

Beginning Microsoft® Visual C#® 2008

Introduction	xxvii
--------------------	-------

Part I: The C# Language

Chapter 1: Introducing C#.....	3
Chapter 2: Writing a C# Program	13
Chapter 3: Variables and Expressions	31
Chapter 4: Flow Control	59
Chapter 5: More About Variables.....	93
Chapter 6: Functions	125
Chapter 7: Debugging and Error Handling	155
Chapter 8: Introduction to Object-Oriented Programming.....	185
Chapter 9: Defining Classes	209
Chapter 10: Defining Class Members	241
Chapter 11: Collections, Comparisons, and Conversions.....	277
Chapter 12: Generics.....	331
Chapter 13: Additional OOP Techniques.....	371
Chapter 14: C# 3.0 Language Enhancements	399

Part II: Windows Programming

Chapter 15: Basic Windows Programming	433
Chapter 16: Advanced Windows Forms Features.....	493
Chapter 17: Using Common Dialogs	537
Chapter 18: Deploying Windows Applications	583

Part III: Web Programming

Chapter 19: Basic Web Programming	627
Chapter 20: Advanced Web Programming.....	671

Chapter 21: Web Services 709

Chapter 22: Ajax Programming 739

Chapter 23: Deploying Web Applications 759

Part IV: Data Access

Chapter 24: File System Data 777

Chapter 25: XML 819

Chapter 26: Introduction to LINQ 849

Chapter 27: LINQ to SQL..... 895

Chapter 28: ADO.NET and LINQ over DataSet 933

Chapter 29: LINQ to XML..... 993

Part V: Additional Techniques

Chapter 30: Attributes..... 1019

Chapter 31: XML Documentation 1049

Chapter 32: Networking..... 1075

Chapter 33: Introduction to GDI+ 1107

Chapter 34: Windows Presentation Foundation..... 1143

Chapter 35: Windows Communication Foundation..... 1215

Chapter 36: Windows Workflow Foundation 1247

Index 1279

Contents

Introduction	xxvii
Part I: The C# Language	1
Chapter 1: Introducing C#	3
What Is the .NET Framework?	3
What's in the .NET Framework?	4
Writing Applications Using the .NET Framework	4
What Is C#?	8
Applications You Can Write with C#	8
C# in This Book	9
Visual Studio 2008	9
Visual Studio 2008 Express Products	10
Solutions	10
Summary	11
Chapter 2: Writing a C# Program	13
The Development Environments	14
Visual Studio 2008	14
Visual C# 2008 Express Edition	17
Console Applications	18
The Solution Explorer	22
The Properties Window	23
The Error List Window	23
Windows Forms Applications	24
Summary	29
Chapter 3: Variables and Expressions	31
Basic C# Syntax	32
Basic C# Console Application Structure	34
Variables	36
Simple Types	36
Variable Naming	41

Literal Values	43
Variable Declaration and Assignment	45
Expressions	46
Mathematical Operators	46
Assignment Operators	51
Operator Precedence	52
Namespaces	53
Summary	56
Exercises	57

Chapter 4: Flow Control **59**

Boolean Logic	59
Bitwise Operators	62
Boolean Assignment Operators	66
Operator Precedence Updated	68
The goto Statement	69
Branching	70
The Ternary Operator	70
The if Statement	71
The switch Statement	75
Looping	78
do Loops	79
while Loops	81
for Loops	83
Interrupting Loops	88
Infinite Loops	89
Summary	90
Exercises	90

Chapter 5: More About Variables **93**

Type Conversion	93
Implicit Conversions	94
Explicit Conversions	96
Explicit Conversions Using the Convert Commands	100
Complex Variable Types	103
Enumerations	103
Structs	108
Arrays	111
String Manipulation	118
Summary	123
Exercises	124

Chapter 6: Functions	125
Defining and Using Functions	126
Return Values	128
Parameters	130
Variable Scope	138
Variable Scope in Other Structures	141
Parameters and Return Values versus Global Data	143
The Main() Function	144
Struct Functions	147
Overloading Functions	148
Delegates	150
Summary	153
Exercises	154
Chapter 7: Debugging and Error Handling	155
Debugging in VS and VCE	156
Debugging in Nonbreak (Normal) Mode	157
Debugging in Break Mode	166
Error Handling	176
try . . . catch . . . finally	177
Listing and Configuring Exceptions	182
Notes on Exception Handling	183
Summary	184
Exercises	184
Chapter 8: Introduction to Object-Oriented Programming	185
What Is Object-Oriented Programming?	186
What Is an Object?	187
Everything's an Object	190
The Life Cycle of an Object	190
Static and Instance Class Members	191
OOP Techniques	192
Interfaces	193
Inheritance	195
Polymorphism	197
Relationships between Objects	199
Operator Overloading	201
Events	202
Reference versus Value Types	202

OOP in Windows Applications	203
Summary	206
Exercises	206
Chapter 9: Defining Classes	209
Class Definitions in C#	209
Interface Definitions	213
System.Object	216
Constructors and Destructors	218
Constructor Execution Sequence	219
OOP Tools in VS and VCE	223
The Class View Window	223
The Object Browser	225
Adding Classes	226
Class Diagrams	227
Class Library Projects	229
Interfaces Versus Abstract Classes	233
Struct Types	235
Shallow Copying versus Deep Copying	238
Summary	238
Exercises	239
Chapter 10: Defining Class Members	241
Member Definitions	241
Defining Fields	242
Defining Methods	242
Defining Properties	244
Adding Members from a Class Diagram	249
Refactoring Members	252
Automatic Properties	253
Additional Class Member Topics	254
Hiding Base Class Methods	254
Calling Overridden or Hidden Base Class Methods	256
Nested Type Definitions	257
Interface Implementation	257
Implementing Interfaces in Classes	259
Partial Class Definitions	262
Partial Method Definitions	264

Example Application	265
Planning the Application	266
Writing the Class Library	267
A Client Application for the Class Library	274
Summary	276
Exercises	276
 Chapter 11: Collections, Comparisons, and Conversions	 277
Collections	277
Using Collections	278
Defining Collections	285
Indexers	286
Adding a Cards Collection to CardLib	289
Keyed Collections and IDictionary	292
Iterators	294
Deep Copying	299
Adding Deep Copying to CardLib	302
Comparisons	303
Type Comparison	304
Value Comparison	309
Conversions	326
Overloading Conversion Operators	326
The as Operator	327
Summary	328
Exercises	329
 Chapter 12: Generics	 331
What Is a Generic?	331
Using Generics	333
Nullable Types	333
The System.Collections.Generic Namespace	341
Defining Generics	351
Defining Generic Classes	352
Defining Generic Interfaces	365
Defining Generic Methods	365
Defining Generic Delegates	367
Summary	368
Exercises	368

Chapter 13: Additional OOP Techniques	371
The :: Operator and the Global Namespace Qualifier	371
Custom Exceptions	373
Exception Base Classes	373
Adding Custom Exceptions to CardLib	374
Events	375
What Is an Event?	375
Handling Events	377
Defining Events	379
Expanding and Using CardLib	389
A Card Game Client for CardLib	389
Summary	397
Exercises	398
Chapter 14: C# 3.0 Language Enhancements	399
Initializers	400
Object Initializers	400
Collection Initializers	402
Type Inference	406
Anonymous Types	408
Extension Methods	412
Lambda Expressions	418
Anonymous Methods Recap	418
Lambda Expressions for Anonymous Methods	419
Lambda Expression Parameters	423
Lambda Expression Statement Bodies	424
Lambda Expressions as Delegates and Expression Trees	425
Lambda Expressions and Collections	426
Summary	429
Exercises	430
Part II: Windows Programming	431
Chapter 15: Basic Windows Programming	433
Controls	434
Properties	434
Anchoring, Docking, and Snapping Controls	435
Events	437

The Button Control	440
Button Properties	440
Button Events	441
The Label and LinkLabel Controls	443
The TextBox Control	444
TextBox Properties	445
TextBox Events	446
The RadioButton and CheckBox Controls	454
RadioButton Properties	455
RadioButton Events	455
CheckBox Properties	456
CheckBox Events	456
The GroupBox Control	457
The RichTextBox Control	461
RichTextBox Properties	462
RichTextBox Events	463
The ListBox and CheckedListBox Controls	469
ListBox Properties	470
ListBox Methods	471
ListBox Events	472
The ListView Control	475
ListView Properties	475
ListView Methods	477
ListView Events	478
ListViewItem	478
ColumnHeader	478
The ImageList Control	478
The TabControl Control	486
TabControl Properties	487
Working with the TabControl	488
Summary	491
Exercises	492
 Chapter 16: Advanced Windows Forms Features	 493
Menus and Toolbars	494
Two Is One	494
Using the MenuStrip Control	494
Creating Menus Manually	495
Additional Properties of the ToolStripMenuItem	498
Adding Functionality to Menus	499

Toolbars	501
ToolStrip Properties	502
ToolStrip Items	503
StatusStrip	509
StatusStripStatusLabel Properties	509
SDI and MDI Applications	512
Building MDI Applications	514
Creating Controls	524
A LabelTextbox Control	526
Debugging User Controls	530
Extending the LabelTextbox Control	531
Summary	535
Exercises	535
Chapter 17: Using Common Dialogs	537
Common Dialogs	537
How to Use Dialogs	539
File Dialogs	540
OpenFileDialog	540
SaveFileDialog	553
Printing	559
Printing Architecture	560
Printing Multiple Pages	565
PageSetupDialog	568
PrintDialog	570
Print Preview	575
PrintPreviewDialog	575
PrintPreviewControl	576
FontDialog and ColorDialog	577
FontDialog	577
ColorDialog	579
FolderBrowserDialog	580
Summary	581
Exercises	582
Chapter 18: Deploying Windows Applications	583
Deployment Overview	583
ClickOnce Deployment	584
Updates	595
Visual Studio Setup and Deployment Project Types	597

Microsoft Windows Installer Architecture	598
Windows Installer Terms	599
Advantages of the Windows Installer	601
Creating an Installation Package for the SimpleEditor	602
Planning the Installation	602
Creating the Project	603
Project Properties	604
File System Editor	607
File Types Editor	611
Launch Condition Editor	612
User Interface Editor	613
Building the Project	617
Installation	617
Welcome	618
Read Me	618
License Agreement	619
Optional Files	619
Select Installation Folder	620
Confirm Installation	621
Progress	621
Installation Complete	622
Running the Application	622
Uninstall	622
Summary	622
Exercises	623
 Part III: Web Programming	 625
Chapter 19: Basic Web Programming	627
Overview	628
ASP.NET Runtime	628
Creating a Simple Page	629
Server Controls	636
Event Handlers	637
Input Validation	642
State Management	646
Client-Side State Management	646
Server-Side State Management	648
Authentication and Authorization	652
Authentication Configuration	652
Using Security Controls	657

Reading and Writing to a SQL Server Database	660
Summary	669
Exercises	670

Chapter 20: Advanced Web Programming	671
---	------------

Master Pages	671
Site Navigation	679
User Controls	680
Profiles	683
Profile Groups	685
Profiles with Components	686
Profiles with Custom Data Types	686
Profiles with Anonymous Users	687
Web Parts	688
Web Parts Manager	689
Web Parts Zone	689
Editor Zone	692
Catalog Zone	695
Connections	697
JavaScript	701
Script Element	701
Declaration of Variables	702
Defining Functions	702
Statements	702
Objects	703
Summary	707
Exercises	708

Chapter 21: Web Services	709
---------------------------------	------------

Before Web Services	710
Remote Procedure Call (RPC)	710
SOAP	711
Where to Use Web Services	711
A Hotel Travel Agency Application Scenario	712
A Book Distributor Application Scenario	712
Client Application Types	713
Application Architecture	713
Web Services Architecture	714
What Methods Can I Call?	714
Calling a Method	715

SOAP and Firewalls	716
WS-I Basic Profile	717
Web Services and the .NET Framework	717
Creating a Web Service	717
Client	719
Creating a Simple ASP.NET Web Service	720
Adding a Web Method	721
Testing the Web Service	722
Implementing a Windows Client	724
Calling the Service Asynchronously	728
Implementing an ASP.NET Client	731
Passing Data	732
Summary	736
Exercises	737
 Chapter 22: Ajax Programming	 739
Ajax Overview	739
Update Panel	741
Timer Control	746
Update Progress	747
Web Services	749
Extender Controls	755
Summary	757
Exercises	757
 Chapter 23: Deploying Web Applications	 759
Internet Information Services	759
IIS Configuration	760
Copying a Web Site	763
Publishing a Web Site	765
Windows Installer	767
Creating a Setup Program	767
Installing the Web Application	769
Summary	772
Exercises	773

Chapter 24: File System Data **777**

Streams	778
The Classes for Input and Output	778
The File and Directory Classes	780
The FileInfo Class	781
The DirectoryInfo Class	783
Path Names and Relative Paths	784
The FileStream Object	784
The StreamWriter Object	791
The StreamReader Object	794
Reading and Writing Compressed Files	802
Serialized Objects	805
Monitoring the File Structure	810
Summary	818
Exercises	818

Chapter 25: XML **819**

XML Documents	819
XML Elements	820
Attributes	821
The XML Declaration	821
Structure of an XML Document	822
XML Namespaces	823
Well-Formed and Valid XML	824
Validating XML Documents	824
Using XML in Your Application	828
XML Document Object Model	828
Selecting Nodes	839
Summary	847
Exercises	848

Chapter 26: Introduction to LINQ **849**

LINQ Varieties	850
First LINQ Query	850
Declaring a Variable for Results Using the var Keyword	852
Specify Data Source: from Clause	853
Specify Condition: where Clause	853

Select Items: select Clause	854
Finishing Up: Using the foreach Loop	854
Deferred Query Execution	854
Using the LINQ Method Syntax and Lambda Expressions	855
LINQ Extension Methods	855
Query Syntax versus Method Syntax	855
Lambda Expressions	856
Ordering Query Results	858
orderby Clause	860
Ordering Using Method Syntax	860
Querying a Large Data Set	862
Aggregate Operators	865
Querying Complex Objects	868
Projection: Creating New Objects in Queries	872
Projection: Method Syntax	875
Select Distinct Query	875
Any and All	877
Ordering By Multiple Levels	879
Multi-Level Ordering Method Syntax: ThenBy	881
Group Queries	881
Take and Skip	883
First and FirstOrDefault	886
Set Operators	887
Joins	891
Resources and Further Reading	892
Summary	893
Exercises	893
Chapter 27: LINQ to SQL	895
Object-Relational Mapping (ORM)	896
Installing SQL Server and the Northwind Sample Data	896
Install SQL Server Express 2005	897
Installing the Northwind Sample Database	898
First LINQ to SQL Query	898
Navigating LINQ to SQL Relationships	907
Drilling Down Further with LINQ to SQL	911
Grouping, Ordering, and Other Advanced Queries in LINQ to SQL	914
Displaying Generated SQL	917
Data Binding with LINQ to SQL	921
Updating Bound Data with LINQ to SQL	928
Summary	929
Exercises	930

Chapter 28: ADO.NET and LINQ over DataSet **933**

What Is ADO.NET?	934
Why Is It Called ADO.NET?	934
Design Goals of ADO.NET	935
Overview of ADO.NET Classes and Objects	937
Provider Objects	937
Consumer Objects	938
Using the System.Data Namespace	939
Reading Data with the DataReader	940
Reading Data with the DataSet	948
Filling the DataSet with Data	948
Accessing Tables, Rows, and Columns in the DataSet	948
Updating the Database	952
Adding Rows to the Database	956
Deleting Rows	963
Accessing Multiple Tables in a DataSet	965
Relationships in ADO.NET	965
Navigating with Relationships	966
XML and ADO.NET	973
XML Support in ADO.NET DataSets	973
SQL Support in ADO.NET	977
SQL Commands in Data Adapters	977
Direct Execution of SQL Commands	980
Calling a SQL Stored Procedure	983
Using LINQ over DataSet with ADO.NET	985
When to Use LINQ over DataSet	985
Summary	990
Exercises	990

Chapter 29: LINQ to XML **993**

LINQ to XML Functional Constructors	994
Saving and Loading an XML Document	998
Loading XML from a String	1001
Contents of a Saved XML Document	1001
Working with XML Fragments	1002
Generating XML from LINQ to SQL	1004
Displaying the Northwind Customer Orders XML Document	1008
How to Query an XML Document	1009
Using Query Members	1010

Summary	1016
Exercises	1016
 Part V: Additional Techniques	 1017
 Chapter 30: Attributes	 1019
What Is an Attribute?	1019
Reflection	1023
Built-in Attributes	1026
System.Diagnostics.ConditionalAttribute	1027
System.ObsoleteAttribute	1029
System.SerializableAttribute	1031
System.Reflection.AssemblyDelaySignAttribute	1034
Custom Attributes	1038
BugFixAttribute	1039
Summary	1046
 Chapter 31: XML Documentation	 1049
Adding XML Documentation	1050
XML Documentation Comments	1052
Adding XML Documentation Using a Class Diagram	1059
Generating XML Documentation Files	1063
Example Application with XML Documentation	1066
Making Use of XML Documentation	1068
Programmatically Processing XML Documentation	1068
Styling XML Documentation with XSLT	1070
Documentation Tools	1071
Summary	1073
Exercises	1073
 Chapter 32: Networking	 1075
Networking Overview	1075
Name Resolution	1078
Uniform Resource Identifier	1080
TCP and UDP	1081
Application Protocols	1081
Networking Programming Options	1083
WebClient	1084
WebRequest and WebResponse	1086

TcpListener and TcpClient	1096
Summary	1104
Exercises	1105
Chapter 33: Introduction to GDI+	1107
Overview of Graphical Drawing	1108
The Graphics Class	1108
Disposing of Objects	1109
Coordinate System	1110
Colors	1118
Drawing Lines Using the Pen Class	1119
Drawing Shapes Using the Brush Class	1122
Drawing Text Using the Font Class	1124
Drawing Using Images	1128
Drawing with a Texture Brush	1131
Double-Buffering	1135
Advanced Capabilities of GDI+	1138
Clipping	1138
System.Drawing.Drawing2D	1139
System.Drawing.Imaging	1140
Summary	1140
Exercises	1141
Chapter 34: Windows Presentation Foundation	1143
What Is WPF?	1144
WPF for Designers	1145
WPF for C# Developers	1148
Anatomy of a Basic WPF Application	1148
WPF Fundamentals	1160
XAML Syntax	1161
Desktop and Web Applications	1164
The Application Object	1164
Control Basics	1165
Control Layout	1174
Control Styling	1184
Triggers	1189
Animation	1191
Static and Dynamic Resources	1194

Programming with WPF	1200
WPF User Controls	1200
Implementing Dependency Properties	1201
Summary	1212
Exercises	1213
 Chapter 35: Windows Communication Foundation	 1215
What Is WCF?	1216
WCF Concepts	1217
WCF Communication Protocols	1217
Addresses, Endpoints, and Bindings	1218
Contracts	1220
Message Patterns	1220
Behaviors	1221
Hosting	1221
WCF Programming	1221
Defining WCF Service Contracts	1231
Self-Hosted WCF Services	1238
Summary	1245
Exercises	1246
 Chapter 36: Windows Workflow Foundation	 1247
Activities	1251
DelayActivity	1251
SuspendActivity	1253
WhileActivity	1254
SequenceActivity	1257
Custom Activities	1260
The Workflow Runtime	1266
Data Binding	1273
Summary	1278
 Index	 1279
