Website resources	x	Global energy transfers	30
Preface to the third edition	xiii	Local and regional energy transfers	32
Acknowledgements	xiv	<i>Applications: renewable energy from the environment</i>	33

Part one FUNDAMENTALS

1 THE PHYSICAL ENVIRONMENT:

INTRODUCTORY IDEAS AND CONCEPTS

Upper Wharfedale, North Yorkshire: an environmental system	3
Upper Wharfedale viewed as a system	8
Evolutionary and equilibrium approaches to environmental systems	10
Modern approaches in physical geography	12
The rise of Earth System Science	14
Conclusion	15

2 ENERGY AND EARTH

The planetary setting	18
<i>New developments: the sun, our nearest star</i>	19
Concepts of energy	19
<i>Key concepts: heat and temperature</i>	21
General patterns and principles of electro- magnetic radiation	22
Exogenetic energy	25
Endogenetic energy	28
Energy outputs of the globe	28
<i>Key concepts: the laws of thermodynamics</i>	30

Part two ATMOSPHERE

3 HEAT AND ENERGY IN THE ATMOSPHERE 39

The atmospheric energy system	39
<i>Human impact: ozone</i>	41
Spatial variability of radiation exchanges	44
<i>Key concepts: the greenhouse effect</i>	45
Latitudinal radiation balance	46
<i>New developments: measuring radiation from space</i>	46
Heat balance	47
Energy transfers and the global circulation	51
Effects upon temperature	51
Conclusion	54

4 MOISTURE IN THE ATMOSPHERE 56

The effects of heating and cooling in the atmosphere	56
Condensation	58
<i>Systems: cloud types</i>	62
Precipitation	65
<i>New developments: cloud seeding</i>	67
<i>Human impact: thunderstorms</i>	68
Conclusion	72

5 PRECIPITATION AND EVAPO- TRANSPIRATION

- Precipitation 73
Human impact: acid rain 75
New developments: measuring precipitation from space 81
Human impact: drought 85
Applications: floods 88
 Evapotranspiration 90
 Conclusion 98

6 THE ATMOSPHERE IN MOTION

- Atmospheric circulation and winds 100
 Forces acting upon the air 102
 The global pattern of circulation 105
 Energy transfer in the atmosphere 106
 Wind patterns 108
Applications: general circulation models 111
Human impact: jet streams 116
New developments: El Niño–Southern Oscillation 118
 Conclusion 120

7 WEATHER-FORMING SYSTEMS

- Air masses 121
 Weather-forming systems of temperate latitudes 124
Concepts: air streams 125
Human impact: storms 130
 Weather-forming systems of the tropics 134
 Weather prediction 136
 Weather prediction and hazards 138
New developments: Atlantic tropical cyclone prediction model 139
Human impact: tornadoes 140

8 MICRO AND LOCAL CLIMATES

- The climate near the ground 141
 Urban climates 149
New developments: urban heat island modelling 151
 The microclimate of slopes 153
Applications: human comfort and bioclimatology 154
Applications: vineyard microclimate 156
 Local winds 157

73

9 CLIMATE CHANGE

- Evidence for climatic change 162
Concepts: dating 165
New developments: sudden climate changes 168
 Causes of climatic change 170
 Future climates 176
Key concepts: implications of global warming 177
 Conclusion 178

161

100

121

141

Part three GEOSPHERE

10 EARTH'S GEOLOGICAL STRUCTURE AND PROCESSES

- Origin and dynamics 183
New developments: Earth-crossing objects and deep impacts 186
 Earth structure and internal energy 186
Systems: planetary material and energy systems 188
 Crustal evolution: plate tectonics 189
Key processes: sea-floor spreading 190
Human impact: seismic studies and seismo-volcanic hazards 197
 The geological evolution of Britain 204
 Conclusion 204
Applications: morphotectonic landscapes in Britain 205

183

11 THE GLOBAL OCEAN

- Evolution of Earth's ocean basins 209
Key processes: the birth of the Atlantic Ocean 211
 Ocean basin geometry and sea levels 214
 Composition and structure of ocean waters 215
Applications: Late Quaternary isostatic crustal adjustments 216
Systems: oceans and global environmental change 218
 Ocean circulation 219
 Tides and waves 220
New developments: ocean–atmosphere coupling and climate in western Europe 221
Human impact: economic activity and ocean–atmosphere interactions 225
 Conclusion 225

209

12 ROCK FORMATION AND DEFORMATION**227***Systems: the rock cycle* 228*Rock-forming minerals and processes* 228*Key processes: igneous rocks* 230*The rock cycle (1) igneous processes and land-systems* 232*Human impact: volcanic hazards* 236*The rock cycle (2) metamorphic processes and landsystems* 237*The rock cycle (3) sedimentary processes and landsystems* 238*The rock cycle (4) ocean environment* 244*Applications: geological resources* 247*Rock deformation: folding and faulting* 248*New developments: super volcanoes* 251*Conclusion* 252**13 DENUDATION, WEATHERING AND MASS WASTING****254***Denudation* 254*Systems: geomorphic systems* 255*Force and resistance* 257*Weathering* 260*New developments: denudation, climate change and feedbacks* 263*Mass wasting* 266*Applications: karst landsystems* 266*Key concepts: Mohr–Coulomb failure criteria* 269*Human impact: debris flow hazard and structural damage* 276*Conclusion* 278**14 FLOWING WATER AT THE LAND SURFACE****281***Generation of channel flow* 281*Systems: catchment and watershed models* 283*Human impact: floods and flood control* 291*Stream flow in channels* 293*Key processes: channel hydraulics* 295*Channel erosion and sediment transfer* 299*New developments: urban development on flood plains* 299*Fluvial landsystems* 302*Conclusion* 308*Applications: river terraces and environmental change* 309**15 ICE AT THE LAND SURFACE****311***Form, mass and energy balance of ice* 311*Systems: glacier mass balance* 314*Key concepts: thermodynamic character of glaciers* 317*Ice flow and glacier geomorphic processes* 319*Applications: deformation of the glacier bed* 323*Glacier erosional landsystems* 328*New developments: the stability of ice shelves* 329*Glacier depositional landsystems* 333*Permafrost processes and landsystems* 335*Human impact: glacier resources and hazards* 339*Conclusion* 340**16 THE WORK OF THE WIND****342***Aeolian processes* 342*New developments: storminess and global climatic change* 343*Key processes: deflation and entrainment* 344*Aeolian landsystems* 345*Systems: climate, tectonics and deserts* 346*Desert landsystems* 347*Applications: the environmental significance of loess sheets* 348*Conclusion* 352*Human impact: medieval storms and coastal dunes* 353**17 THE WORK OF THE SEA****355***Wave, current and tidal action* 355*Key processes: wave form and action* 357*Coastal geomorphic processes* 359*Applications: Holocene development of the British coastline* 360*Human impact: coastal management and sea-level rise* 363*Coastal landsystems* 365*The global coastline* 369*Systems: tectonics, climate and sea levels* 371*New developments: managed retreat* 375*Conclusion* 376**Part four BIOSPHERE****18 SOIL PROPERTIES****381***Physical properties* 381*Colloidal properties* 387*pH or soil reaction* 393*New developments: carbon sequestration in soils* 394

Soil fertility	396	
Conclusion	397	
19 SOIL FORMATION	398	
Soil development, soil profiles and soil horizons	398	
The soil-forming environment	400	
Leaching, decalcification, calcification	404	
Podzolization	405	
Clay formation and translocation	407	
Gleying	409	
Salinization, alkalization, solodization	411	
Laterization	413	
The soil catena: the topographical factor in soil formation	415	
<i>Human impact: soil erosion: the human degradation of soil profiles</i>	416	
Conclusion	417	
20 VEGETATION SYSTEMS	419	
Units and scale of study	419	
The concept of the ecosystem	420	
Environmental factors	420	
Limiting factors and range of tolerance	422	
The concept of the ecological niche	423	
Vegetation zones of Earth	423	
<i>Key concepts: climatic diagrams of vegetation regions</i>	424	
Conclusion	426	
21 VEGETATION DEVELOPMENT AND SUCCESSION	427	
Succession and climax	427	
Classification of successions	429	
Ecosystem changes through succession	436	
Theories of climax vegetation	437	
<i>Key concepts: colonization of the British Isles by vegetation in postglacial times</i>	439	
Conclusion	440	
22 ENERGY FLOWS AND NUTRIENT CYCLES IN ECOSYSTEMS	442	
General principles of energy flow	442	
Ecosystem production	449	
Plant nutrients	450	
<i>Human impact: human modifications of nutrient cycles</i>	458	
Conclusion	460	
23 DIVERSITY AND STABILITY IN ECOSYSTEMS	462	
Diversity	463	
<i>Systems: theory of island biogeography</i>	468	
Stability	470	
Relationship between diversity and stability	473	
Threats to global biodiversity	475	
Conclusion	477	
Part five ENVIRONMENTS		
24 POLAR ENVIRONMENTS	481	
Distribution of polar landscapes	481	
Vegetation and soils in high latitudes	483	
Energy and ecological productivity	485	
<i>New developments: polar climates, global warming and polar ice sheets</i>	489	
Construction problems	491	
Impact of oil and gas fields	493	
Arctic pollution	496	
Environmental impacts of polar tourism	498	
Conclusion	499	
25 MOUNTAIN ENVIRONMENTS	500	
Physical geology of Earth's principal mountain systems	500	
<i>Key concepts: the character of mountains</i>	501	
Mountain meteorology and climate	506	
<i>Applications: environmental problems in mountain areas</i>	507	
<i>Human impact: living at altitude</i>	514	
Mountain ecosystems	514	
Alpine landsystem	516	
<i>New developments: climate change and alpine environments</i>	517	
Conclusion	522	
26 MEDITERRANEAN ENVIRONMENTS	524	
Climate, present and past	524	
Soil formation and distribution	527	
Development and adaptation of vegetation	530	
Distribution of the plant communities	534	
Fire in the Mediterranean landscape	536	
Desertification and soil erosion	538	
Water supply problems: quantity and quality	539	
<i>Human impact: badlands</i>	540	
Conclusion	544	

27 DRYLAND ENVIRONMENTS	546	
Climate	546	
Desert	548	
Savanna	551	
<i>New developments: plant types</i>	553	
Environmental problems of dry lands	553	
<i>Human impact: atmospheric dust and its impact</i>	562	
Conclusion	563	
28 HUMID TROPICAL ENVIRONMENTS	565	
Climate	565	
Geomorphology	567	
Soils	568	
Forests	568	
<i>Human impact: deforestation in Brazil</i>	573	
<i>Human impact: Hurricane Mitch</i>	576	
Conclusion	579	
Appendix Soil classification according to the FAO–UNESCO <i>Soil Map of the World</i>		581
