PART I. BACKGROUND

1. Accomplishments in Cancer Epidemiology 3

Brian MacMahon

The Cigarette Epidemic 4

Ionizing Radiation (IR) 5

Skin Cancer 5

Leukemia 5

Cancer of the Breast 5

Cancer of the Lung 6

Cancer of the Thyroid 6

Thorotrast 6

Other Cancers 7

Cancer in Occupational Settings 7

Acrylonitrile (AN) 7

Arsenic 7

Asbestos 8

Benzene 8

Chemical Dyes 9

Chromium 9

Formaldehyde 10

Nickel 10

Polychlorinated Biphenyls (PCBs) 10

Vinyl Chloride (VC) 11

Other Occupational Settings 11

The Physical Environment	11
<i>Ultraviolet Radiation (UVR)</i>	11
<i>Arsenic</i>	12
<i>Asbestos</i>	12
<i>Benzene</i>	13
<i>Chromium</i>	13
<i>Cigarette Smoke</i>	14
The Microbiologic Environment	14
<i>Hepatitis Viruses</i>	14
<i>Human Papilloma Viruses (HPV)</i>	15
<i>Helicobacter Pylori</i>	16
<i>Immunodeficiency</i>	17
Reproduction	17
Alcohol	18
Iatrogenic Exposure	19
<i>Diethylstilbestrol (DES)</i>	19
<i>Oral Contraceptives (OC)</i>	20
<i>Exogenous Estrogens/progestins</i>	20
<i>Analgesic Medications</i>	21
Diet	21
Conclusion	23
References	24
2. Measures and Estimates of Cancer Burden	34
<i>Pagona Lagiou, Johanna Adami, and Dimitrios Trichopoulos</i>	
Measures of Disease Burden	34
<i>Incidence</i>	34
<i>Age-standardization</i>	36
<i>Cumulative Incidence</i>	37
<i>Prevalence</i>	37
<i>Survival</i>	42
<i>Mortality</i>	43
<i>Years of Life Lost</i>	44
<i>Disability-adjusted Life Years</i>	44
Cancer in the World	44
<i>Cancer and Other Causes of Death</i>	44
<i>Cancer Burden by Site</i>	45
<i>Cancer Burden by Cause</i>	47
<i>Trends in Mortality in the US</i>	48
<i>Geographic Variability by Site</i>	49
<i>Overall Cancer Survival</i>	57
Conclusion	59
References	59
3. The Origin of Cancer	61
<i>Jeffrey Ecsedy and David Hunter</i>	
Defining Cancer	62
<i>Cancer Progression</i>	62

<i>Metastasis</i>	63
<i>Cellular Origin of Cancer</i>	64
<i>Clinical Behavior of Cancer</i>	66
A Molecular Approach to Understanding Cancer	66
<i>Cancer Genes</i>	66
<i>Genetic Carcinogenesis</i>	67
<i>Exogenous Mutagenesis</i>	68
<i>Epigenetic Mechanisms of Gene Silencing</i>	68
<i>The Cell Cycle and Checkpoints</i>	69
<i>Genomic Instability Disorders</i>	70
<i>The p53 and Retinoblastoma Pathways</i>	71
<i>Growth-regulatory Signaling Pathways</i>	72
<i>Programmed Cell Death (Apoptosis)</i>	74
<i>Unlimited Replicative Potential of Cancer</i>	76
Extrinsic Factors Influence Cancer Progression	78
<i>The Extracellular Matrix</i>	78
<i>Angiogenesis</i>	79
<i>Evasion of Immune-mediated Eradication</i>	80
Conclusion	81
References	81
4. Genetic Epidemiology of Cancer	86
<i>Christopher Haiman and David Hunter</i>	
Cancer Genes and Mechanisms of Gene Disruption	87
<i>Genetic Variation</i>	87
<i>Mutations and Polymorphisms</i>	87
Strategies of Gene Identification	88
<i>Segregation Analysis</i>	89
<i>Linkage Analysis</i>	89
<i>Positional Cloning</i>	90
<i>Examples of Linkage</i>	90
<i>Limitations of Segregation and Linkage Analysis</i>	92
