Contents	v
Abbreviations	ix
Preface	xi
1 Introduction	1
1.1 Framework for spatial analysis	2
1.2 Scientific literature and conferences	3
1.3 Software	4
1.4 Spatial data	5
1.5 Book content and structure	6
1.5.1 Datasets used	6
1.5.1.1 Bovine tuberculosis data	6
1.5.1.2 Environmental data	6
2 Spatial data	9
2.1 Introduction	9
2.2 Spatial data and GIS	9
2.2.1 Data types	9
2.2.2 Data storage and interchange	11
2.2.3 Data collection and management	12
2.2.4 Data quality	13
2.3 Spatial effects	14
2.3.1 Spatial heterogeneity and dependence	14
2.3.2 Edge effects	14
2.3.3 Representing neighbourhood relationships	15
2.3.4 Statistical significance testing with spatial data	15
2.4 Conclusion	16
3 Spatial visualization	17
3.1 Introduction	17
3.2 Point data	17
3.3 Aggregated data	17
3.4 Continuous data	23

3.5 Effective data display	23
3.5.1 Media, scale, and area	23
3.5.2 Dynamic display	24
3.5.3 Cartography	26
3.5.3.1 Distance or scale	26
3.5.3.2 Projection	26
3.5.3.3 Direction	27
3.5.3.4 Legends	27
3.5.3.5 Neatlines, and locator and inset maps	27
3.5.3.6 Symbolology	27
3.5.3.7 Dealing with statistical generalization	28
3.6 Conclusion	31
4 Spatial clustering of disease and global estimates of spatial clustering	32
4.1 Introduction	32
4.2 Disease cluster alarms and cluster investigation	32
4.3 Statistical concepts relevant to cluster analysis	33
4.3.1 Stationarity, isotropy, and first- and second-order effects	33
4.3.2 Monte Carlo simulation	33
4.3.3 Statistical power of clustering methods	34
4.4 Methods for aggregated data	34
4.4.1 Moran's I	35
4.4.2 Geary's c	37
4.4.3 Tango's excess events test (EET) and maximized excess events test (MEET)	37
4.5 Methods for point data	37
4.5.1 Cuzick and Edwards' k -nearest neighbour test	37
4.5.2 Ripley's K -function	39
4.5.3 Rogerson's cumulative sum (CUSUM) method	41
4.6 Investigating space-time clustering	41
4.6.1 The Knox test	42
4.6.2 The space-time k -function	42
4.6.3 The Ederer-Myers-Mantel (EMM) test	43
4.6.4 Mantel's test	43
4.6.5 Barton's test	43
4.6.6 Jacquez's k nearest neighbours test	44
4.7 Conclusion	44
5 Local estimates of spatial clustering	45
5.1 Introduction	45
5.2 Methods for aggregated data	46
5.2.1 Getis and Ord's local $G_i^*(d)$ statistic	46
5.2.2 Local Moran test	47
5.3 Methods for point data	49
5.3.1 Openshaw's Geographical Analysis Machine (GAM)	49
5.3.2 Turnbull's Cluster Evaluation Permutation Procedure (CEPP)	49
5.3.3 Besag and Newell's method	50

5.3.4	Kulldorff's spatial scan statistic	51
5.3.5	Non-parametric spatial scan statistics	52
5.3.6	Example of local cluster detection	53
5.4	Detecting clusters around a source (focused tests)	56
5.4.1	Stone's test	60
5.4.2	The Lawson–Waller score test	61
5.4.3	Bithell's linear risk score tests	62
5.4.4	Diggle's test	62
5.4.5	Kulldorff's focused spatial scan statistic	62
5.5	Space–time cluster detection	63
5.5.1	Kulldorff's space–time scan statistic	63
5.5.2	Example of space–time cluster detection	64
5.6	Conclusion	64
6	Spatial variation in risk	67
6.1	Introduction	67
6.2	Smoothing based on kernel functions	67
6.3	Smoothing based on Bayesian models	70
6.4	Spatial interpolation	73
6.5	Conclusion	80
7	Identifying factors associated with the spatial distribution of disease	81
7.1	Introduction	81
7.2	Principles of regression modelling	81
7.2.1	Linear regression	81
7.2.2	Poisson regression	83
7.2.3	Logistic regression	86
7.2.4	Multilevel models	87
7.3	Accounting for spatial effects	90
7.4	Area data	92
7.4.1	Frequentist approaches	93
7.4.2	Bayesian approaches	94
7.5	Point data	97
7.5.1	Frequentist approaches	97
7.5.2	Bayesian approaches	99
7.6	Continuous data	100
7.6.1	Trend surface analysis	100
7.6.2	Generalized least squares models	102
7.7	Discriminant analysis	103
7.7.1	Variable selection within discriminant analysis	106
7.8	Conclusions	107
8	Spatial risk assessment and management of disease	110
8.1	Introduction	110
8.2	Spatial data in disease risk assessment	110
8.3	Spatial analysis in disease risk assessment	111

8.4 Data-driven models of disease risk	112
8.5 Knowledge-driven models of disease risk	113
8.5.1 Static knowledge-driven models	113
8.5.2 Dynamic knowledge-driven models	117
8.6 Conclusion	118
