1. Introduction: Approaches to Risk and Uncertainty in Environmental and Resource Economics <i>Justus Wesseler, Hans-Peter Weikard and Robert D. Weaver</i>	1
PART I: IMPORTANCE OF ENVIRONMENTAL RISK AND UNCERTAINTY	
2. Irreversibilities and Catastrophic Risks in Climate Change <i>Anthony C. Fisher</i>	9
3. On the Quasi-Option Value of Biodiversity and Conservation <i>Hans-Peter Weikard</i>	23
4. Optimal Environmental Development under Differing Stochastic Regimes <i>Shirra Freeman and Naomi Zeitouni</i>	39
PART II: IMPLICATIONS FOR ECONOMIC DEVELOPMENT AND ENVIRONMENTAL POLICIES	
5. Public-Private Environmental Conflicts <i>Sung Hoon Park and Jason F. Shogren</i>	61
6. Fish Wars Revisited: A Stochastic Incomplete-Information Harvesting Game <i>Robert McKelvey, Kathleen Miller and Peter Golubtsov</i>	93
7. Climate Change Scenarios and the Precautionary Principle <i>Rossella Bargiacchi</i>	113
8. Risk, Pollution Abatement and Endogenous Growth: The Impact of Perception <i>Susanne Soretz</i>	131

9.	Securitizing the Environment: A Property Rights Approach to Managing Climate Change	151
	<i>Stephen C. Peck and Thomas J. Teisberg</i>	
10.	Risk Aversion in Economic Decision Making: Pragmatic Guides for Consistent Choice by Natural Resource Managers	171
	<i>Jock R. Anderson and J. Brian Hardaker</i>	
11.	Uncertainty Analysis in Integrated Assessment Models for Acidification	189
	<i>Silke Gabbert and Carolien Kroeze</i>	

PART III: IMPACT ON PRIVATE SECTOR RESPONSE

12.	Stochastic Dominance Portfolio Analysis of Forestry Assets	217
	<i>Veli-Pekka Heikkinen and Timo Kuosmanen</i>	
13.	Weather-based Index Insurance to Hedge Temperature Exposure of Greenhouse Horticultural Firms	235
	<i>Marcel A.P.M. van Asseldonk and Alfons G.J.M. Oude Lansink</i>	
14.	Parents' Valuation of Latent Health Risks to their Children	251
	<i>Mark Dickie and Shelby Gerking</i>	
15.	The Effect of Heavy Metal Content on Food Pricing Behaviour: Experimental Assessment	279
	<i>Anne Rozan, Anne Stenger and Marc Willinger</i>	

<i>Index</i>	295

Figures

3.1	Decision trees with and without learning	27
5.1	Nash equilibrium with an effort-independent sharing rule	66
5.2	Effort levels with δ and m	71
5.3	Contest efficiency with an effort-dependent sharing rule and the number of firms: (a) $V_c \geq G$, (b) $V_c < G$	73
5.4	Relationship between β and δ	78
5A1.1	Effort with the number of firms	86
5A1.2	Contest efficiency with the number of firms: (a) $V_c \geq G$, (b) $V_c < G$	87
6.1	Cubic growth function	96
6.2	Harvesting with compensatory growth (CompFactor = 3)	100
6.3	Harvesting with critical depensation (CompFactor = 0.6)	100
6.4	Effect of increasing environmental variability (CompFactor = 0.6)	102
6.5	Harvesting with information of varying quality (CompFactor = 3)	103
6.6	Harvesting with information of varying quality (CompFactor = 0.6)	104
6.7	Effect of change in mean θ (CompFactor = 1)	105
6.8	Natural asymmetry and asymmetric information (CompFactor = 1)	106
7.1	Convex transformation function and relative decision weights	121
7.2	Inverse S-shaped transformation function	122
7.3	Example of three scenarios and relative cross-scenario RDU and EU functions	126
7.4	Example showing the optimum for the RDU function lying to the right of the optimum for the EU function	127
8.1	Growth impact of perceived pollution	141
8.2	Optimal income tax rate	145
8.3	Optimal subsidy rate	146
10.1	Graphical representation of the cost of ignoring risk aversion	183
11.1	Diagnostic diagram to assess the quality of a model parameter	203
12.1	Cumulative return distribution of Stand #165, compared to the normal distribution with the equal mean and variance	229

13A1.1	Alternative contract formats of weather derivatives	249
14.1	Parent's lifetime chance of melanoma skin cancer	258
14.2	Sample of hypothetical sunscreen label	262

Tables

3.1	Expected diversity values for different combinations of m and k	33
9.1	Cost increase in 2010 due to \$6.50/ton shadow price of carbon	156
9.2	Cost implications in 2010 of alternative concentration targets	157
9.3	Permit value implications in 2010 of alternative concentration targets	160
11.1	Overview of selected IAMs for acidification	194
11.2	Problem-specific classification systems of uncertainties in IA modelling	197
11.3	Methods used for uncertainty analysis in selected IAMs for acidification	200
12.1	Characteristics of the four harvestable stands	227
12.2	Shapiro–Wilks normality test statistics and the associated significance levels	228
12.3	SSD efficiency test statistics	229
12.4	Total computation times of different SD statistics	231
13.1	Description of data and variability	241
13.2	Results of estimation profit function	245
13.3	Error terms in estimated functions	246
13.4	Simulated coefficient of variation per firm without and with a derivative contract and the maximum effectiveness of a derivative contract	246
14.1	Mean values of perceived risk	259
14.2	Number of ‘yes’ and ‘no’ responses by initial price	261
14.3	Parent’s perception of children’s skin cancer risk, 3 SLS estimates	266
14.4	Parent’s willingness to pay for reductions in skin cancer risk	269
14A1.1	Reduced-form equations, estimated coefficients	273
14A1.2	Reduced-form equations, changes in perceived risk, estimated coefficients	276
15.1	Main characteristics of the sample	284
15.2	Mean buying prices elicited by the BDM procedure	288
15.3	Entry and exit behaviour	289

15.4	Mean hypothetical value for each product elicited by the BDM procedure	289
15.5	Average rate of value increase/decrease per product	290
15A1.1	Prices elicited by the BDM procedure: some indicators	293
15A1.2	Values elicited by the BDM procedure: some indicators	293
