

CONTENTS

Part 1 Introduction 2

1 Introducing Physical Geography 4

Introducing Geography 5

Realms of Geography 6

Tools in Geography 10

Systems in Physical Geography 10

Understanding Physical Geography 10

**Physical Geography, Environment, and
Global Change 11**

Global Climate Change 11

The Carbon Cycle 11

Biodiversity 11

Pollution 15

Extreme Events 15

*Geographers at Work • The Changing Face of the
Earth 15*

2 Spheres, Scales, Systems, and Cycles 18

*Focus on Systems 2.1 • The Value of Systems
Thinking 20*

The Four Great Earth Realms 20

Scales in Physical Geography 21

Systems in Physical Geography 21

Open and Closed Flow Systems 25

Feedback and Equilibrium in Flow Systems 27

Time Cycles 29

Part 2 Weather and Climate Systems 32

3 The Earth as a Rotating Planet 34

The Shape of the Earth 35

Earth Rotation 37

Direction of Rotation 37

Environmental Effects of Earth Rotation 37

The Geographic Grid 38

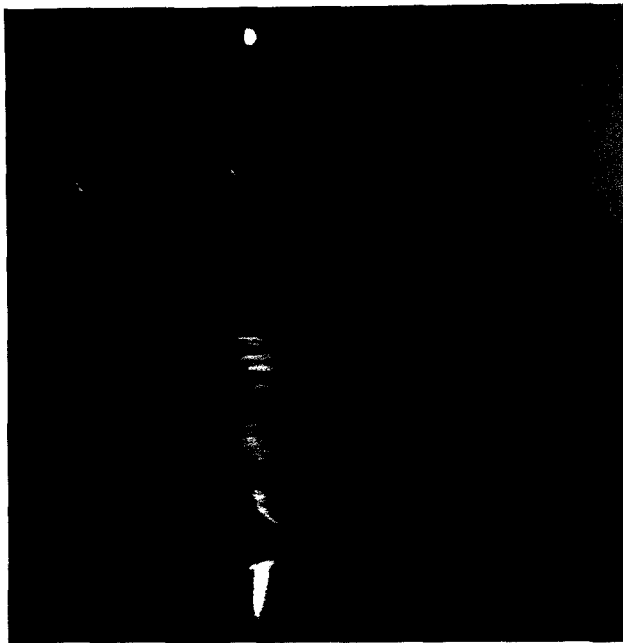

Parallels and Meridians 38

Latitude and Longitude 38

Map Projections 40

*Working It Out 3.1 • Distances from Latitude and
Longitude 40*

Focus on Remote Sensing 3.2 • The Global Positioning System 41
 Polar Projection 42
 Mercator Projection 42
 Goode Projection 42
Geographer's Tools 3.3 • Geographic Information Systems 44
Global Time 46
 Standard Time 46
 World Time Zones 47
 International Date Line 48
 Daylight Saving Time 49
 Precise Timekeeping 49
The Earth's Revolution Around the Sun 49
Working It Out 3.4 • Global Timekeeping 49
 Tilt of the Earth's Axis 50
 Solstice and Equinox 51
 Equinox Conditions 52
 Solstice Conditions 52
A Closer Look: Geographer's Tools 3.5 • Focus on Maps 56

4 The Global Energy System 62

Electromagnetic Radiation 64
Focus on Systems 4.1 • Forms of Energy 64
 Radiation and Temperature 66
 Solar Radiation 66
Working It Out 4.2 • Radiation Laws 67
 Characteristics of Solar Energy 68
 Longwave Radiation from the Earth 69
 The Global Radiation Balance 69
Insolation over the Globe 70
 Insolation and the Path of the Sun in the Sky 70
Working It Out 4.3 • Calculating the Global Radiation Balance 71

Daily Insolation through the Year 74
 Annual Insolation by Latitude 74
World Latitude Zones 75
Composition of the Atmosphere 75
 Ozone in the Upper Atmosphere 76
Sensible Heat and Latent Heat Transfer 77
The Global Energy System 77
 Solar Energy Losses in the Atmosphere 77
Eye on Global Change 4.4 • The Ozone Layer—Shield to Life 78
 Albedo 78
 Counterradiation and the Greenhouse Effect 80
Focus on Remote Sensing 4.5 • CERES—Clouds and the Earth's Radiant Energy System 80
 Global Energy Budgets of the Atmosphere and Surface 81
 Incoming Shortwave Radiation 82
 Surface Energy Flows 82
Focus on Systems 4.6 • Energy and Matter Budgets 82
 Energy Flows to and from the Atmosphere 83
 Climate and Global Change 83
Net Radiation, Latitude, and the Energy Balance 83
Eye on the Environment 4.7 • Solar Power 86
A Closer Look: Geographer's Tools 4.8 • Remote Sensing for Physical Geography 91

5 Air Temperature and Air Temperature Cycles 100

Focus on Systems 5.1 • The Surface Energy Balance Equation 102
Surface Temperature 103
Air Temperature 104
 Measurement of Air Temperature 104
The Daily Cycle of Air Temperature 104
Working It Out 5.2 • Temperature Conversion 105
 Daily Insolation and Net Radiation 105
 Daily Temperature 106
 Temperatures Close to the Ground 106
 Environmental Contrasts: Urban and Rural Temperatures 107
 The Urban Heat Island 109
Geographers at Work • How Cities Alter Weather and Climate 109
Temperature Structure of the Atmosphere 110
 Troposphere 111
 Stratosphere and Upper Layers 111
 High-Mountain Environments 112
 Temperature Inversion 113
The Annual Cycle of Air Temperature 114
 Net Radiation and Temperature 114
 Land and Water Contrasts 115
World Patterns of Air Temperature 118
 Factors Controlling Air Temperature Patterns 118
 World Air Temperature Patterns for January and July 118
 The Annual Range of Air Temperatures 121

Global Warming and the Greenhouse Effect 122*Working It Out 5.3 • Exponential Growth 123**Eye on Global Change 5.4 • Carbon Dioxide—**On the Increase 124*

Factors Influencing Climatic Warming and Cooling 124

The Temperature Record 126

Future Scenarios 127

*A Closer Look: Eye on Global Change 5.5 • The IPCC Report of 2001 132***6 Atmospheric Moisture and Precipitation 134****Three States of Water 136****The Hydrosphere and the Hydrologic Cycle 136***Working It Out 6.1 • Energy and Latent Heat 137***Humidity 138**

Specific Humidity 138

Focus on Systems 6.2 • The Global Water Balance as a Matter Flow System 139

Relative Humidity 140

The Adiabatic Process 141

Dry Adiabatic Rate 142

Wet Adiabatic Rate 142

*Working It Out 6.3 • The Lifting Condensation Level 143***Clouds 144**

Cloud Forms 144

Fog 145

*Focus on Remote Sensing 6.4 • Observing Clouds from GOES 146***Precipitation 146**

Precipitation Processes 149

Orographic Precipitation 149

Convictional Precipitation 150

Thunderstorms 152

Microbursts 155

*Geographers at Work • Bad Air Days and Other Mysteries 156***Air Quality 156***Focus on Systems 6.5 • The Thunderstorm as a Flow System 157**A Closer Look: Eye on the Environment 6.6 • Air Pollution 161***7 Winds and the Global Circulation System 168****Atmospheric Pressure 170**

Measuring Atmospheric Pressure 170

How Air Pressure Changes with Altitude 171

*Working It Out 7.1 • Pressure and Density in the Oceans and Atmosphere 172***Wind 172**

Measurement of Wind 172

Winds and Pressure Gradients 173

A Simple Convective Wind System 174

Sea and Land Breezes 175

Local Winds 175

Geographers at Work • The Power of Wind 176

The Coriolis Effect and Winds 177

Eye on the Environment 7.2 • Wind Power, Wave Power, and Current Power 178

Cyclones and Anticyclones 180

Surface Winds on an Ideal Earth 181

*Focus on Systems 7.3 • The Convection Loop as an Energy Flow System 182***Global Wind and Pressure Patterns 183**

Subtropical High-Pressure Belts 183

The ITCZ and the Monsoon Circulation 183

Wind and Pressure Features of Higher Latitudes 186

Winds Aloft 187

The Geostrophic Wind 188

Global Circulation at Upper Levels 189

Rossby Waves, Jet Streams, and the Polar Front 190

Temperature Layers of the Ocean 192**Ocean Currents 193**

Surface Currents 193

Eye on Global Change 7.4 • El Niño 196

Deep Currents and Thermohaline Circulation 198

8 Weather Systems 204**Air Masses 205**

North American Air Masses 207

Cold, Warm, and Occluded Fronts 208

Traveling Cyclones and Anticyclones 210

Wave Cyclones 210

Weather Changes Within a Wave Cyclone 212

Cyclone Tracks and Cyclone Families 213

The Tornado 214

Tropical and Equatorial Weather Systems 215

Focus on Remote Sensing 8.1 • TRMM—The Tropical Rainfall Monitoring Mission 216

Easterly Waves and Weak Equatorial Lows 218

Polar Outbreaks 218

Tropical Cyclones 218

Eye on the Environment 8.2 • Hurricane Andrew—Killer Cyclone 222

Impacts of Tropical Cyclones 223

Poleward Transport of Heat and Moisture 224

Atmospheric Heat and Moisture Transport 224

Focus on Systems 8.3 • Hadley Cell Circulation as a Convection Loop Flow System 225

Oceanic Heat Transport 226

Cloud Cover, Precipitation, and Global Warming 227

Focus on Systems 8.4 • Feedback Loops in the Global Climate System 228

9 The Global Scope of Climate 232

Keys to Climate 234

Temperature Regimes 234

Global Precipitation 234

Focus on Systems 9.1 • Time Cycles of Climate 235

Working It Out 9.2 • Averaging in Time Cycles 238

Seasonality of Precipitation 241

Climate Classification 243

Overview of the Climates 246

Dry and Moist Climates 247

A Closer Look: Special Supplement 9.3 • The Köppen Climate System 252

10 Low-Latitude Climates 256

Overview of the Low-Latitude Climates 257

The Wet Equatorial Climate ① 258

The Monsoon and Trade-Wind Coastal Climate ② 258

The Low-Latitude Rainforest Environment 261

Geographers at Work • Conserving Tropical Biodiversity Outside of National Parks 262

The Wet-Dry Tropical Climate ③ 264

The Savanna Environment 265

Working It Out 10.1 • Cycles of Rainfall in the Low Latitudes 266

Eye on Global Change 10.2 • Drought and Land Degradation in the African Sahel 270

The Dry Tropical Climate ④ 273

The Tropical Desert Environment 276

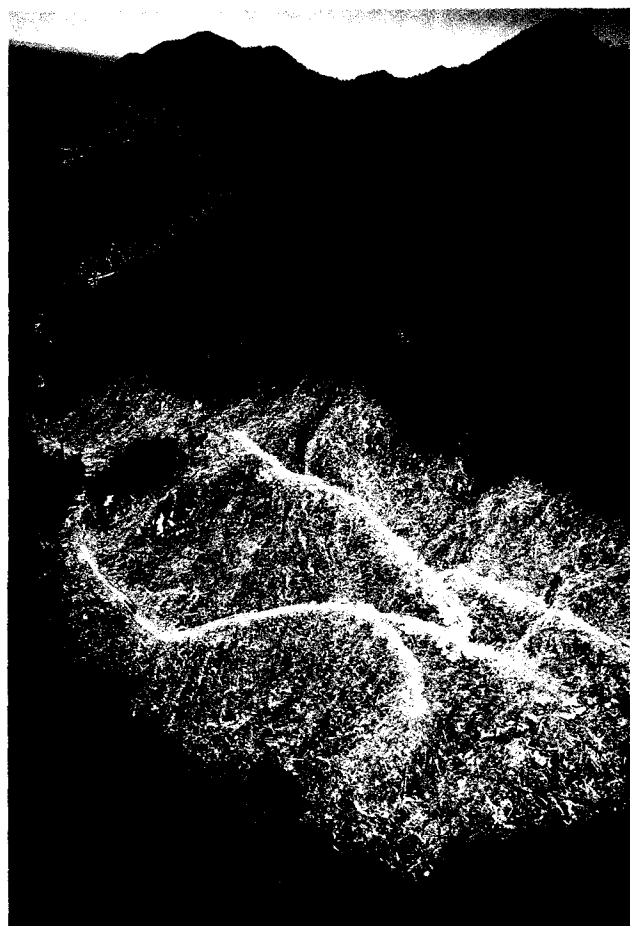

Highland Climates of Low Latitudes 277

11 Midlatitude and High-Latitude Climates 282

Overview of the Midlatitude Climates 283

The Dry Subtropical Climate ⑤ 284

Working It Out 11.1 • Standard Deviation and Coefficient of Variation 286

The Subtropical Desert Environment 288

The Moist Subtropical Climate ⑥ 289

The Moist Subtropical Forest Environment 289

The Mediterranean Climate ⑦ 291

The Mediterranean Climate Environment 293

The Marine West-Coast Climate ⑧ 296

The Marine West-Coast Environment 297

Focus on Systems 11.2 • California Rainfall Cycles and El Niño 298

The Dry Midlatitude Climate ⑨ 300

The Dry Midlatitude Environment 301

Eye on the Environment 11.3 • Drought and the Dust Bowl 302

The Moist Continental Climate ⑩ 303

The Moist Continental Forest and Prairie Environment 303

Overview of the High-Latitude Climates 305

The Boreal Forest Climate ⑪ 306

The Boreal Forest Environment 307

The Tundra Climate ⑫ 307

The Arctic Tundra Environment 308

Geographers at Work • Unearthing the Secrets of the Spanish Flu 310

Arctic Permafrost 310

The Ice Sheet Climate ⑬ 310

The Ice Sheet Environment 311

Our Changing Climate 311

A Closer Look: Eye on Global Change 11.4 • Regional Impacts of Climate Change on North America 318

Part 3 Systems and Cycles of the Solid Earth 326**12 Earth Materials and the Cycle of Rock Change 328****The Crust and Its Composition 329**

Rocks and Minerals 330

Working It Out 12.1 • Radioactive Decay 331

Igneous Rocks 333

Common Igneous Rocks

Intrusive and Extrusive Igneous Rocks 334

Eye on the Environment 12.2 • Battling Iceland's Heimaey Volcano 336

Chemical Alteration of Igneous Rocks 338

Sediments and Sedimentary Rocks 338

Clastic Sedimentary Rocks 340

Chemically Precipitated Sedimentary Rocks 341

Hydrocarbon Compounds in Sedimentary Rocks 341

Metamorphic Rocks 343**The Cycle of Rock Change 344**

Focus on Remote Sensing 12.3 • Geologic Mapping with ASTER 346

Focus on Systems 12.4 • Powering the Cycle of Rock Change 348

13 The Lithosphere and the Tectonic System 354**The Structure of the Earth 356**

The Earth's Interior 356

The Lithosphere and Asthenosphere 357

The Geologic Time Scale 358

Working It Out 13.1 • Radiometric Dating 359

Major Relief Features of the Earth's Surface 359

Relief Features of the Continents 360

Relief Features of the Ocean Basins 362

Plate Tectonics 363

Tectonic Processes 363

Plate Motions and Interactions 366

The Global System of Lithospheric Plates 369

Focus on Systems 13.2 • The Wilson Cycle and Supercontinents 370

Subduction Tectonics 374

Orogens and Collisions 374

Continental Rupture and New Ocean Basins 376

Continents of the Past 378

Focus on Systems 13.3 • The Power Source for Plate Movements 379

Geographers at Work • Paleogeography: Clues to the Causes of "Snowball Earth" 380

14 Volcanic and Tectonic Landforms 386**Landforms 387****Volcanic Activity 388**

Stratovolcanoes 388

Shield Volcanoes 389

Focus on Systems 14.1 • The Life Cycle of a Hotspot Volcano 394

Volcanic Activity over the Globe 396

Eye on the Environment 14.2 • Geothermal Energy Sources 397

Volcanic Eruptions as Environmental Hazards 398

Landforms of Tectonic Activity 399

Fold Belts 399

Faults and Fault Landforms 399

Focus on Remote Sensing 14.3 • Remote Sensing of Volcanoes 400

The Rift Valley System of East Africa 404

Earthquakes 404

Earthquakes and Plate Tectonics 406

Seismic Sea Waves 407

Working It Out 14.4 • The Richter Scale 408

Earthquakes along the San Andreas Fault 408

Eye on Environment 14.5 • The Northridge Earthquake 412

Part 4 Systems of Landform Evolution 416**15 Weathering and Mass Wasting 418****Physical Weathering 420**

Frost Action 420

Salt-Crystal Growth 421

Unloading 421

Other Physical Weathering Processes 421

Chemical Weathering and Its Landforms 421

Hydrolysis and Oxidation 424

Acid Action 425

Mass Wasting 426

Slopes 428

Soil Creep 428

Earthflow 429

Environmental Impact of Earthflows 429

Mudflow and Debris Flood 430

Landslide 431

Induced Mass Wasting 433

Induced Earthflows 433

Eye on the Environment 15.1 • *The Great*

Hebgen Lake Disaster 434

Working It Out 15.2 • *The Power of Gravity* 435

Scarification of the Land 436

Processes and Landforms of Arctic and Alpine Tundra 437

Arctic Permafrost 437

Forms of Ground Ice 438

Focus on Systems 15.3 • *Permafrost as an*

Energy Flow System 440

Patterned Ground and Solifluction 440

Alpine Tundra 443

Environmental Problems of Permafrost 443

16 The Cycling of Water on the Continents 448

Ground Water 451

The Water Table Surface 451

Aquifers 452

Limestone Solution by Ground Water 453

Limestone Caverns 453

Karst Landscapes 454

Problems of Ground Water Management 454

Water Table Depletion 455

Contamination of Ground Water 457

Surface Water 457

Overland Flow and Stream Flow 457

Eye on Global Change 16.1 • *Sinking Cities* 458

Stream Discharge 459

*Geographers at Work • Energy and Water Flows
in the High Arctic* 460

Focus on Systems 16.2 • *Energy in Stream Flow* 462

Drainage Systems 463

Stream Flow 464

How Urbanization Affects Stream Flow 465

The Annual Flow Cycle of a Large River 465

River Floods 466

Flood Prediction 467

The Mississippi Flood of 1993 467

Lakes 467

Working It Out 16.3 • *Magnitude and Frequency
of Flooding* 470

Saline Lakes and Salt Flats 473

Desert Irrigation 473

Pollution of Surface Water 474

Surface Water As a Natural Resource 475

A Closer Look: Eye on Global Change 16.4 • *The Aral
Sea—A Dying Saline Lake* 479

17 Fluvial Processes and Landforms 482

Fluvial Processes and Landforms 484

Erosional and Depositional Landforms 484

Slope Erosion 484

Accelerated Erosion 484

Sheet Erosion and Rilling 485

Colluvium and Alluvium 486

Slope Erosion in Semiarid and Arid Environments 486

The Work of Streams 487

Stream Erosion 487

Stream Transportation 488

Capacity of a Stream to Transport Load 488

Stream Gradation 489

Working It Out 17.1 • *River Discharge and Suspended
Sediment* 490

Landscape Evolution of a Graded Stream 491

Focus on Remote Sensing 17.2 • *A Canyon Gallery* 494

Great Waterfalls 496

Dams and Resources 497

*Geographers at Work • On the Road to "Dam
Nation"* 497

Focus on Systems 17.3 • *Stream Networks as Trees* 498

Aggradation and Alluvial Terraces 500

Alluvial Rivers and Their Floodplains 502

Entrenched Meanders 504

The Geographic Cycle 504

Equilibrium Approach to Landforms 505

Fluvial Processes in an Arid Climate 506

Alluvial Fans 507

The Landscape of Mountainous Deserts 510

18 Landforms and Rock Structure 514

Rock Structure as a Landform Control 516

Strike and Dip 516

Landforms of Horizontal Strata and Coastal Plains 516

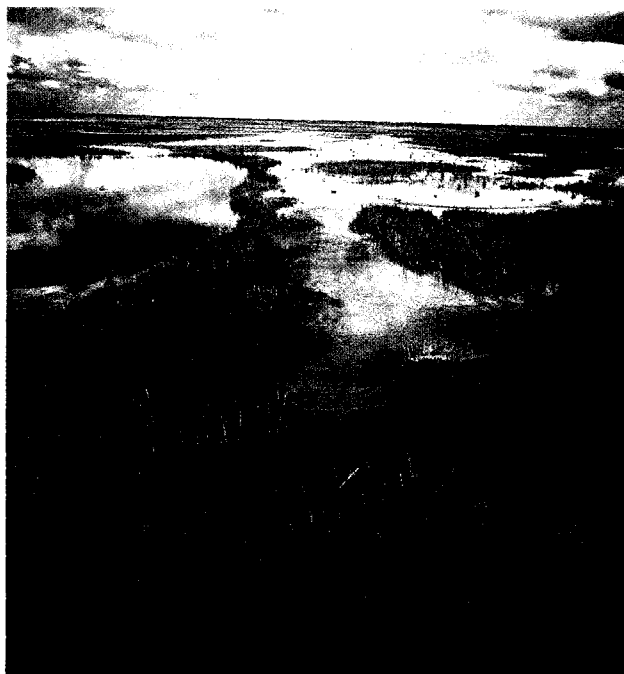

Arid Regions 516

Focus on Remote Sensing 18.1 • *Landsat Views Rock
Structures* 518

Drainage Patterns on Horizontal Strata 520

Coastal Plains 521

Working It Out 18.2 • Properties of Stream Networks 522

Landforms of Warped Rock Layers 524

Sedimentary Domes 524

Fold Belts 526

Landforms Developed on Other Land-Mass Types 527

Erosion Forms on Fault Structures 527

Metamorphic Belts 527

Focus on Systems 18.3 • A Model Denudation System 528

Exposed Batholiths and Monadnocks 530

Deeply Eroded Volcanoes 531

Eye on the Environment 18.4 • Marvelous, Majestic, Monolithic Domes 532

19 | The Work of Waves and Wind 540

The Work of Waves 542

Marine Cliffs 542

Beaches 542

Littoral Drift 542

Focus on Systems 19.1 • The Coastal Sediment Cell as a Matter Flow System 547

Littoral Drift and Shore Protection 548

Tidal Currents 548

Tidal Current Deposits 549

Types of Coastlines 549

Shorelines of Submergence 550

Barrier-Island Coasts 551

Delta and Volcano Coasts 552

Coral-Reef Coasts 553

Raised Shorelines and Marine Terraces 553

Rising Sea Level 554

Wind Action 555

Erosion by Wind 555

Dust Storms 557

Sand Dunes 557

Types of Sand Dunes 557

Working It Out 19.2 • Angle of Repose of Dune Sands 560

Coastal Foredunes 563

Loess 563

Induced Deflation 564

A Closer Look: Eye on Global Change 19.3 • Global Change and Coastal Environments 569

20 | Glacier Systems and the Ice Age 574

Glaciers 575

Alpine Glaciers 576

Focus on Systems 20.1 • A Glacier as a Flow System of Matter and Energy 578

Landforms Made by Alpine Glaciers 579

Glacial Troughs and Fiords 580

Ice Sheets of the Present 580

Sea Ice and Icebergs 580

Focus on Remote Sensing 20.2 • Remote Sensing of Glaciers 582

The Ice Age 585

Glaciation During the Ice Age 586

Landforms Made by Ice Sheets 588

Erosion by Ice Sheets 588

Deposits Left by Ice Sheets 588

Working It Out 20.3 • Isostatic Rebound 590

Environmental Aspects of Glacial Deposits 593

Investigating the Ice Age 593

Possible Causes of the Late-Cenozoic Ice Age 596

Geographers at Work • Ice Coring: Looking for Evidence of Climate Change 596

Possible Causes of Glaciation Cycles 597

Eye on Global Change 20.4 • Ice Sheets and Global Warming 598

Holocene Environments 600

Part 5 | Systems and Cycles of Soils and the Biosphere 604

21 | Soil Systems 606

The Nature of the Soil 608

Soil Color and Texture 608

Soil Colloids 609

Soil Acidity and Alkalinity 610

Soil Structure 610

Minerals of the Soil 610

Soil Moisture 611

The Soil Water Balance 612

A Simple Soil Water Budget 613

Soil Development 613

Working It Out 21.1 • Calculating a Simple Soil Water Budget 614

Soil Horizons 614
 Soil-Forming Processes 615
 Soil Temperature and Other Factors 617
Eye on the Environment 21.2 • Death of a Civilization 618
The Global Scope of Soils 619
 Soil Orders 620
 Desert and Tundra Soils 630
 A Midcontinental Transect from Aridisols to Alfisols 631
Global Climate Change and Agriculture 632
A Closer Look: Eye on Global Change 21.3 • Global Climate Change and Agriculture 635

22 Systems and Cycles of the Biosphere 638

Energy Flow in Ecosystems 640
 The Food Web 640
 Photosynthesis and Respiration 641
 Net Photosynthesis 641
Working It Out 22.1 • Logistic Population Growth 644
 Net Primary Production 647
 Net Production and Climate 648
Biomass as an Energy Source 649
Focus on Systems 22.2 • Agricultural Ecosystems 650
Geographers at Work • What Would Happen If...? 652
Biogeochemical Cycles in the Biosphere 652
 Nutrient Elements in the Biosphere 653
 The Carbon Cycle 653
 The Oxygen Cycle 654
 The Nitrogen Cycle 655
Eye on Global Change 22.3 • Human Impact on the Carbon Cycle 656
 Sedimentary Cycles 658
A Closer Look: Focus on Remote Sensing 22.4 • Monitoring Global Productivity from Space 664

23 Biogeographic Processes 670

Ecological Biogeography 671
 Water Need 672
 Temperature 673
 Other Climatic Factors 675
 Bioclimatic Frontiers 676
 Geomorphic Factors 677
 Edaphic Factors 678

Disturbance 678
 Interactions Among Species 679
Eye on the Environment 23.1 • The Great Yellowstone Fire 680
Focus on Remote Sensing 23.2 • Remote Sensing of Fires 682
Ecological Succession 684
 Succession, Change, and Equilibrium 685
Historical Biogeography 689
 Evolution 689
 Speciation 689
 Extinction 690
 Dispersal 691
 Distribution Patterns 693
Working It Out 23.3 • Island Biogeography: The Species-Area Curve 694
 Biogeographic Regions 697
Biodiversity 697

24 Global Ecosystems 702

Natural Vegetation 703
Structure and Life-Form of Plants 704
Terrestrial Ecosystems—The Biomes 705
 Forest Biome 706
Focus on Remote Sensing 24.1 • Mapping Global Land Cover by Satellite 708
Eye on the Environment 24.2 • Exploitation of the Low-Latitude Rainforest Ecosystem 714
Geographers at Work • Mapping Forest Ecosystems and Their Biophysical Characteristics with Remote Sensing 719
 Savanna Biome 723
 Grassland Biome 723
 Desert Biome 725
 Tundra Biome 725
 Altitude Zones of Vegetation 728
 Climatic Gradients and Vegetation Types 729
