
3.6	Phase Response Curves of a Biochemical Oscillator	66
3.7	and the second s	69

VIII CONTENTS

	apter 4. Entrainment of Oscillators by External Inputs	
4.1	Introduction	71
4.1	Entrainment of a van der Pol Oscillator	71
4.2	Entrainment of a van der Poi Oscinator Entrainment of Circadian Clocks by Light and Temperature Cycles	73
4.4	Fringe Entrainment	80 84
4.5	Entrainment of Oscillators by Pulses	86
4.6	Entrainment of a Circadian Rhythm by Light Pulses	90
4.7	Subharmonic Entrainment	94
4.8	Bibliographical Notes	98
	Sissing Property Control of the Cont	70
Cha	apter 5. The Dynamics of Circadian Oscillators	
5.1	Introduction	00
5.2	Dependence of the Period of an Oscillator on Constant Environmental	99
5.2	Factors	100
5.3	Mathematical Formulation of a Model for Biological Oscillators	100
5.4	The Independence between the Phase Response Curve and the Effects of	102
J. 1	Light on the Free-Run Period	107
5.5	Computer Simulation of Models for the Circadian Clock	111
5.6	Starting and Stopping the Clock	118
5.7	Bibliographical Notes	122
	The state of the s	122
