## INTERACTIONS IN THE ROOT ENVIRONMENT: AN INTEGRATED APPROACH

*Proceedings of the Millenium Conference on Rhizosphere Interactions,  
IACR-Rothamsted, United Kingdom, 10–12 April, 2001*

Foreword	1
<i>Section 1. Signalling and recognition in the root environment</i>	
1. Analysis of <i>N</i> -acyl homoserine-lactone quorum-sensing molecules made by different strains and biovars of <i>Rhizobium leguminosarum</i> containing different symbiotic plasmids J.K. Lithgow, V.E. Danino, J. Jones & J.A. Downie	3
2. Signalling between arbuscular mycorrhizal fungi and plants: identification of a gene expressed during early interactions by differential RNA display analysis H. Roussel, D. van Tuinen, P. Franken, S. Gianinazzi & V. Gianinazzi-Pearson	13
3. Methods for studying the nematophagous fungus <i>Verticillium chlamydosporium</i> in the root environment P.R. Hirsch, S.D. Atkins, T.H. Mauchline, C.O. Morton, K.G. Davies & B.R. Kerry	21
4. Does allelopathy offer real promise for practical weed management and for explaining rhizosphere interactions involving higher plants? M.A. Birkett, K. Chamberlain, A.M. Hooper & J.A. Pickett	31
<i>Section 2. Root structure and function</i>	
5. Root proliferation, nitrate inflow and their carbon costs during nitrogen capture by competing plants in patchy soil D. Robinson	41
6. The nutritional control of root development B. Forde & H. Lorenzo	51
7. Effect of phosphorus availability on basal root shallowness in common bean H. Liao, G. Rubio, X. Yan, A. Cao, K.M. Brown & J.P. Lynch	69
8. A comparison of structure, development and function in cluster roots of <i>Lupinus albus</i> L. under phosphate and iron stress J. Hagström, W.M. James & K.R. Skene	81
<i>Section 3. Biologically-mediated processes in the root environment</i>	
9. Rhizosphere carbon flow measurement and implications: from isotopes to reporter genes K. Killham & C. Yeomans	91

10. Soil and rhizosphere as habitats for <i>Pseudomonas</i> inoculants: new knowledge on distribution, activity and physiological state derived from micro-scale and single-cell studies J. Sørensen, L.E. Jensen & O. Nybroe	97
11. Sulphur and phosphorus transport systems in plants F.W. Smith	109
12. Incorporating rhizosphere processes into field-scale (agro)ecosystem models J. Arah	119
13. Plant-mediated processes to acquire nutrients: nitrogen uptake by rice plants G.J.D. Kirk	129

#### *Section 4. Biodiversity in the root environment*

14. Plants and fertilisers as drivers of change in microbial community structure and function in soils A.G. O'Donnell, M. Seasman, A. Macrae, I. Waite & J.T. Davies	135
15. Soil fungi: diversity and detection P. Bridge & B. Spooner	147
16. On the relationships between nematodes, mycorrhizal fungi and plants: functional composition of species and plant performance L. Brussaard, T.W. Kuyper & R.G.M. de Goede	155
17. Bacterial diversity of the rhizosphere of maize ( <i>Zea mays</i> ) grown in tropical soil studied by temperature gradient gel electrophoresis N.C.M. Gomes, H. Heuer, J. Schönfeld, R. Costa, L. Mendonça-Hagler & K. Smalla	167
18. Monitoring temporal and spatial variation in rhizosphere bacterial population diversity: A community approach for the improved selection of rhizosphere competent bacteria V.J. Goddard, M.J. Bailey, P. Darrah, A.K. Lilley & I.P. Thompson	181

#### *Section 5. Exploitation of rhizosphere interactions*

19. Enhancing the biocontrol efficacy of <i>Pseudomonas fluorescens</i> F113 by altering the regulation and production of 2,4-diacetylphloroglucinol I.R. Delany, U.F. Walsh, I. Ross, A.M. Fenton, D.M. Corkery & F. O'Gara	195
20. Plant and rhizosphere processes involved in phytoremediation of metal-contaminated soils S.P. McGrath, F.J. Zhao & E. Lombi	207
21. An integrated approach for the evaluation of biological control of the complex <i>Polymyxa betae</i> /Beet Necrotic Yellow Vein Virus, by means of seed inoculants R. Resca, M. Basaglia, S. Poggiolini, P. Vian, S. Bardin, U.F. Walsh, C.M. Enriquez Barreiros, F. O'Gara, M.P. Nuti, S. Casella & U. Peruch	215
