Preface	ix
---------------	----

Introduction: Supplying the population as societal and scientific challenge	1
<i>Diana Hummel</i>	

Part A: The analytical framework

*Diana Hummel, Christine Hertler, Steffen Niemann, Alexandra Lux,
Cedric Janowicz*

1 The demographic background	11
<i>Changes in the discursive scenery 11 – The growing asynchronal development of global demographic changes 13 – Demographic transitions 19 – Impacts of demographic changes on society and environment 21 – Population dynamics as subject of scientific disciplines 25 – Demography and the population-environment-nexus 28</i>	
2 The central analytical concept: Supply systems	37
<i>The basis of sustainable development 38 – The dynamics of societal relations to nature 40 – Social-ecological systems 43 – Conceptual model of supply systems 47 – Social-ecological problem complexes within supply systems 51 – Peculiarities of, and linkages between, water and food supply systems 55 – Social-ecological transformations 57</i>	
3 Research object: Interactions between demographic processes and transformations of supply systems	59
<i>Demographic factors relevant to supply systems 59 – Modeling related problems 62 – Problems related to the dynamics of demographic processes 63 – Regulation related problems 66 – Case studies 68</i>	

Part B: Case studies

Christine Hertler

- 1 Modeling food supply and demography in prehistoric human populations 73
A challenge: Reconstructing prehistoric populations 74 – Hominins as users in supply systems 76 – Habitats and resource dynamics 83 – Early hominins in their habitats 87 – Hominin migrations 92 – Conclusions 98

Steffen Niemann

- 2 Spatial aspects of supply: Migration, water transfer, and IWRM 99
The densely populated north of Namibia 103 – Migration and resource-distant population concentration 105 – IWRM and its specific spatial conception 113 – 'Area of alimentation' and 'area of consumption' 118 – Conclusion 124

Cedric Janowicz

- 3 The world goes urban: Food supply systems and urbanization processes in Africa 129
Global hunger and the Malthusian legacy 131 – The world goes urban: Urbanization processes in the 21st century 136 – Feeding African cities: Accra as case study 140 – Conclusions 158

Alexandra Lux

- 4 Shrinking cities and water supply 161
Facets of demographic shrinkage 162 – Effects of demographic trends on water consumption 164 – Consequences for water supply—learning from eastern Germany 171 – Impulses for future decision-making: Uncertainty and adaptability 174 – Conclusions: Designing infrastructure using the concept of supply systems 178

Diana Hummel

- 5 Population changes, water conflicts, and governance in the Middle East 181
Resource scarcity, population dynamics and conflict 183 – Population dynamics the Jordan River Basin 185 – Water supply systems in the Jordan River Basin 194 – Potentials and risks of a virtual water strategy 202 – Conclusion 209

Part C: Synthesis

*Diana Hummel, Christine Hertler, Cedric Janowicz, Alexandra Lux,
Steffen Niemann*

1 Synopsis of case study results	213
<i>Summary and discussion of case study results 213 – Demographic changes examined in the case studies and their relevance for supply systems 221 – Interactions among population dynamics and supply systems 226</i>	
2 Building sustainable supply systems: Requirements and prerequisites	233
<i>Social-ecological transformation and regulation of supply systems 234 – Challenges for the future regulation of supply systems 236 – Adaptivity and regulation capabilities of supply systems 242</i>	
3 Conclusions and perspectives	249
References	255
