

CONTENTS

Preface	v
Acknowledgements	vii
PART 1. INTRODUCTION	1
1. Introduction	3
<i>I. Ethem Gonenc and Biymyrza Toktoraliev</i>	
PART 2. DECISION MAKING IN RAPID ASSESSMENT AND DIAGNOSIS OF CBRN EFFECTS ON COASTAL LAGOONS	9
2. Decision Making in Rapid Assessment and Diagnosis of CBRN Effects on Coastal Lagoons	11
<i>John P. Wolflin, Karen Terwilliger and Rosemarie C. Russo</i>	
2.1. Introduction	11
2.2. Decision Making in Rapid Assessment and Response	12
2.2.1. Inventory Information, Processes, and Infrastructures	12
2.2.2. Decision-Making Tools	13
2.2.2.1. Modeling	14
2.2.2.2. Graphical User Interfaces	15
2.2.2.3. Monitoring	16
2.2.2.4. Indicators	16
2.2.3. Assessment Tools	17
2.2.3.1. Environmental Sensitivity Index (ESI)	17
2.2.3.2. Social Impact Assessment (SIA)	25
2.2.3.3. Environmental Assessment (EA)	26
2.2.3.4. SEA Toolkit	28
2.2.4. Decision-Making Approach (Model)	33
2.2.4.1. Classical Rational Decision-Making Model	33
2.2.4.2. Organizational Process Model	33
2.2.4.3. Bureaucratic Politic Model	34
2.2.4.4. Decision-Making Process for Rapid Assessment	34

2.2.5. Development and Implementation of a Response Plan (RP)	36
2.2.5.1. Steps in the Response Planning Process	38
2.2.5.2. Roles and Responsibilities	40
2.2.5.3. Case Studies	43
2.3. Preparation of a Continuity of Operations Plan	47
2.4. Conclusion	52

PART 3. PHYSICAL PROCESSES AND MODELING **53**

3. Physical Processes in Lagoons **55**

Irina Chubarenko

3.1. Introduction	55
3.2. Part I: External Conditions	56
3.2.1. System of Coordinates: The Rotating Earth	56
3.2.2. Main External Forcing	59
3.2.2.1. Gravity	59
3.2.2.2. Winds	61
3.2.2.3. Radiation	63
3.2.3. Water Properties	65
3.2.3.1. Structure of Water Molecule	65
3.2.3.2. Water Density	66
3.3. Part II: Internal Structure and Water Dynamics	67
3.3.1. Stratification	68
3.3.1.1. Seasonal Cycle of Water Stratification	68
3.3.2. Wind-Induced Motions	71
3.3.3. Water Exchange with the Sea, Tides, River Inflows	76
3.3.4. Gravity Currents	77
3.3.5. Coupling Physics and Other Processes	78
3.4. Conclusions	79
3.4.1. Important Conclusions of External Condition	79
3.4.2. Important Conclusions of Internal Structure and Water Dynamics	79
3.4.3. Concluding Remarks	79

4. Hydrodynamic Equations **83**

Georg Umgiesser

4.1. Introduction	83
4.2. The Eulerian and the Lagrangian View	83
4.3. Conservation Laws	86
4.3.1. Conservation of Mass	86

4.3.2. Conservation of Momentum	88
4.3.2.1. The Euler Equations	88
4.3.2.2. The Euler Equations in a Rotating Frame of Reference	89
4.3.2.3. The Navier–Stokes Equations	90
4.3.3. Conservation of Energy	93
4.3.4. Conservation of Salt	93
4.3.5. Equation of State	94
4.4. Simplifications and Scale Analysis	94
4.4.1. Incompressibility	95
4.4.2. The Hydrostatic Approximation	95
4.4.3. The Coriolis Force	96
4.4.4. The Reynolds Equations	97
4.4.5. The Primitive Equations	99
4.5. The Shallow Water Equations	100
4.6. Boundary Processes	103
4.6.1. Initial Conditions	104
4.6.2. Material Boundary Conditions	105
4.6.3. Open Boundaries Conditions	105
4.6.4. Conditions on the Sea Surface and the Bottom	106
5. Monitoring Physical Processes	109
<i>Boris V. Chubarenko</i>	
5.1. Introduction	109
5.2. Definition and Objectives of Environmental Monitoring	110
5.3. Multi-Purposefulness of Monitoring Activity	112
5.4. Types of Monitoring	114
5.5. Baseline and Targeted Monitoring From a View of System Approach	115
5.6. Monitoring Parameters	116
5.7. Spatial Schemes of Monitoring	119
5.8. Types of Monitoring Measurements	121
5.9. Temporal Schedule of Monitoring	122
5.10. Monitoring and Short-Term Data Collection Dedicated to Modelling	123
6. Time Series Analysis of Lagoon Variables	127
<i>Vladimir G. Koutitonsky</i>	
6.1. Introduction	127
6.2. Lagoon Time Series	127
6.3. Time Series Preprocessing	128
6.4. Time Domain Analysis	129

6.5. Filters	133
6.6. Frequency Domain Analysis	134
6.6.1. Spectral Analysis	134
6.6.2. Harmonic Analysis	139
6.7. Summary	142
7. Discretization Techniques	143
<i>Georg Umgiesser</i>	
7.1. Introduction	143
7.2. The Basics	143
7.2.1. Discretization	143
7.2.2. Requirements	144
7.3. The Decay Equation—A Simple Example	145
7.3.1. Basic Discretization Formulas	146
7.3.2. Accuracy	147
7.3.3. Stability	148
7.4. Inertial Motion—A System of Equations	151
7.4.1. Matrices and Eigenvalues	152
7.4.2. Various Schemes	153
7.5. The Diffusion Equation—The Spatial Dimension	154
7.5.1. First and Second Spatial Derivative	154
7.5.2. Explicit and Implicit Schemes	155
7.5.3. Stability	156
7.5.4. The Von Neuman Stability Analysis	157
7.6. The Transport Equation	158
7.6.1. The FTCS Scheme	159
7.6.2. The Forward and Backward Scheme	160
7.6.3. The Propagation Cone	162
7.6.4. The Leap-Frog Scheme	164
7.6.5. Final Thoughts	165
7.7. Gravity Waves	166
7.7.1. Staggered Schemes	166
7.7.2. Stability of Schemes	167
7.7.3. The Shallow Water Equations	168
7.8. Conclusions	169
8. Numerical Models as Decision Support Tools in Coastal Areas	171
<i>Ramiro Neves</i>	
8.1. Decision Support Tools	171
8.2. Brief History of Modelling Tools	172

8.3. MOHID	174
8.4. MOHID: A Modular System	175
8.4.1. Model Module	175
8.4.1.1. Introduction	175
8.4.1.2. Single Model	175
8.4.1.3. Nested Models	176
8.4.2. Bathymetry Module	176
8.4.3. Geometry Module	177
8.4.3.1. Finite Volume	178
8.4.3.2. Vertical Coordinates	178
8.4.4. Hydrodynamic Module	179
8.4.4.1. Open Boundary Conditions	180
8.4.4.2. Moving Boundaries	181
8.4.5. Lagrangian Module	182
8.4.5.1. Tracer Concept	182
8.4.5.2. Tracer Movement	184
8.4.5.3. Turbulent Diffusion	184
8.4.5.4. Monitoring Boxes	185
8.4.6. Oil Module	186
8.4.6.1. Implementation	186
8.4.6.2. Oil-Beaching	187
8.4.6.3. Removal Techniques	187
8.4.7. Water Properties Module	187
8.4.8. Water Quality Module	187
8.4.9. Surface Module	188
8.4.9.1. Wind	189
8.4.9.2. Heat Fluxes	189
8.4.9.3. Solar Radiation	189
8.4.10. Bottom Module	189
8.4.11. Free Vertical Movement Module	190
8.4.12. Hydrodynamic File Module	190

PART 4. EFFECTS OF CBRN AGENTS ON AQUATIC ECOSYSTEM

197

9. The Ecosystem Approach Applied to the Management of the Coastal Socio-Ecological Systems

199

Angheluta Vadineanu

9.1. Introduction	199
9.2. Processes and Functions	207

9.3. Functional Values and Socio-Economic Valuation	209
9.4. Lower Danube Wetlands System Case study	211
9.5. Conclusions	220
10. Developing the D-P-S-I-R Framework of Indicators for Management of Human Impact on Marine Ecosystems: Baltic Sea Example	225
<i>Eugeniusz Andruliewicz</i>	
10.1. Introduction	225
10.2. The Conceptual Frameworks of Environmental Quality Indicators and Indices	226
10.3. Examples of P-S-R Indicators for the Main Environmental Concerns	229
10.3.1. Eutrophication	229
10.3.2. Overfishing	230
10.3.3. Contamination by Harmful Substances	231
10.3.4. Oil Pollution/Marine Transport	232
10.3.5. Invasion of Non-Indigenous Species	234
10.3.6. Sanitary Pollution	234
10.3.7. Dredge Spoils Dumping	234
10.3.8. Extraction of Sand and Gravel	235
10.3.9. Offshore Oil and Gas Production	235
10.3.10. Artificial Radionuclides	236
10.3.11. Coastal Degradation	237
10.3.12. Loss of Biodiversity and Habitat Destruction	238
10.4. Illustrative Examples of D-Type Indicators	239
10.5. Summary and Conclusions	240
11. Phytoplankton Ecological Processes for Ecosystem Modeling: Some Basic Concepts	245
<i>Javier Gilabert</i>	
11.1. Introduction	245
11.2. Phytoplankton Systematic and Functional Diversity	245
11.3. Environmental Factors Controlling Phytoplankton Biomass	249
11.4. Size as an Alternative State Variable	254
12. Modeling Possible Impacts of Terrorist Attacks in Coastal Lagoon Ecosystems with Stella	259
<i>Sofia Gamito</i>	
12.1. Ecosystem Organization	259
12.1.1. Food Webs	259

12.1.2. Keystone Species and Reproductive Strategies	260
12.1.3. Mature Ecosystems Vs. Developmental Stages	261
12.2. Ecosystem Succession	261
12.3. Pollutants and Bioamplification	262
12.4. Coastal Lagoons and Water Renewal Rate	263
12.5. Terrorist Attack Consequences in The Lagoon Ecosystem	263
12.6. Outlines for Modeling	265
12.7. Ecological Modeling with Stella	265
12.8. Model Development	266
12.8.1. Exponential Growth Model	266
12.8.2. Logistic Growth Model	267
12.8.3. Competition Model	268
12.8.4. Predation Model	271
12.9. Simulation of Different Scenarios	274
12.10. Remarks	278
13. Trophic Network Models and Prediction of Toxic Substances Accumulation in Food Webs	279
<i>Arturas Razinkovas</i>	
13.1. Introduction	279
13.2. Bioaccumulation of Toxic Substances in Food Webs	280
13.3. Bioaccumulation Web Models	282
13.4. ECOPATH	283
13.5. ECOSIM	284
13.6. ECOTRACE	285
14. Assessment of Lake Ecosystem Response to Toxic Events with the AQUATOX Model	291
<i>Brenda Rashleigh</i>	
14.1. Introduction	291
14.2. The AQUATOX Model	292
14.3. General AQUATOX Model Results: Factors Determining the Aquatic Ecosystem Response	293
14.3.1. Characteristics of Fish Species	293
14.3.2. Timing and Amount of the Chemical	293
14.4. Coralville Reservoir Example	294
14.5. Summary	296
15. Chemical Weapons Dumped in the Baltic Sea	299
<i>Eugeniusz Andruliewicz</i>	
15.1. Introduction	299
15.1.1. Short History of Use of Chemical Weapons	299

15.1.2. Classification and Properties of Chemical Warfare Agents	301
15.1.3. Chemical Warfare Agents in the Marine Environment	301
15.2. Chemical Ammunition	304
15.2.1. Classification of Chemical Ammunition	304
15.2.2. Dumping the Chemical Weapon in the World Ocean	304
15.2.3. Chemical Weapon Dumped in the Baltic Sea	304
15.2.4. Immediate Effects After Dumping	308
15.3. Selected Cases of Contacts with Chemical Munitions in The Baltic Sea Area	311
15.3.1. Injuries of Children, 1955	311
15.3.2. Injuries of Fishermen, 1997	311
15.4. Research on Dumped Chemical Weapon in The Baltic Sea	311
15.4.1. Results of German Studies, 1994–1996	312
15.4.2. Results of Russian Research, 2001	312
15.4.3. Results of Studies in Other Countries	313
15.4.4. New/Ongoing Research Projects	314
15.5. Lessons Learned from Unintentional Human Contact with Dumped Chemical Munitions	314
15.6. Designing Research on Dumped Chemical Weapons	315
15.7. Conclusions and Comments	317
16. Monitoring After Attack	321
<i>Natalia N. Kazantseva</i>	
16.1. Introduction	321
16.2. Critical Points	322
16.3. Chemical and Biological Monitoring and Detection	324
 PART 5. DECISION MAKING IN RAPID ASSESSMENT AND DIAGNOSIS OF CBRN EFFECTS ON COASTAL LAGOONS	 327
17. Case Study: Dieldrin Attack in Dalyan Lagoon	329
<i>Ali Erturk, Robert B. Ambrose, Jr., P.E., and Brenda Rashleigh</i>	
17.1. Background	329
17.1.1. Attack Scenario	329
17.1.2. Description of Dalyan Lagoon	329
17.1.3. Organization of Teams	334

17.2. Tools and Techniques	336
17.2.1. The WASP7 Surface Water Body Model	337
17.2.2. The AQUATOX Surface Water Ecology Model	338
17.2.3. The Environmental Fluid Dynamics Code, EFDC	339
17.3. Results and Discussion	339
17.3.1. WASP7 Simulation Results	340
17.3.2. AQUATOX Simulation Results	356
17.3.3. Results from Emergency Response Team	358
17.4. Conclusions and Recommendations	366
17.4.1. Conclusions from Student Teams	366
17.4.2. Post-Mortem Analysis of Exercise	369
17.4.3. Final Remarks	378
Appendix 1: The WASP7 Surface Water Body Model	387
Appendix 2: Properties of Dieldrin	395
List of Participants	399
