References	415
Index	425

1.	Some semantic roles played by noun phrases in simple sentences	8
2.	Questions requesting specification of a constituent	15
3.	Some indirect (or embedded) <i>wh</i> -questions and the semantic roles they fill	22
4.	A general rule of coordination with examples	27
5.	Successive problems in the paradigm for comprehension of a compound sentence with deletions	46
6.	Major steps in paradigms of <i>wh</i> and <i>yes-no</i> questions	47
7.	Rules for calculating mean length of utterance and upper bound	54
8.	Target values and approximations attained for mean length of utterance and upper bounds	56
9.	Data that can be ordered developmentally	66
10.	Studies including information on Stage I but for which ordering within Stage I is not possible	70
11.	Imitations of spoken sentences	76
12.	Percentages correctly imitated of morphemes in various syntactic classes	77
13.	Some properties of functors (small closed grammatical classes) with examples from English	84
14.	Examples of three types of construction in the speech of Braine's children	92-93
15.	Expansions of child speech produced by mothers	105
16.	Major semantic relations in Stage I as described by Schlesinger (1971) and Bloom (1970)	119
17.	Sentence patterns that correspond to basic grammatical relations	124
18.	Fillmore's case concepts defined and exemplified	133
19.	Multi-word utterances of Adam I classified in case grammar terms	141
20.	Percentages of "good" judgments of three children on four kinds of sentences	162
21.	Cases in which the four most frequent "pivots" expressed a basic operation of reference or referred to self or mother	171
22.	Prevalent semantic relations of two, three, and four terms, expressed as percentages of total multi-morpheme types	174
23.	Prevalent semantic relations, with one term (<i>NP</i>) expanded, expressed as percentages of total multi-morpheme types	175
24.	Percentages of multi-morpheme types expressing prevalent relations and falling into other categories	176
25.	Percentages of multi-morpheme utterances consisting of four varieties of relations of more than two simple terms	183
26.	Percentages of multi-morpheme utterances consisting of relations of more than two simple terms	184
27.	The types of construction in late Stage I English	203
28.	Constituent combinations that occur and constituents that are omitted from	

the main verb paradigm	205
29. Examples of elaborated noun phrases as constituents	209
30. A Schlesinger-type grammar for late Stage I English	214
31. The relations in an <i>I</i> -marker	216
32. A case grammar for late Stage I English	219
33. An illustrative fragment of the base component of adult grammar	228
34. A fragment of the adult categorical component and a Stage I categorical component	232
35. Bloom's reduction transformation and sample strings resulting from its operation	234
36. Performance with <i>be</i> forms classified by allomorphs, contractibility, and copula-auxiliary status	267
37. Performance rank orders for the allomorphs of <i>be</i>	268
38. Mean order of acquisition of 14 morphemes across three children	274
39. The 14 morphemes in order of acquisition for Adam, Eve, and Sarah; together with Leopold's comments on each morpheme, for Hildegard's first two years	278
40. Preservation of morphemes in imitation data of Brown and Fraser	280
41. Brown's acquisition order for the 14 morphemes and the partial rank orders of acquisition of other investigators	281
42. Berko's results for five morphemes are arranged in Brown's order of acquisition	285
43. Berko's data summarized in terms of the type of allomorphic rule	286
44. Percentages correct for kindergarten children of three kinds of allomorphs	287
45. Summary of the grammar of each of the 14 morphemes in Jacobs-Rosenbaum notation	308-309
46. Morphological overgeneralizations of the five inflections from Stages I through V	325-326
47. Nouns in prepositional phrases with <i>in</i> and nouns with <i>on</i> for Eve's samples 9-12	329
48. The relation between definite and nondefinite forms and specific and non-specific reference in speaker and listener	342
49. Circumstances in which a speaker having a specific referent in mind may assume that a definite reference on his part will retrieve the same specific referent in the listener	345
50. Examples of correct instances of definite and nondefinite reference from Adam, Eve, and Sarah from Stages IV to V	352
51. Full list of errors in definite and nondefinite reference for Adam, Eve, and Sarah from Stages IV to V	354
52. Acquisition order (children's) and frequencies for the 14 morphemes plus passives and perfectives in the three sets of parents	358

53.	Acquisition order (children's) and frequency rank orders for the 14 morphemes in the three sets of parents	358
54.	Frequencies of regular allomorphs in the three sets of parents	360
55.	Frequencies of irregular allomorphs in the three sets of parents	360
56.	Frequencies of the various semantic subvarieties of definite and nondefinite articles in the three sets of parents	361
57.	Relations between individual parental frequencies and individual points of acquisition for the three pairs of children	363
58.	Development at Stage V of the regular allomorphs of the contractible copula and parental frequencies for the same allomorphs	365
59a.	Eve's performance with particular phrases requiring the preposition <i>in</i> and the frequencies of those phrases in Eve's parents' speech; phrases occurring one or more times in parental speech from samples 1-6	366
59b.	Eve's performance with particular phrases requiring the preposition <i>in</i> and the frequencies of those phrases in Eve's parents' speech; phrases having zero frequency in parental speech from samples 1-6	367
60.	Mean acquisition order for ten morphemes and the meanings they express or presuppose	369
61.	A partial ordering in terms of cumulative semantic complexity	370
62.	Outcomes of the predictions based on cumulative semantic complexity for Adam, Eve, and Sarah	371
63.	Ratios of irregular and regular allomorph frequencies for three sets of parents (for the three most frequent allomorphs)	373
64.	Present/absent ratios for simple plurals and predicate nominative plurals in three children	374
65.	Present/absent ratios for full and elliptical possessives	375
66.	Acquisition order and transformational complexity order for 13 morphemes	377
67.	A partial ordering in terms of cumulative transformational complexity	378
68.	Presence and absence of copula <i>be</i> forms with noun phrase and pronoun subjects in samples 15-17 for Adam and Eve	383
69.	Correct and overgeneralized uses of <i>That-a</i> in Adam	393
70.	Articles at three points in time for Adam	394
71.	Maximum-likelihood parse of section 551	398

1. Mean utterance length and chronological age for three children	55
2. Mean utterance length and age in three children	57
3. Derivations and tree structures for $N+N$ constructions of four kinds	109
4. Comparison of Schlesinger's and Bloom's representations of a sentence	116
5. Tree structure for a simple sentence	121
6. Deep structure rules for case grammar	135
7. Sample deep structures generated by case grammar	137
8. Pictures illustrating agent-object relations	159
9. Tree structures for main verb sentences generated by a case grammar	219
10. Tree structures for missing copula sentences generated by a case grammar	220
11. Tree structures for noun phrases generated by a case grammar	220
12. The development of progressive and plural inflections in Sarah	256
13. The prepositions <i>in</i> and <i>on</i> in Eve's first twelve samples	263
14. The order of acquisition of 14 grammatical morphemes in three children	271
15. Method of eliciting the voiced plural allomorph	282
